For several years we've been using the theme line AT THE FRONT. In the beginning, those words were written to make a commitment: Harken products will exceed the challenges of the biggest moments in our sport. Over time, we've learned a little more about those moments. They don't always lead to the podium.

This year we launched a photo contest in the USA, designed so customers could show us images of their AT THE FRONT sailing moments. You can see several of the most compelling of those on the cover and on the adjacent page of this catalog. They're wonderful.

Looking at the submissions, we've come to better understand where to find THE FRONT. It's in the eye and in the heart of the beholder.

At Harken, we have something we call our Weather Mark. We rely on it to navigate the company. The third element demands that we, **"Service Your Customers Beyond Their Expectations."** We seek to do that every day. And we're always amazed when given the opportunity, how much our customers return the favor.

Here are all the Weather Mark elements.

- Keep the well-being of your people first.
- Make the best products at a fair price.
- Service your customers beyond their expectations.
- Never lose the basic judgment you've been taught: your sense of right from wrong.

Like any company, Harken evolves. Things change. The Weather Mark will not be one of those, ever.

Good Sailing,

The whole Harken team

Jean Martins

Grand Prix & Tech Service Manager

Harkenite Since 1987

In his more than 32 years with Harken, Jean Martins

has been key in Harken's collaboration with the legends in the world of French offshore racing — more than 50 is his conservative count. They include the giants who created the Vendée Globe race, its first winner, its first two-time winner and multiple winners of the Route du Rhum and the Transat Jacques Vabre.

As technical service manager at Harken France, Jean is responsible for creating layout specifications and assembling price quotes for custom racing projects at the highest performance levels of our sport.

"I like staying at the front of research and development in order to offer our customers the most advanced products — which they should expect," he says. "I also like watching the impressive evolution of their boats. It's great to feel even a small part of what those sailors accomplish."

Away from office, Jean likes to play tennis, hike, bike, and sail.

Harken Materials & Properties

Aluminum

6061-T6: an aluminum alloy that has excellent corrosion resistance to air and salt water. It is an easily welded, tough alloy that responds well to anodizing.

7075-T6: the strongest aluminum alloy with strength comparable to many steels. Harken uses 7075-T6 in its Grand Prix cylinders which are built to handle extremely high loads at minimal weight. A vigorous maintenance schedule is required when using this alloy, because corrosion resistance is lower than 6061-T6. Available in hardcoat or clear-anodized finishes.

Bearings

Bearing properties are functions of contact area, material type, bearing cages, and whether the bearing rolls or slides.

Types

Ball bearings: very low-friction; low/medium-load capacity.

Roller bearings: low-friction; high-load capacity.

Sleeve bearings: medium/high-friction; extremely high-load capacity.

Materials

Stainless steel is stronger than Torlon® thermoplastic and Torlon is stronger than Delrin® acetal resin. Because stainless is heavier and usually higher maintenance, Torlon is used in most high-load applications.

Contact Area

More contact between the bearing and the race increases friction, but also increases load capacity. Balls are loaded on small points, cylindrical rollers are loaded along their length, and sleeve bearings are curved around the shaft so a large portion is in contact. Unlike balls and cylinders, sleeves are not prone to being flattened by extreme or static loads because they already conform to the curvature of the shaft.

Motion (rolling, caged rolling, or sliding)

Sliding bearings (known as sleeve, plain, full-contact, bushing, or journal bearings) are very high strength, but have nothing to reduce friction between contact areas. At most, they have a low-friction sleeve between the surfaces. Rollers and balls avoid almost all of this friction because they do not slide against the race, though they can come in contact with each other. Caged roller bearings are separated from each other to avoid this.

Caged Bearings

Caged bearings are roller bearings held in a cage that keeps them separated from each other and parallel to reduce friction. Caged bearings are used in winches and Black Magic blocks.

Captive Bearings

Captive bearings are ball bearings that are contained so they won't spill during product maintenance. Black Magic blocks have ball bearings held captive by the lip of the sheave. CB traveler cars feature ball bearings held captive by a wire guide.

Carbo

Carbo Air blocks feature lightweight, fiber-reinforced, nylon-resin sideplates with a 60% higher MWL than stainless-reinforced Classic blocks. Lightweight fiber-reinforced Carbo-Cams are ideal for racing where weight is critical. The Carbo name comes from an additive that gives blocks their color and UV-resistance.

Carbon Black

Carbon black is a color additive used in black Delrin ball bearings, block sheaves, and sideplates to protect against UV exposure.

For complete listing, see www.harken.com/glossary

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.
Torlon is a registered trademark of Solvay Advanced Polymers, L.L.C.

Harken Materials & Properties

Clear-Anodized

Clear aluminum anodizing is an electrochemical process that produces a corrosion-resistant finish. It also hardens the surface, making components less prone to scratches and dents. It is “clear” because the protective layer isn’t thick enough to change the color of the component (though dye can be added). More rigorous anodizing, such as hardcoat, can give components a black or colored hue.

Delrin® Acetal Resin

Black (white in older blocks) material which excels in small boat and low to moderate-load applications. Delrin® acetal resin is used for bearings, sheaves, and sideplates.

Hardcoat-Anodized

Hardcoat aluminum anodizing is an electrochemical process that produces a corrosion-resistant finish with hardness characteristics second only to diamonds. Harken’s hardcoating process is twice as thick as black anodizing to provide extra protection against scratches, dents, superficial deformation, and corrosion.

Hard Lube-Anodized

Hard Lube-anodized aluminum includes all the corrosion-resistant properties of hardcoat-anodized aluminum with the additional benefits of a PTFE coating for a smoother surface and reduced friction.

Nylatron® Nylon

Durable, lightweight composite material that has high mechanical strength and stiffness, resists static electricity, and has excellent wear resistance.

PTFE-Coated

PTFE-coating, along with anodizing, protects aluminum against corrosion by sealing the surface from moisture. It also minimizes friction and gives the component better wear resistance.

Stainless Steel

17-4 PH Stainless Steel: this alloy is used in gears because it is hardenable to extremely high strengths. 17-4 PH is more corrosion-resistant than any other standard hardenable stainless steel.

316 Stainless Steel: this is a nonhardenable alloy with high corrosion resistance in freshwater and saltwater.

XM-19 Stainless Steel: this stainless is highly alloyed, with very high mechanical strength and superior corrosion resistance. Rods and pins in Harken cylinders are made of XM-19 stainless.

Titanium

This lightweight, hard metal has the highest strength-to-weight ratio of any metal. Its corrosion rate is so low that after 4000 years in seawater, corrosion would only have penetrated to the thickness of a thin sheet of paper. Harken uses titanium rollers in V blocks to handle bearing loads.

Torlon® Thermoplastic

Exceptionally strong crush/impact-resistant bearing material that withstands heavy long-term use and shock loading. Most Harken hardware that sees extreme loads uses greenish-brown Torlon® bearings.

UV-Stabilized

UV light photo-degrades composites by breaking their chemical bonds, leaving them weak, brittle, and discolored. This is common in equipment with white bearings. All Harken composites and bearings are naturally UV-resistant or use stabilizers like carbon black.

Hardcoat-anodized

Clear-anodized

6061-T6 Aluminum Anodizing Thickness

Page 33

Fly Blocks

Harken soft-attach Fly blocks are designed to provide strength without mass, providing sailors with big power in a low-aero package. Designed specifically for high-tech line, these efficient blocks have an incredible working load for their small size. Fly blocks are perfect for use on foiling dinghies and sportboats and for vang cascades and backstay systems on Grand-Prix racers.

18 mm

18 mm blocks feature an integrated stainless steel inner race and rivet, stainless steel ball bearings, and composite fiber-reinforced sideplates.

29 & 40 mm

29 and 40 mm blocks feature a one-piece titanium outer race/sheave, stainless steel ball bearings and inner race, and composite fiber-reinforced sideplates.

Fly Blocks

TECH TEAM

Use the 2161 "tight cinching" 18 mm in applications where the block needs to be secured extremely close to the deck.

CARBO AIR BLOCKS

Which Block
Do I Need?

These smooth-running powerful performers make trimming easy, no matter how hard the wind blows. Carbo Air blocks are made of tough reinforced composite in a size and style to fit any system: singles, doubles, triples, quads, and quints; ratchets and fiddles; soft and hard attach; 18 - 75 mm. Perfect for main, jib and spinnaker sheets on dinghies and sportboats; control lines on boats of all sizes.

High-strength, lightweight

- Lightweight, strong and reliable fiber-reinforced composite construction.
- Open Air block design eliminates unnecessary material to reduce weight.

Stands up to sun, salt, and time

- Ball bearings, sheave, and sideplates are UV-stabilized.

Low-friction efficiency for fast trim and release

- Free-running ball bearings roll on curved races, efficiently dispersing load for a higher strength block.

Materials

For properties
see pages 16-17.

**Delrin®
acetal resin,
UV-stabilized:**
Ball bearings

Carbo composite:
Sideplates, sheave

Cam-Lock

U-Lock

Shackle blocks lock in two directions or swivel to keep line from twisting

- Cam-Lock or U-Lock allows shackle to be fixed or to swivel.

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.

Carbo T2 Soft-Attach Blocks

Harken offers these patented, high-strength, soft-attach blocks in 29 to 57 mm sizes. They feature composite sheaves that spin freely on Delrin® ball bearings with curved bearing races. They have no metal shackles or rivets, making them the lightest soft-attach blocks Harken has ever designed.

All T2 blocks are lashed or spliced through the load-bearing center of the block, decreasing the loads on the sideplates and acting as a safety backup for the system.

T2 Blocks

T2 blocks come in single and double configurations and can be tied, spliced, or lashed to almost anything. T2 doubles feature composite line guides that are integrated into the block head. They keep the block aligned correctly by pushing the lashing line to the outer edges of the block's head.

T2 Loop Blocks

The T2 Loop block's on/off loop system slides through the block head and over the anchor post for a secure connection. A SK75 Dyneema® loop is included. Replacement loops available.

T2 Ratchamatic Blocks

The patented T2 Ratchamatic is Harken's newest block to feature the T2 line's styling and soft-attachment system. Pressure on the line engages the ratchet mechanism, which switches seamlessly from free-running to ratchet mode. Unloaded main and jib sheets run out freely during mark roundings, and asymmetrical spinnaker sheets free instantly during jibes.

The weight of this high-strength block is only a few ounces. This is thanks to composite fiber-reinforced sideplates, hardcoat-anodized aluminum sheave, a lightweight soft-attach, and a minimum of moving parts in the ratcheting mechanism.

A length of Spectra® line with a polyester cover is included.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.
Dyneema is a registered trademark of DSM IP Assets B.V. L.L.C.
Spectra is a registered trademark of Honeywell International, Inc.

T2 block with open center
Line ties, splices, or lashes to almost anything: cascades, bridles, traveler controls.

T2 Loop block with anchor post
Loops deadend on anchor post for easy installation. No knots or splices needed. Slide the loop through the head and over the anchor post for a secure connection.

T2 Ratchamatic block
Blocks are clearly labeled with high-contrast directional markers for correct reeving and trimming direction.

57 mm T2 Ratchamatic blocks are also available with Power3 sheaves which offer holding power options suitable for a variety of wind conditions. Contact Harken for more information.

High-strength pivoting lead blocks with cams are used for halyard controls on larger keelboats and as "headknockers" on dinghies and beachcats for sheeting directly from the boom. Hole spacing and rivet size are the same as Classic models, making upgrades easy. Cam reverses for either up or down cleating.

Ratchamatic HTE Blocks

The spring on the HTE (high-threshold engage) version of the 57 mm Carbo Ratchamatic blocks was made stiffer to delay the point where the ratchet engages, allowing the block to run free more of the time. The ratchet function engages at higher loads to allow the old kite sheet to run free for crisper gybes.

Ratchet vs
Ratchamatic

Pressure on the line engages the ratchet mechanism, which switches seamlessly from free-running to ratchet mode.

Power3 Ratchet Blocks

Power3 ratchet blocks provide sailors that race small one-designs with three holding-power options to handle a variety of wind and sea conditions. More choices allow sailors to fine-tune their set-ups in tandem with the purchase that provides the ideal level of power, responsiveness and grip.

Standard grip: medium/light air

1.5x grip: breeze-on/puffs

2x grip: big breeze/steady

Standard grip:
black

1.5x grip:
titanium

2x grip:
silver

Ratchet Blocks

Carbo ratchet blocks allow sailors to hand-hold loaded lines and offer balance between holding power and controlled easing.

Nylon-resin sideplates are densely packed with long-glass fibers for a compact block with a high strength-to-weight ratio. Machined aluminum sheaves are Hard Lube-anodized for strength and corrosion resistance. Eight facets hold line securely. Ball bearings, sheave, and sideplates are UV-stabilized with carbon black for maximum protection.

40 mm

The 40 mm ratchets are ideal for jib sheets and spinnakers where size and weight are critical. The 2608, 2609, and 2614 have on/off switches; other 40 mm ratchets are always in ratchet mode.

57 mm and 75 mm

The 57 mm and 75 mm switchable ratchets provide precise control with an accessible on/off switch that is easy-to-operate from both sides of the block.

For the ultimate system, mount a switchable ratchet in the cockpit and a boom-mounted Ratchamatic block directly above for double holding power in heavy air and a free-running mainsheet when it's light. The 75 mm provides up to 15:1 holding power; the 57 mm 10:1.

About Carbo Air blocks: see feature page at beginning of this section.

Ratchamatic Blocks

The Carbo Ratchamatic is a load-sensing ratchet block that rolls freely in both directions under low loads and automatically engages the ratchet as loads increase. Shifting between ratchet and light-air modes is seamless. Unloaded main and jib sheets run out freely during mark roundings and asymmetrical spinnakers free instantly during jibes.

Ratchet engagement may be adjusted to a higher or lower load according to strength and sailing style. The Ratchamatic cheek block mounts on either port or starboard. The holding power of the 57 mm is as high as 10:1. The 75 mm is up to 15:1.

For the ultimate system, mount a Ratchamatic block on the boom above a cockpit-mounted switchable ratchet to allow the mainsheet to run freely in light air and to double holding power in heavy air.

Use the 2634 with a 402 or 403 swivel arm for a versatile two-speed mainsheet system.

Ratchet or
Ratchamatic?

Adjustable ratchet engagement adapts block to a variety of applications.

Eight-faceted, Hard Lube-anodized aluminum sheave holds line securely.

All 57 mm and 75 mm Ratchamatic blocks are also available with Power3 sheaves which offer holding power options suitable for a variety of wind conditions. In addition, all 57 mm Ratchamatic blocks can be made with HTE (high threshold engage) sheaves to delay ratchet engagement, allowing them to run freely more of the time. Contact Harken for more information.

Carbo Fiddle Blocks

The Carbo fiddle block line features high-load ball bearings with fitted races for low-friction operation. The 40 mm fiddle is an excellent choice for 3:1 and 4:1 tackles on dinghy vang and mainsheets, as well as for controls such as cunninghams and internal boom outhauls on larger boats.

The 57 mm fiddle features the Cam-Lock locking system. The switch allows the shackle to lock at 90-degree intervals or to swivel freely.

Ratchet Blocks

The 57 and 75 mm switchable ratchet blocks provide precise on/off control with accessible, easy-to-operate on/off switches on both sides of the block.

About Carbo Air blocks: see feature page at beginning of this section.

All 57 mm and 75 mm ratchet blocks are also available with Power3 sheaves which offer holding power options suitable for a variety of wind conditions. Contact Harken for more information.

*Maximum working loads and breaking loads for blocks based on cam strengths.

Small Boat 57 & 75 mm Flip-Flop Blocks

Small Boat Flip-Flop blocks pivot around the line axis to keep line close to the deck. Hinged construction allows a variety of lead angles.

Lightweight, machined 6061-T6 aluminum cheeks pivot on fiber-reinforced plastic chocks. Sheave runs exclusively on a ball bearing system for fast trim and release under any load. Ball bearings, sheave, and sideplates are UV-stabilized with carbon black for maximum protection.

Ratchamatic block versions roll freely in both directions under low loads and automatically engage a ratchet mechanism as loads increase, giving sailors a holding power of up to 15:1. The ratchet engagement can be adjusted to a higher or lower load depending on the sailor's strength, sailing style and system usage.

Reversible cam arms adjust and lock in a range of positions for crew accessibility and accommodation of changing lead angles.

Block pivots around the line axis to keep line entry height low.

All 57 mm and 75 mm Ratchamatic blocks are also available with Power3 sheaves which offer holding power options suitable for a variety of wind conditions. In addition, all 57 mm Ratchamatic blocks can be made with HTE (high threshold engagement) sheaves to delay ratchet engagement, allowing them to run freely more of the time. Contact Harken for more information.

Dinghy Vang

The dinghy vang features 16 mm sheaves with stainless ball bearing for high loads. The assembly includes a 468 Micro Cam-Matic® cleat that allows precise trimming. It's easy to cleat because it pivots for a fair lead. The unit connects to a mast bracket with a 1/4" pin. The system provides a 12:1 purchase when cascaded with 4:1 blocks. The vang lower unit is available by itself or as part of a kit, which includes a 16 mm double block cascaded to a Micro single with becket for the vang purchase, plus a Micro single for attaching the cunningham.

Protexit™ Blocks

When you race HARD, and you rip through as many hoists and douses as we do sailing W-L legs all the time, you should expect to start wearing through the sideplates of your halyard exit block right? Wrong! Thanks to Harken Protexit™ blocks, wear from side angle loading is not inevitable. Protexit's all-aluminum, wear-resistant housing carefully ushers line in and out no matter the angle. There's more: Protexit blocks offer higher working loads than any small boat exit blocks we've ever made. Protexit aluminum sheaves rotate on sleeve bearings with Delrin® sideload balls so they don't deform in extreme conditions, while reducing wear on the halyard, too.

Strong. Durable. Gentle. Protexit blocks protect the race results you work hard to achieve.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.

Blocks are clearly labeled with part number, line diameter, maximum working load, and directional arrows for line direction.

16 mm

The 16 mm is Harken's smallest block. It is perfect for small synthetic control lines found on high-tech dinghies.

The bearing system uses stainless steel balls in a captive grooved race and has a 113 kg (250 lb) maximum working load—the highest on the market compared to similarly sized blocks.

The 442 uses a spacer and the 404 uses an O-ring to keep the line in the sheave during intermittent loading.

The 467 and 484 use a narrow sheave for extremely small control lines and have a ferrule head for soft attachments. They use the same high load ball system. The 484 features a bronze sheave for added durability.

Use for:

Dinghy control lines	Spinnaker pole trip lines
Big Boat leech lines	Outhauls
Downhauls	Cunninghams
Traveler controls	Halyards on prams

Hardened stainless steel inner race for maximum strength-to-weight ratio.

Micro Blocks

Low-friction Micro blocks are compact and lightweight. They are ideal for sailboards, smaller dinghies, and lightly loaded control lines on boats of all sizes.

Micro block sheaves run exclusively on ball bearing systems for fast trim and release under any load. Delrin® ball bearings are UV-stabilized with carbon black for maximum protection. Stainless steel sideplates add strength.

Use for:

Cunninghams/outhauls
Vangs
Traveler controls
Barberhauls
Flag halyards
Leech cords
Lead car return tackles

CLASSIC BLOCKS

Which Block
Do I Need?

The timeless styling of our Classic block line enhances your boat's traditional look. Strong, dependable and exceptionally free-running, these compact blocks are the foundation of the Harken block line. We offer them in multiple configurations for dinghies, scows, beachcats, iceboats, and small offshore racers and cruisers.

Corrosion-resistant, maintain beauty and strength over time

- Ball bearings, sheave, and sideplates are UV-stabilized.
- Corrosion-resistant stainless steel straps reinforce blocks.

Fast trim and release under load

- Free-running ball bearings roll on flat races with minimal friction.

Materials
For properties
see pages 16-17.

Delrin®
UV-stabilized:
Ball bearings

**316 Stainless
steel:**
Sideplate straps

Shackle blocks lock in two directions or swivel to keep line from twisting

- Set screw allows shackle to be fixed or to swivel.

Bullet Blocks

Low-friction Bullet blocks lead control lines aft. They are compact and lightweight, with fast trim and release under high or low loads. A range of styles lets these blocks adapt to almost all control line applications.

Wire Bullet blocks use roller bearings to carry higher loads and feature Hard Lube-anodized aluminum sheaves for strength and corrosion resistance. Mast exit blocks with cams are used for halyard controls and under boom mainsheets.

About Classic blocks: see feature page at beginning of this section.

The complete line of Small Boat Classic blocks is available through Harken dealers worldwide and online at www.harken.com/classic

GP Catamaran Ceramic Mainsheet Systems

10:1, 11:1, 12:1 configurations in a single package

Harken's Grand-Prix mainsheet systems are critically important options for high-performance beachcats like the Nacra 17 or F18s. The high-efficiency blocks making up these systems feature insert-molded ceramic bearings that almost eliminate rolling resistance, greatly improving power transfer to the crew for easy, precise trimming. These compact blocks feature hardcoat-anodized sideplates that envelop composite sheaves for easy disassembly/reassembly. The system profile is the lowest on the market by far. High-performance fairing increases aerodynamic flow and protects the crew and blocks from impact damage. The lower block features a built-in cam arm that infinitely adjusts by loosening two (2) screws with a hex key. A single ratchet sheave in the bottom block ensures release is controlled and smooth. A snap shackle attaches the block to the boom. A swivel shackle attaches to the traveler.

Note: the GP mainsheet system is delivered as a 12:1 mainsheet system, but can be easily reconfigured as a 10:1 or an 11:1 to align with wind or crew preference. All necessary parts and reeving instructions are included. Line not included.

Two-Speed Mainsheet Systems

Harken gross-trim/fine-tune mainsheet systems are easy to install and use. These optimized systems decrease overall line clutter because they use less line than traditional gross-trim/fine-tune systems. For fast trimming, pull both tails of the mainsheet. To fine-tune or to trim using a higher purchase, pull a single tail.

Two-speed mainsheet systems come in three configurations for boats from 6.5 m to 11.8 m (22 - 39'), with mains as large as 32.4 m² (350 ft²).

Systems

Ordering Midrange Blocks

1. Determine block size and type

The tables below are guidelines for typical applications. Additional rigging tips are available at <http://www.harken.com>.

2. Contact

If you have questions, please contact your dealer or Harken Technical Service.

Note: Multihulls and heavy displacement monohulls should reduce the maximum sail areas shown by as much as 25%.

Mainsheet

The farther forward a mainsheet system is on the boom, the higher the loads. Systems with multiple attachment points spread the load over the boom. Use the table to determine if Midrange blocks are strong enough for your mainsail area. See pages 262 - 264 for common configurations.

Mainsheet

		Maximum mainsail area (P x E x .5 x 1.1*)	
		ft ²	m ²
End-boom system	Single attachment	500	46
	Multiple attachment†	540	50
Mid-boom system	Single attachment	425	39
	Multiple attachment†	500	46

*Assumes 10% roach. †Assumes two or more shackles share load on both boom and deck.

Genoa Footblocks

Determine the area of your foretriangle and how many degrees the footblock will deflect the line to select footblock size. For system loading details, see the **Block Loading vs. Angle of Deflection** and **Genoa System Loading** sections on page 279. See page 259 for common configurations.

Genoa Footblocks

	Maximum 100% foretriangle sail area at 35 knots (I x J x .5)	
	ft ²	m ²
180° turn	150	14
90° turn	215	20

Spinnaker: Symmetrical/Asymmetrical

Use the spinnaker's sail area to determine what size Midrange or high-load Midrange blocks to use for the sheet and afterguy controls. See page 269 for common configurations.

Spinnaker

		Maximum spinnaker area (P x E x .5 x 1.8)			
		Standard		High-load	
Sheet		ft ²	m ²	ft ²	m ²
		1100	100	1300	120
Afterguy*	Plain	900	83	—	—
	Ratchet	900	83	—	—
	Mounted amidships	1100	100	1250	115
Afterguy*	Mounted on transom	900	83	1000	93
		Maximum "I" dimension			
Masthead halyard		48	14.6	53	16

*Assumes maximum deflection of 45°.

Mastbase Lead Blocks

Attach blocks to padeyes or 1634 Midrange ESP stand-up bases, or mount mastbase halyard leads to the deck. Use mainsail luff length and foretriangle height to determine what size Midrange or high-load Midrange blocks to use. Carbo blocks or 1986 mastbase halyard leads may be appropriate for applications with lower loads. See page 268 for common configurations.

Mastbase Lead Blocks

	Standard		High-load	
	ft	m	ft	m
Main halyard lead	Maximum "P" dimension			
	48	14.6	52	15.8
Genoa halyard lead	Maximum "I" dimension			
	46	14	50	15.3
Spinnaker halyard lead	Maximum "I" dimension			
	48	14.6	53	16

Running Backstays

The table below shows if Midrange or high-load Midrange blocks are strong enough for the backstay, based on the breaking strength of the runner wire.

Running Backstays

	Maximum breaking load of runner wire			
	Standard		High-load	
2:1 flying blocks	lb	kg	lb	kg
1:1 afterguy deck	2200	998	2800	1270
2:1 afterguy becket deck	3600	1633	3600	1633
2:1 afterguy single deck	4500	2040	5000	2268

Vang

See page 265 for common configurations.

Vang

	Maximum mainsail area (P x E x .5 x 1.1*)	
	ft ²	m ²
Fiddle	400	37
Triple	450	42

*Assumes 10% roach.

Midrange Blocks

About Classic blocks: see feature page at beginning of this section.

STANDARD

HEXARATCHET

Hexaratchet blocks

Midrange Hexaratchet blocks grip loaded sheets, yet allow sailors to ease and trim quickly and with complete control. A switch on the side engages and disengages the ratchet mechanism.

Eight-sided aluminum sheave for 10:1 or 15:1 holding power with 180° wrap.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

*6 mm (1/4") RH fasteners. **High-load Midrange blocks use Torlon® ball bearings.

Line/Wire High Strength Blocks

Lightweight, low-friction wire blocks carry wire halyards and high-strength control lines on boats of all sizes.

High-load composite bearings carry axial loads.
Hard Lube-anodized sheave for strength and corrosion resistance.

25 mm (1") wire blocks use low-friction thrust washers.
38 mm (1.5") and 51 mm (2") wire blocks feature sideload balls between the sheave and the sideplate to minimize friction from unfair leads.

466 features a forkhead and becket making it useful for vang, halyards and control lines.

Use for:

Wire halyards
Vangs
Control lines

300
304
308

466

High-load composite bearings handle wire and high-strength line.

Sideplates rotate to insert preswaged/Nico-pressed wire fittings.

Ordering Big Boat Blocks

1. Determine block size and type

The tables below are a guideline for typical applications. Additional rigging tips are available at <http://www.harken.com>.

2. Contact

If you have any questions, please contact your dealer or Harken Technical Service.

Note: These hardware specifications assume a boat of moderate displacement sailing in normal conditions. Ultralight displacement boats (ULDB) may use smaller hardware. Heavy displacement boats and multihulls often require stronger hardware.

Mainsheet

Mainsheets are usually attached near the end or the middle of the boom, depending on accessibility and whether the boat is used for racing or cruising. The farther forward a mainsheet system is on the boom, the higher the loads it sees. Systems with multiple attachment points spread the load over the boom. Use the table to choose the appropriate Black Magic, Element, or stainless steel blocks for your mainsail area. See pages 262-264 for common configurations.

	Maximum mainsail area (P x E x .5 x 1.1*)													
	45 mm Element* 57 mm low-load Black Magic		60 mm Element* 57 mm high-load Black Magic		75 mm low-load Black Magic/ 75 mm ESP		80 mm Element* 75 mm high-load Black Magic/ 75 mm stainless		100 mm Black Magic/ 100 mm stainless		125 mm Black Magic		150 mm Black Magic/ 150 mm stainless

Mid-boom														
Single attachment	400	37	400	37	450	42	550	51	700	65	1000	93	1375	128
Multiple attachment**	450	41	575	53	600	56	700	65	950	88	1300	121	1525	142

*Element blocks are appropriate for most cruising boats. For high-performance boats, choose Black Magic blocks.

**Assumes 10% roach. †Assumes two or more shackles share load on both boom and deck.

Running Backstays

Crews use running backstays to adjust mast bend for different wind conditions. This controls headsail sag as well as the camber (depth) of the mainsail. Use Black Magic Air Runner blocks with higher breaking strengths than your runner wire.

	Maximum breaking load of runner wire									
	57 mm Black Magic Air Runner		75 mm Black Magic Air Runner		100 mm Black Magic Air Runner		125 mm Black Magic Air Runner		150 mm Black Magic Air Runner

Mastbase Lead Blocks

Leading halyards and control lines aft allows crews to raise and lower sails or make tuning adjustments from the cockpit. Attach blocks to the mast collar post or padeyes, or mount mastbase halyard leads to the deck. The table below sizes Black Magic, ESP, stainless steel, and mastbase blocks for different foretriangle heights and luff lengths. See page 268 for common configurations.

	45 mm Element* 57 mm low-load Black Magic/ESP		60 mm Element* 57 mm high-load Black Magic/ fixed MBL** blocks		75 mm low-load Black Magic/ Mast collar post block/ 75 mm ESP		80 mm Element* 75 mm high-load Black Magic/fixed MBL** blocks/ 75 mm stainless		100 mm Black Magic/ 100 mm stainless		125 mm Black Magic

ELEMENT BLOCKS

Harken
Element Block

When Harken sets out to create a block for sailors who have always believed they didn't need Harken, what happens? The new Element block. The name hints at its essence: everything that doesn't contribute durability or strength is stripped away. The result is an economical block that does a Harken job.

Element blocks introduce sideplates that combine forged aluminum and compound curves for strength. They are simultaneously contemporary and very robust. Element's design pairs the minimum amount of metal required to protect the sheave with a proven journal bearing. So size for size, Element is priced significantly lower, than our previously least expensive blocks. Compare them to plain bearing blocks from competitors, you'll be surprised. Element: Harken design and engineering—value-price.

Element blocks accept line from 8 - 16 mm. They are offered in singles, doubles, triples, fiddles, and footblocks in 45, 60 and 80 mm sizes.

Stands up to sun, salt, and impact

- Aluminum sideplates are forged for strength and sheave protection.
- Sideplates are hardcoat-anodized to resist corrosion.
- Bearing sheave of tough composite resists corrosion for a long service life.
- Shackles are strong, corrosion-resistant stainless steel.

Materials

For properties
see pages 16-17.

6061-T6 aluminum:
Hardcoat-anodized
sideplates

Shackle blocks lock in two directions or swivel to keep line from twisting

- Removable headpost lock allows shackle to be fixed or to swivel.

BLACK MAGIC AIR BLOCKS

Black Magic Air blocks are a top favorite of Big Boat performance racers and cruisers. These lightweight, free-running, powerful performers are used for sail controls that see lots of action: mainsheet, runner, halyard, and spinnaker systems. Offered in 57 - 150 mm sizes, with low-load versions in 57 and 75 mm ranges.

High-strength, lightweight

- Aluminum sheaves and sideplates.
- CNC sculpted for optimal strength-to-weight.

Stands up to sun, salt, and time

- Sideplates and sheaves Hard Lube-anodized for maximum UV protection and a smooth surface.
- Dissimilar metals isolated to prevent corrosion.

Caged vs. Uncaged Rollers

Low-friction efficiency for fast trim and release

- Center cage keeps Torlon® roller bearings separated and parallel to reduce friction.
- Captive Delrin® ball bearings carry side loads.

Which Block do I need?

Shackle blocks lock in two directions or swivel to keep line from twisting

- Set screw allows shackle to be fixed or to swivel.

Soft-attach options

- Loop or lash through sheave center instead of block head.
- Sheave center carries primary load, allowing a smaller, lighter weight block.

Soft-attach options

- Patented Loop blocks have a removable dead end post for attachment to a padeye.

6061-T6 aluminum:
Hard Lube-anodized sideplates, sheave

Delrin UV-stabilized:
Ball bearings

Easy maintenance

- Quick disassembly with hex wrench; minimal number of fasteners; no loose balls or rollers.

Torlon:
Caged roller bearings

Materials
For properties see pages 16-17.

Air Runner Blocks

Runners are used on running backstays of offshore boats to adjust mast bend for different wind conditions.

Integrated sideplate bails and recessed cotter key help produce a smooth design that won't snag lifelines.

Foam padded Block Socks easily install over Air Runner blocks to protect your blocks, deck, and crew.

Crossover Blocks

Crossover blocks provide a cleaner, more efficient deck. These easy-to-install blocks mount behind the stopper bank on each side of the cabin house and can route any line to the winch on the opposite side. Blocks feature built-in risers and sculpted backing plates. The large, strong bases protect cored decks. Use the 1984 for boats to 11.5 m (38') and the 1981 for boats to 15 m (48').

Teardrop Blocks

Teardrop blocks are ideal as masthead leads and in other applications where limited articulation or direct attachment is desired. When attached to a compatible padeye, teardrop blocks will not hit the deck when lines are slack, but allow enough movement to ensure fairleads when jumping halyards. They are often used on permanent backstays of fractionally rigged boats where the backstay can be spliced directly to the head of the block.

FlatWinder Powered Block

The Harken FlatWinder powered block is a self-contained, low-profile electrically-powered system for mainsheet traveler adjustment. This powerful block is easy to use and offers sailors huge benefits in mainsail control, giving them the means to quickly depower the rig, and delay reefing when the wind picks up. Like a compact captive winch for the traveler, the FlatWinder is completely self-contained. It operates in both directions allowing the car to move anywhere on the track while also keeping the traveler line off the cockpit floor. Harken recommends installing two space-saving, dual-function Digital System Switches, one button to port, the other to starboard, for activation from both sides of the boat. The block's wide-diameter drive sheave mounts on a sloped base, forming an angle with the sheave top to contain the line so it doesn't push against the block walls. This progressive grip exerts just the right amount of friction to keep wear on the line and components minimal. Plus, the FlatWinder eliminates the need for winches, making the deck cleaner and easier to navigate.

The compact horizontal motor is housed neatly belowdeck and has a maximum working load of 250/500 kg (550/1100 lb). When used with 10 mm line and a 4:1 purchase, this translates into around 1000 kg (2205 lb) of pull with the FlatWinder 250; 2000 kg (4410 lb) with the FlatWinder 500.

A Harken Dual-Function Control Box is included. This integrated load controller and control box conserves space, and with half as many wires as separate systems, is easier to install.

The FlatWinder 250 fits monohulls 15 - 18 m (50 - 60') and catamarans 14 - 15 m (45 - 50'); the FlatWinder 500 fits monohulls 18 - 24 m (60 - 80') and catamarans 15 - 20 m (50 - 70'). It is available in 12V or 24V depending on the boat's electrical system. Switches and circuit breakers are not included.

*Lockoffs are intended to hold lines temporarily and should not be used in place of line stoppers or clutches.

‡If double stacked, upper block/organizer is two-thirds of listed MWL and breaking load.

Megayacht Blocks

Harken Megayacht blocks have an ultralight composite bearing system (ULC) that rides on a heat-treated stainless steel inner race to handle extremely high loads. Snap-fit Torlon® ball bearings carry thrust loads. Sideplates are mirror-polished stainless steel to reflect the traditional beauty of a classic yacht, or hardcoat-anodized 6061-T6 aluminum for strength and corrosion resistance—perfect for performance yachts.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Mastbase Halyard Lead Blocks

Fixed Mastbase Leads

Low-profile mastbase halyard lead blocks are lightweight and can be grouped in a small area at the mastbase. Flared cheeks prevent chafe on the halyards.

The high-load bearing system has a PTFE composite bushing and sideload balls. The sheave is hardcoat-anodized aluminum for additional strength.

Teardrop Mast Collar Blocks

These teardrop mast collar blocks coordinate well with any Harken blocks in a deck layout. Sheaves feature sleeve bearings to handle high static loads and are ideal for halyards. Use the blocks for direct attachment to padeyes, mast collar posts, perforated mast collars, or in mastbase situations where leads might change.

Over-the-Top Blocks

Over-the-top blocks lead lines aft over cabin houses, coamings, and splashguards. They feature high-load sheaves and come in single, double, and triple configurations.

Part No.	Description	Sheave Ø		Width		Length		Height		Weight		Max line Ø		Maximum working load		Breaking load		Fasteners required

Flip-Flop Blocks

Low-profile Flip-Flop blocks are lightweight and can be used for various leads on your boat including halyard, mainsheet, and spinnaker sheet leads. The Flip-Flop block has aluminum hardcoat-anodized sideplates and features Hard Lube-anodized aluminum sheaves for strength and corrosion resistance.

High-load Flip-Flop blocks pivot around the line axis to keep line close to the deck. Hinged construction allows variable leads. Lockoff provides a temporary stop to free up winches.

High-Load Snatch Blocks

These multipurpose blocks are a must on racing yachts of all sizes. Opening sideplates make them easy to deploy, allowing crew to quickly fasten them wherever needed—perfect for temporary leads, line deflection, and static line functions requiring small adjustments. A strop soft-attach is fixed on one side, but is easily removable on the other. The strop carries the block's primary load and articulates for a fair lead. The Velcro® strap is permanently attached to one sideplate and holds the block securely closed when sideplates are aligned—even under the highest loads. The strap has a broad reflective tab for easier operation with gloves.

Harken composite bearing technology (ULC) ensures sheaves turn smoothly and maintain efficiency under extreme loading. Snap-fit Teflon® bearings carry sideloads. An integral headspacer prevents Hard Lube-anodized aluminum sideplates from deflecting and binding. The wide sheave allows a range of line diameters.

Teflon is a registered trademark of Solvay Advanced Polymers L.L.C.
Velcro is a registered trademark of Velcro Industries B.V.I.

Ladykiller, ClubSwan 50, 15.24 m (50'), Nautor's Swan, naval architect: Juan Kouyoumdjian © Studio Borlenghi

Sideplate rotates open allowing rigged line to be loaded into block.

A fixed Velcro strap keeps sideplates aligned and securely closed under high loads.

V Blocks

The V block delivers another breakthrough in Harken's loop block series for Grand-Prix racers. Harken engineers have simplified the mechanics by combining the axial and thrust bearings into a single bearing set of V-shaped titanium rollers. The result is a strong, lightweight block that offers unmatched efficiency at high loads, while spinning freely at low loads for smooth easing in light air.

Harken V blocks feature titanium sheaves and captive titanium roller bearings, and are available with either 3D-molded carbon or anodized aluminum sideplates. V blocks are easy to disassemble for inspection and maintenance.

Loop or lash through sheave center instead of block head. Sheave carries primary load, allowing a smaller, lighter weight block.

The V block
What's Inside?

V blocks are named for the unique V-shaped angled rollers that handle both axial and thrust loads.

Designed for easy maintenance, blocks have captive rollers and minimal components; quick disassembly with a hex wrench.

Drew Kosmoski Mechanical Engineer

Harken Since 2011

A typical day for Harken custom engineer Drew Kosmoski begins with

an early email check to see if customers — many European — need his help. He tries to respond before the end of their workday. He then designs, inspects new parts in Harken's custom machine shop to assure they are shipment-ready and evaluates equipment in Harken's Pewaukee test lab.

Drew, who has been with Harken since 2011, says one of the perks of his job is being able to get out of the office and see what he's designed, in use.

"I've been able to go to the America's Cup in San Francisco, a Volvo stopover, as well as Megayacht regattas in Spain and Italy," he says. "I've also been challenged while working on the V block line, as well as parts for the J Class yachts like *Svea* and *Hanuman*. It's also been interesting working on Harken Industrial's large oceanographic research blocks."

A big part of Drew's job is developing tests for Harken products (often, breaking them) to make sure they withstand required loads.

Drew is a sailor. When he's not on the water you'll find him behind the wheel of his Porsche or off-roading in his Jeep.

BALL BEARING CAM CLEATS

Multiple rows of high-load ball bearings and precise V-shape reduce friction, allowing Harken cam cleats to activate with the snap of the wrist. No need for draw-through cleating: a downward flick snaps the sheet into the cam and stays exactly where you put it. Flick up and the cleat releases instantly, even under high loads. Harken cleats are the only cleats that engage under maximum line tension.

Cams engage/release loaded line instantly for precise sail control

- Multiple rows of UV-stabilized ball bearings reduce friction.
- Cam horns and V-shape for easy line entry.

Three sizes in lightweight, wear-resistant materials

- Micro, standard, offshore sizes.
- Cam-Matic: Hard Lube-anodized aluminum, or mirror-polished stainless steel.
- Carbo-Cam: UV-stabilized fiber-reinforced Carbo composite.

**Rebuild your
Harken 150
Cam-Matic®
Cam Cleat**

Protective tooth design holds line securely

- Rounded teeth reduce line wear, squeezing rather than cutting the line.
- Each line size held by the most number of teeth.

Full range of accessories

- Flairleads, fairleads, adapter plate, wedge kits, risers, and bases.

Cam Cleet Accessories

Use these accessories to adapt our cleats for many applications, such as cleaning up cockpit controls with color-coding or leading a line cleanly to a cleat.

The 475 Micro Cam-Matic cleat and 298 wire fairleads guide line into the entrance side of the cleat, maintaining a low profile and holding line close to the cleat.

Use the 475 with the 468 and 471 Micro Cam-Matic cleats. Use the 298 wire fairlead with the 150 Cam-Matic and 365 Carbo-Cam cleats.

The 494 and 495 Fast Release Fairleads feature low-friction, angled stainless steel line guides on the exit side of the cleat. The angled lead keeps the line away from the cam to eliminate unexpected recleats during maneuvers. Use for fast spinnaker take-downs during mark roundings—anywhere fast release is crucial. Harken Cam-Matic Fairleads are made of tough, abrasion-resistant composite.

Use the 495 with 468 and 471 Micro Cam-Matic cleats; the 494 fairlead with the 150 Cam-Matic and 365 Carbo-Cam cleats.

The 375 X-Treme Angle Fairlead uses low-friction stainless steel line guides on the exit side of the cleat. This allows crew to release and recleat at angles up to 90 degrees to the cleat without centering the line. Perfect for cabintop controls and adjusting deck cleats from the rail. A must for fine-tuning Laser outhaul and cunningham controls. Harken Cam-Matic Fairleads are made of tough, abrasion-resistant composite. Use the 476 X-Treme Angle Fairlead with the 468 and 471 Micro Cam-Matic cleats; the 375 X-Treme Angle Fairlead with the 150 Cam-Matic and 365 Carbo-Cam cleats.

The 424 and 425 low-profile, top-mounted Fairleads can also be used to guide lines. They feature stainless wearguards and are available in various colors for color coding cams. Use the 424 with the 468 and 471 Micro Cam-Matic cleats. Use the 425 with the 150 Cam-Matic and 365 Carbo-Cam cleats.

Wedge kits and risers improve the angle of your cams. A range of eyestraps holds line at the cleat and provides fair leads.

Cleat and uncleat at angles up to 90 degrees.

Stainless steel loop provides low-friction turning post.

Base plate ensures optimal cleating height.

Ideal for Laser outhaul/cunningham controls.

Lightweight, fiber-reinforced Flairleads feature stainless wearguards for long life and are available in various colors for color-coding cams.

The 438 adapter plate is perfect for use on masts and booms. It raises the cleat off the mast to improve the cleating angle and control.

Cam Bases

Use cam swivel bases when leads must rotate to face the trimmer.

Ball bearing swivel bases feature dual rows of Delrin® ball bearings that swivel freely even under high loads. Bases include stand-up springs and a U-Adaptor to accept a variety of appropriate blocks.

The 144 is the standard configuration with a tall arm. It is ideal for mounting in the cockpit or for use on larger keelboats and small offshore boats that use 76 mm (3") plastic blocks. The low-profile 205 is used when installation is at deck level and when smaller blocks are used. The 1574 accepts Midrange blocks.

The 216 features a second cleat for lines led vertically through the base of the swivel. It is frequently used to combine vang or backstay controls in the same swivel base that handles the mainsheet.

The 240, 241 and 639 are simple swivel bases for main and jib sheets on very small boats or for control lines on boats of all sizes.

The 402 and 403 are fitted with a double Cam-Matic cleat for use in 2-speed mainsheet systems.

The 462 swivel base with 468 Micro Cam-Matic cleat provides precise cleating. The 16 mm sheaves feature low-friction stainless steel ball bearings to handle high loads, ideal for controls where cleating angles change dramatically. The HSB538 has a 471 Micro Carbo-Cam cleat, and is equipped with a bullseye fairlead instead of sheaves.

Cam-Matic ball bearing cam cleats.

Swivels freely under load.

Stops on base prevent swivel from over-rotating and fouling line.

144 includes adapter for 57 mm and 75 mm Carbo blocks.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.

Stand-Up Bases

Stand-up bases allow a wide variety of blocks to be held upright, swivel freely, or pivot so lines have a fair lead under load.

Ball-and-Socket Swivel Bases

The ball-and-socket design lets blocks articulate up to 45 degrees and swivel freely. The 460 and 461 bases have stainless steel reinforcement plates to handle the high load capacities of 57 mm and 75 mm Carbo blocks. Bases may be fitted with springs, but blocks won't hit the deck without them.

Stanchion Mount Base

The 061 stanchion mount base attaches blocks to 22 mm or 25 mm (7/8" or 1") stanchions or pulpits and is often used to lead furling lines to the cockpit. Allows blocks to swivel and pivot for fairleads.

Midrange Cruising ESP Stand-Up

Use the 1634 stand-up base with Midrange blocks and 57 mm or 75 mm Cruising ESP blocks. Block headpost fits into socket without shackle. The low-profile design is ideal for mastbase and halyard lead blocks.

Springs

Springs support blocks on padeyes, eyestraps, bases, and traveler cars, and prevent blocks from hitting the deck.

Stand-Up Boots

Made of durable, flexible PVC, stand-up boots hold blocks up without snagging lines. The 369 fits 40 mm and 57 mm Carbo and Black Magic blocks. The 370 fits 75 mm Carbo blocks.

1634: Midrange and ESP Cruising block stand-up base

Swivels and pivots freely

Blocks will not hit deck

Accessories

Accessories are designed to make standard blocks more versatile or fill a special need. Custom products available on website.

Handhold

The 062 handhold is popular on boats like Solings and scows to help hiking crew reenter the boat. It can also be used as a handle for things like engine covers. It has drain holes.

Bullseye Fairlead

Use the 237 and 339 where there is little deflection in the line such as routing a spinnaker pole foreguy aft along the cabin house.

Sail Chafe Protectors

Use the 285 to ease genoas over lifelines or past shrouds and to help large roach mainsails clear backstays.

Prefeeder

Use 947 with racing foils or furling systems.

Dinghy Clew Hook

The 433 and 394 dinghy clew hooks are designed for Lasers and other loose-footed dinghies. They install permanently on the boom and allow you to instantly attach and adjust your sail in high wind and waves.

Self-Contained Sheaves

Self-contained sheaves are designed for sailors to use in custom applications.

The Micro, Bullet, and Big Bullet sheaves are Delrin with Delrin® ball bearings. They are scored for rope. 16 mm sheaves are Delrin and feature stainless ball bearings that ride in a grooved race. Midrange sheaves come in either Delrin or aluminum for wire.

Wire sheaves are Hard Lube-anodized aluminum that ride on high-load composite bearings.

Ball bearings in the 38 mm (1 1/2") and 51 mm (2") sheaves minimize friction. The 25 mm (1") wire sheave uses low-friction washers for this purpose.

Two 160 sheaves make up the 161 dual-sheave universal lead. Use this sheave to divert a line that must turn in either direction.

Use Cruising ESP sheaves to handle high static loads from halyards and reef lines. Sheaves are carbon-black Delrin for UV-protection and turn on stainless steel spacers. Contained sideload ball bearings allow sheaves to spin freely when loads are released. Sheaves require a sideplate for the sideload balls to roll on.

Use for:

Custom applications

Ball bearings handle low loads and sideloads from unfair leads.

Plastic sleeve bearing for high static loads

Big Boat Sheaves

Big Boat sheaves are available for special applications as well as for replacement sheaves in Big Boat blocks. Made of Hard Lube-anodized, 6061-T6 aluminum, sheaves feature Teflon[®] rollers to carry high radial loads and carbon-black Delrin[®] ball bearings to support sideloads and provide UV-protection. Select sheaves based on load-carrying capability.

Installation requires clamping or securing inner race.

Use for:

- Mainsheets
- Spinnaker sheets
- Afterguy/foreguy
- Footblocks

V Sheaves

High-load titanium V sheaves feature the same incredibly efficient bearing set of angled titanium rollers as Harken's V blocks. Harken V sheaves are extremely versatile! Perfect for running lines underdeck, in mainsheet and spinnaker sheet or drop line systems. They are also perfect to rig clean backstay systems to steady today's slender masts and adjust mast bend. Snap fit Delrin® side covers require no tools to disassemble for maintenance.

V sheaves are available in 1.5T to 20T sizes, labeled with working loads. Use the wide sheave for two-sheet peels. Use the wide tulip sheaves to handle a single line with line-entry range of deflecting angles.

V sheaves are named for the unique V-shaped angled rollers that handle both axial and thrust loads.

High-Load Sheaves

High-load sheaves are offered as replacement parts or for use in special applications. Their bearing system combines sideload-carrying balls with a PTFE composite bushing to carry radial loads. While not as free-rolling as the standard Harken ball/roller bearing system, this compact bearing system is extremely durable and perfect for carrying high loads in a restricted diameter.

Installation requires clamping or securing inner race.

Custom sheaves available by request. View more options on harken.com.

Use for:

Masts
Booms
Deck organizers
Through-the-transom running backstays

*Based on use of solid 304 stainless shafts.

Narrow Halyard & Steering Sheaves

Narrow high-load sheaves in mastheads improve sail handling, speed sail changes, and allow the use of smaller, lighter halyard winches. Used in steering systems, these sheaves return “feel” to wheel-steered boats.

Sheaves combine sideload-carrying balls with a PTFE composite bushing for radial loads. These durable sheaves are made of 6061-T6 aluminum and are well-suited for masthead and steering installations.

Installation requires clamping or securing inner race.

Use for:

Masthead/halyard sheaves
Steering systems

Deck Organizers

Harken deck organizers lead halyards and control lines aft, allowing crew to sail from the security of the cockpit. The injection-molded composite top plate provides superior impact and UV resistance. Asymmetrical sheaves of glass-filled nylon have flared bases to lift lines up and off the deck, and combine with a proven bearing system to reduce friction. Organizers are available in two-, three-, four-, or five-sheave configurations and are stackable for multiple mounting options.

Asymmetrical sheaves lift lines off deck.

Deck organizers stack for additional configurations.

82 ‡If double stacked, upper block/organizer is two-thirds of listed MWL and breaking load.

Big Boat Deck Organizers

Use Big Boat deck organizers to lead multiple lines aft to halyard stoppers or winches. Organizers are also perfect for many other applications that call for a multiple-sheave, cheek-mounted lead block.

Deck organizers feature aluminum hardcoat-anodized sideplates for strength and corrosion resistance.

Use for:

- Halyards
- Reef lines
- Outhauls
- Pole lifts
- Control lines

Saare 41ac, 12.42 m (41') © Saare Yachts

Big boat deck organizers are available with up to 10 sheaves by custom order.

Spinnaker Pole Cars

Harken spinnaker pole cars feature recirculating ball bearings to permit adjustment under load. They roll freely on low-beam traveler track to allow crew to adjust for optimal sail shape. Machined aluminum hardcoat-anodized races permit Torlon® bearings to transition smoothly from active to return race for smooth trimming or easing.

Cars feature captive ball bearings, making them easy to load onto the track and to maintain.

Strong, lightweight cars are constructed from one-piece solid aluminum that is Hard Lube-anodized for strength and durability.

Ring fittings are 17-4 PH stainless steel and accept piston pole ends for end-to-end jibing. Midrange and Big Boat cars accept two popular toggle studs and Harken ball-end fittings. Cars are also available from Harken's Custom Division.

Use for:

Spinnaker poles
Whisker poles

Patented wire retaining clips keep balls captive, making cars easy to load and maintain. Composite corner keepers help keep ball bearings captive when the car is off the track. For a cost-effective option, CB+ cars can be modified to run on Harken non-CB track.

Cars fit low-beam track.

Soft Attachments

LOUP

LOUP® soft attachments replace heavy stainless steel shackles on racing and cruising boats. Weight savings on large offshore boats can be as much as 91 kg (200 lb).

Strong and lightweight, LOUPS are constructed using multiple coils of tough Dyneema® with Spectra® cover—one of the most durable materials made. An annealing process ensures loads are equal on all coils. Colored tracers on the cover specify LOUP strength by indicating the number of Dyneema coils.

When fitting hardware, choose the LOUP that matches the attachment method shown in the chart. Custom length LOUPS are also available.

T2 Loops

Use T2 Loops in Carbo T2 blocks. These strong, lightweight soft attachments are woven of Dyneema fibers, and are load-set and locked-stitched to prevent stretch after installation.

LOUP is a registered trademark of Yale Cordage.
Dyneema is a registered trademark of DSM Dyneema.
Spectra is a registered trademark of Honeywell International, Inc.

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Stainless Steel Shackles

Forged

Stainless steel shackles used on Harken blocks are available separately. Multiple configurations and sizes.

Stamped Shackles

The 072, 138, 246.PAIR, and 2761 shackles are used on most of the Small Boat blocks. They are also useful for a range of other applications.

Snap Shackles

The 111, 112, and 1584 snap shackles fit a variety of blocks and make them removable. Many use a snap shackle on the lower vang block so that it can be moved from the mastbase to the toerail for use as a preventer.

U-Adaptors

The 093 U-Adaptor allows blocks with 10 mm (3/8") posts to be attached to swivel bases or to other blocks with 10 mm (3/8") posts.

The 1598 U-Adaptor allows blocks with up to 15 mm (19/32") posts to be attached to swivel bases or to other blocks with 15 mm (19/32") posts.

The 463 U-Adaptor adapts 75 mm Carbo singles to swivel bases.

The 9050 U-adaptor allows 57/75 mm Carbo blocks to be attached to 170 Hexa-Cat Base or other blocks with 12.7 mm (1/2") posts and 6.35 mm (1/4") pins.

The breaking strengths shown are derived from tests that supported 80% of the length of the screw pin that is unsupported, which is similar to the area of a post in a block. Maximum working loads are no more than half the minimum breaking strength.

Number on shackle denotes screw diameter in millimeters.

High-resistance shackles are marked "HR".

U-Adaptors attach blocks to swivel bases or to other blocks.

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Eyestraps

Eyestraps are useful accessories. They form light-duty mounting bases for blocks, serve as lash-down points, and can be used for fairleads.

Forged 316 stainless eyestraps are extremely strong and their smooth shape won't chafe line.

Harken offers two sizes of tough, nylon-resin eyestraps to secure shockcord, sheet bags, and other items where loads are light. Available in packages of six.

Folding Padeyes

Folding padeyes keep deck and passageways clear. They're ready to attach a snatch block or fender, but fold safely out of the way when not needed.

Bolt-down bases and D-rings are 316 stainless steel. A vulcanized thermoplastic pad prevents rattling and holds the D-ring in position.

Use for:

Loops/soft attachments
Jacklines and tethers
Leads
Tie downs
Lifting points
Fenders

3206

3207

FOLDING PADEYES Q&A

HOW SHOULD I ALIGN THE LOAD ON A FOLDING PADEYE?

Folding padeyes differ from conventional padeyes in that the load should be perpendicular to the hinge and bail instead of in line with it. The strongest positions are with the D-ring vertical or leaning toward the fold-down position, which focuses the load on the side anchored with two screws.

Padeyes

Padeyes are great for mounting blocks and are also used as attachment points for staysails, reefing blocks, and hundreds of other items.

Harken offers a range of stainless steel padeyes. The diamond-shaped padeyes, 688 and 689, are 316 stainless and often used at mastbases where the diamond shape allows them to be mounted very close together. The 2759 is 316 cast stainless steel. The 627, 629, and 648 padeyes are 17-4 PH stainless.

For maximum strength always align fixed padeye bails to the load.

Removable & Fixed Padeyes

Removable Padeyes

Harken offers a variety of removable padeyes for blocks from 57 mm Black Magic, to custom blocks with maximum working loads of 23,000 kg (50,715 lb). Bases swivel so padeyes align to the load. This prevents the reduction of the block's maximum working load. The swivel feature is a Harken exclusive.

Fixed Padeyes

In-deck padeyes are recessed into the deck creating a discreet, low-profile design. Lightweight and compact, Harken padeyes work well with almost any soft-attach block, including Black Magic Loop blocks, Snatch blocks and V blocks.

Padeyes are mirror-polished, stainless steel to complement the look of classic and modern yachts.

Lead Rings

Harken lead rings are simple, weight-saving devices used to route line for jib in-haulers, twings, barberhaulers, Lazy Jacks, cascading backstays and other applications requiring minimal fine-tune adjustments. Rings are Hard Lube-anodized 6061-T6 aluminum for a smooth, slippery surface. With no moving parts, wear is minimal.

LEAD RINGS Q&A

I'M THINKING OF USING HARKEN LEAD RINGS TO ADJUST MY VANG. WHAT ARE YOUR THOUGHTS?

Harken Lead Rings should only be used for applications with high static loads, where trimming angles aren't acute, or where only minor adjustments are needed. They will definitely save you weight in your vang system, but you'll be adding friction to the line compared to free-running ball bearing blocks.

Jib Leads & Fairleads

Bolt-Down Fairleads

Harken Bolt-Down Fairleads are used as shallow-angle line deflectors on boats 6 - 15 m (20 - 50'). These weight-saving fairleads are built of 6061-T6 Hard Lube-anodized aluminum for durability. Smooth surfaces and radiused center holes minimize line wear.

Bolt-Down Fairleads are available in single, double, and triple configurations with 12 or 16 mm hole sizes.

Grand Prix Jib Leads

Strong aluminum jib leads deflect jib sheets to winches, preventing overrides. These jib leads have two small drilled holes through which a loop can be spliced to attach the hobbles. This temporarily secures the jib/genoa clew to free-up a winch for mark roundings.

Fastener spacing

TECH TIP

Hex-head bolts are ideal for one-person through-deck fastening as the hexagonal head is held securely by the sides of the inset when being tightened.

Maxi 650, IDBmarine, 6.5 m (21.3'), naval architect: David Raison © Jacques Le Gall

Aluminum Tiller Extension

The rigid anodized body of this tiller extension transmits subtle boat and rudder movements, allowing the skipper to steer by the feel of the helm. The simple and lightweight design has no unnecessary frills—every aspect contributes to its strength, stiffness, or comfort. The universal joint and nonslip foam grip are UV-protected and perfect for full dagger-grip and fingertip steering.

Universal joint rotates 360°.

Nonslip foam rubber grip.

Halyard Tensioners

Designed for rope or wire halyards on large cruisers, the Harken halyard tensioner locks halyards at full hoist and frees your halyard winch for other functions.

The one-piece aluminum car body is Hard Lube-anodized for durability. Track is extruded from 6061-T6 aluminum and hardcoat-anodized for a hard, long-lasting surface.

Choose the 40 mm version in single-pin, double-pin, or triple-pin configurations based on required working load. 32 mm version available in single-pin only. Custom cars can be designed to handle higher loads.

Francesco Canzi Tech Service Supervisor

Harkenite Since 2008

One thing
Francesco
Canzi likes about

his job as technical service supervisor at Harken Italy is that it's not routine.

On a typical day you can find Francesco helping customers with technical service, installing equipment on racing boats, traveling to regattas around Europe to perform maintenance on participants' boats, commissioning maxi yachts, and performing sea trials. Francesco says one of the most challenging service jobs was to fix some overload issues on winches during sea trials for the J Class *Svea* in 2017.

Francesco, who has a degree in mechanical engineering, has been with Harken Italy since September 2008. Like a lot of Harken employees, he likes to sail during off-hours and takes his Laser out on Como Lake. He can see the mountains from the windows of his home in Saronno, Italy, and he enjoys skiing and mountaineering there.

Dinghy Pinstop Jib Lead Cars

These easy-to-adjust cars combine a spring-loaded pinstop with precise track spacing. Use on dinghies and small sport boats with jibs up to 13 m² (140 ft²). Cars are built of tough 6061-T6 aluminum that is Hard Lube-anodized for durability. Track is hardcoat-anodized.

The 450 pinstop jib lead has a removable bail to attach a spring and block. The 452 bullseye lead has a controlled pivot angle so the cleat is always within easy reach. Use 451 bullseye cars when line deflection is small.

Flexible, lightweight, lashing attachment allows block to articulate freely on 450 jib car.

Crossbow Pivoting Self-Tacking Jib Traveler System

The Crossbow self-tacking jib traveler is designed for high-performance dinghies, skiffs, and catamarans under six meters (20'). The system features a curved track that hinges to align both car and track with the sheet loads for less friction, more load-bearing capacity, and for an ultra-lightweight design.

The two-piece car body is machined of 6061-T6 aluminum and Hard Lube-anodized for strength and corrosion resistance. Curved races evenly distribute the loads on Torlon® ball bearings for low-friction rolling. A Delrin® cap keeps the balls captive when the car is removed from the track. The hardcoat-anodized track has three pivoting attachment points that distribute the load.

Track is offered in 20 or 50 mm heights. Use 20 mm track for the lightest weight setup, or for spinnakers with a separate tack and halyard system.

Use 50 mm track with a single-line spinnaker system. The track's center strut has a hole for a fair, chafe-free halyard lead.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.
Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.

Curved races evenly distribute the loads on Torlon ball bearings for low-friction rolling.

The track's center strut has a hole for a fair, chafe-free halyard lead.

Ordering Traveler Systems

1. Determine System Size

Determine size of traveler system (13, 22, 27, 32, 42, or 64 mm) based on mainsail area, placement on the boom, and mono- or multihull. See **Mainsail Traveler System Size Selection** chart. Typical boat lengths are listed as a guideline only.

Typical Boat Lengths:

22 mm Small Boat: 6.7 - 8.5 m (20' - 28')
27 mm Midrange: 7.9 - 10.7 m (26' - 35')
32 mm Big Boat: 10.4 - 12.8 m (34' - 46')

2. Select Track

Select size and length of track (sizes listed by width measurement of top of track in millimeters). Choose low-beam track if it will be supported the entire length. Choose high-beam track for spanning companionways, cockpits, etc.

13 MM MICRO

22 MM SMALL BOAT

27 MM MIDRANGE

32 MM BIG BOAT

LOW-BEAM

HIGH-BEAM

Ordering Traveler Systems

3. Select Car & Purchase Requirements

Based on system size and purchase requirements, select a car and accessories that match track and load requirements. Select control blocks for the car.

A kit contains car-mounted components to make a 2:1, 3:1, or 4:1 system. 27 and 32 mm systems only.

Cars come standard with shackles for attaching the mainsheet to the car. Upgrade to a stand-up toggle with control tangs to attach high-performance ball bearing control blocks. See **Purchase Selection Guides** for examples and sizing.

4. Choose End Controls

Choose end controls that mate with the control blocks on the traveler car for the correct purchase system, including a deadend, allowing clean-running lines. Use Carbo ball bearing end controls with toggle-mounted, ball bearing control blocks, or use ESP sleeve bearing end controls with ESP car-mounted, sleeve-bearing control blocks.

Options include end controls with attached cams, or purchase cams separately and mount remotely. See pages 260 - 261 for common systems.

5. Choose Endstops

Endstops are designed to absorb shock loads and should be installed when end controls are not used. Trim caps finish off track ends cleanly. Select high- or low-beam endstops/trim caps to match track. Low-beam, line-shedding endstops prevent snags. Sold in pairs.

6. More Information

Previous steps show the most common configurations. Other options include windward sheeting cars, soft attachments, coupled cars, track risers, and track splice links.

If you have questions, contact a professional rigger or Harken Technical Service at technicalservice@harken.com.

CB TRAVELERS & GENOA LEAD CARS

Harken ball bearing traveler and genoa lead cars with multipart purchases allow easy adjustment of loaded sails from the cockpit. Whether racing or cruising, these smooth-rolling systems pay huge dividends in sail control and are safer and faster than playing the sheet. Patented CB (captive bearing) systems are available in four sizes to fit boats from the smallest dinghies to big boats. Non-CB systems (CRX, Mini-Maxi, and Maxi) are offered for larger yachts.

Strong, corrosion-resistant cars and track stand up to sun, salt, and time

- One-piece, 6061-T6 aluminum cars
Hard Lube-anodized, UV-stabilized.
- Cars CNC sculpted to remove excess weight.
- Track is 6061-T6 aluminum, hardcoat-anodized.

Low-friction ball bearing cars for easy adjustment under load

- Torlon® bearings roll smoothly under both high and low loads.

Easy loading and maintenance

- CB wire retaining clips and composite corner keepers keep ball bearings captive when car is off the track.

Choice of end-boom or mid-boom configurations

- Use with high-beam track when raising traveler out of cockpit.

Cost-effective retrofit options

- CB+ cars can be modified to run on old style Harken non-CB track supplied until 2003; upgrade cars without replacing track. Look for the plus sign on the end of the car to confirm that it is a CB+ car.

Replacement kits restore traveler performance

- Harken replacement traveler kits are the fastest, easiest way to replace an old traveler with one that fits and works correctly. Take the guesswork out of picking the right parts.
- Five boxed kits come in three sizes: two Small Boat, two Midrange, and one Big Boat.
- Kits meet installation requirements of boats from 5.5 – 13.4 m (18 – 44').
- Kits include car and end controls; purchase track and fasteners separately.

Ball or roller bearing control block options

- Stand-up toggles with ears attach Carbo or Black Magic control blocks for 2:1 up to 6:1 systems.
- Pair with Carbo ball bearing end controls for reduced friction and smooth-running system.
- Carbo-Cam or Cam-Matic cleats keep weight minimal.

Ball bearing end control

Sleeve bearing control block options

- Cars feature built-in sleeve bearing control blocks for value-oriented options for installation of 2:1 to 4:1 systems.
- Pair with sleeve bearing end controls for durability and strength.
- Carbo-Cam or Cam-Matic cleats keep weight minimal.

Sleeve bearing end control

13 mm Micro: CB Cars

Harken Micro CB traveler cars are used on small dinghies and catamarans.
About CB traveler cars: see feature pages at beginning of this section.

2701

Block not included

Loop cars matched with 29 or 40 mm Carbo T2 blocks attached with high-tech line provide the ultimate lightweight, low-profile system.

Pivoting shackle cars have low pivot points to handle nonvertical loads.

2702

2700

2703

2705

2704

16 mm control blocks spin on stainless steel balls that roll freely under high loads. The step-down design keeps the controls low and clear of the mainsheet block.

22 mm Small Boat: CB Track & Accessories

Variable Hole Spacing Track

CB (Captive Ball) high-beam variable hole spacing track is used to span cockpits or other unsupported areas. Track features internal slide bolts, allowing new track to be installed without drilling additional holes.

High-Beam Drilled Track

374 and 2725 high-beam track is predrilled with holes for mounting fasteners.

Low-Beam Track

Low-beam track is available with or without pinstop holes.

Endstops/Trim Caps

When end controls are not used, add endstops to absorb shock loads. When end control assemblies are used, trim caps finish track ends. Sold in pairs. Fasteners not included.

Splice Links

Splice links join track and keep it aligned during installation.

Curved Track

Harken will bend track to your specifications. See page 127.

2721

Bolt slides included. Fasteners not included.

*Available as a non-CB car on a car loader to run on a non-CB style track supplied before 2002. Add .NW to end of part number.

**Small Boat low-load cars with a 227 kg (500 lb) maximum working load use Delrin® balls. See page 275 for replacement balls.

†For horizontal curved track only—600–800 mm (24"–40") radius. This car cannot be modified to run on old-style track made before 2003.

22 mm Small Boat: End Controls

About Carbo ball bearing or ESP sleeve bearing end controls:
see feature pages at beginning of this section.

Carbo ball bearing end controls have an integrated bar for deadending control line.

Assemblies secure to track, eliminating additional holes.

Tough one-piece bases and cam arms are machined from a single piece of aluminum.

22 mm Small Boat: Car Accessories

Accessories

The 384 traveler block features high-load composite bearings to handle wire and high-strength line.

Stand-up toggles hold blocks upright on travelers. Control tangs allow attachment of control blocks.

Refer to stand-up toggles chart for mainsheet block compatibility.

See purchase selection guide for control blocks.

Replacement Traveler Kits

Replacement traveler kits are the easiest way to restore modern traveler function.

Kits come in two purchase options with prematched parts for easy retrofits.

*Deadend line through center of sheave.

22 mm Small Boat: Genoa Lead Cars

CB adjustable genoa lead cars feature recirculating Torlon® ball bearings for easy adjustment under full sheet loads.

Stainless steel sheave carriers pivot 60 degrees to accommodate changing lead angles. Wide sheave holds two sheets during sail changes.

Cars feature car-mounted, sleeve-bearing control blocks for strength and durability. All CB genoa lead cars are compatible with Harken end controls. Kits are available for purchase upgrades up to 4:1.

CB Adjustable Cars

Sheave carriers feature high-performance sheaves with ball bearings to handle radial loads, while sideload balls handle thrust loads for easy trimming and fore-and-aft adjustment.

ESP CB Adjustable & Pinstop Cars

Sheave carriers feature ESP sleeve bearing sheaves.

Use pinstop cars in applications where lead positions change infrequently.

Pinstop and ball bearing genoa lead cars both run on ball bearing track, allowing system upgrades without changing track.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

GENOA LEADS Q&A

WHY DO I NEED ADJUSTABLE GENOA LEAD CARS?

If you are a cruiser, ball bearing genoa lead cars with multipart purchases allow you to quickly adjust loaded headsail leads from the cockpit. If you race, ball bearing lead cars let you quickly change your sheeting angle, adjusting the twist to optimize sail shape.

For sheet-loading formulas see page 279

*Available as a non-CB car on a car loader to run on a non-CB style track supplied before 2002. Add .NW to end of part number. See page 276 for replacement balls.

27 mm Midrange: CB Track & Accessories

Variable Hole Spacing Track

CB (Captive Ball) high-beam variable hole spacing track is used to span cockpits or other unsupported areas. Track features internal slide bolts, allowing new track to be installed without drilling additional holes.

Low-Beam Track

Low-beam track is available with one, two, or three pinstop holes between fasteners or without pinstop holes.

Endstops/Trim Caps

When end controls are not used, add endstops to absorb shock loads. When end control assemblies are used, trim caps finish track ends. Sold in pairs. Fasteners not included.

Splice Links

Splice links join track and keep it aligned during installation.

Track Risers

Use 1849 risers for mid-boom travelers that must clear companionway hatches. Risers fit most cabintops and articulate for use with either straight or curved track. Sold in pairs.

Curved Track

Harken will bend track to your specifications. See page 127.

27 mm Midrange: CB Cars

Midrange CB traveler cars are built to handle high loads on boats from 8 m to 10 m (27' to 34').

About CB traveler cars: see feature pages at beginning of this section.

Carbo ball bearing controls

For a ball bearing system, use separate Carbo control blocks mounted on the stand-up toggle control tangs to add up to 4:1 purchase. See page 112.

ESP sleeve bearing controls

For an ESP sleeve-bearing system, use a T27KIT control block kit mounted on the car to add up to 4:1 purchase. See page 112.

E2750HB

ESP SLEEVE BEARING END CONTROLS

Carbo ball bearing end controls
have an integrated bar for
deadending control line.

Assemblies secure to track,
eliminating additional holes.

Tough one-piece bases and cam
arms are machined from a single
piece of aluminum.

Use E2750HB
double-sheave ESP end
controls for cabintop travelers
where lines lead to the aft edge
of the cabintop.

Contact Harken to order special
length track with mounting holes
for E2750HB end controls.

Fasteners not included.

27 mm Midrange: Car Accessories

Control Block Kits

Kits are available for Midrange cars to add sleeve-bearing control systems for up to 4:1 purchase. Combine with sleeve-bearing end controls.

Stand-Up Toggles

Stand-up toggles hold blocks upright on travelers. Control tangs allow attachment of ball bearing Carbo control blocks.

Refer to stand-up toggles chart for mainsheet block compatibility. See purchase selection guide for control blocks.

Replacement Traveler Kits

Replacement traveler kits are the easiest way to restore modern traveler function. Kits come in two purchase options with prematched parts for easy retrofits.

27 mm Midrange: Genoa Lead Cars

CB adjustable genoa lead cars feature recirculating Torlon® ball bearings for easy adjustment under full sheet loads.

Stainless steel sheave carriers pivot 60 degrees to accommodate changing lead angles. Wide sheave holds two sheets during sail changes.

Cars feature car-mounted, sleeve-bearing control blocks for strength and durability. All CB genoa lead cars are compatible with Harken end controls. Kits are available for purchase upgrades up to 4:1.

CB Adjustable Cars

Sheave carriers feature high-performance sheaves with roller bearings to handle radial loads, while sideload balls handle thrust loads for easy trimming and fore-and-aft adjustment.

ESP CB Adjustable & Pinstop Cars

Sheave carriers feature ESP sleeve-bearing sheaves.

Use pinstop cars in applications where lead positions change infrequently.

Pinstop and ball bearing genoa lead cars both run on ball bearing track, allowing system upgrades without changing track.

*Available as a non-CB car on a car loader to run on a non-CB style track supplied before 2003. Add .NW to end of part number.

See page 276 for replacement balls.

32 mm Big Boat: CB Track & Accessories

Variable Hole Spacing Track

CB (Captive Ball) high-beam variable hole spacing track is used to span cockpits or other unsupported areas. Track features internal slide bolts, allowing new track to be installed without drilling additional holes.

Low-Beam Track

Low-beam track is available with one, two, or three pinstop holes between fasteners or without pinstop holes.

Endstops/Trim Caps

When end controls are not used, add endstops to absorb shock loads. When end control assemblies are used, trim caps finish track ends. Sold in pairs. Fasteners not included.

Splice Links

Splice links join track and keep it aligned during installation.

Track Risers

Use 1849 risers for mid-boom travelers that must clear companionway hatches. Risers fit most cabintops and articulate for use with either straight or curved track.

Curved Track

Harken will bend track to your specifications. See page 127.

32 mm Big Boat: CB Cars

Big Boat CB traveler cars handle high loads on boats from 9.5 m to 15 m (32' to 50') and up to 21 m (70') with coupled cars.

About CB traveler cars: see feature pages at beginning of this section.

Carbo ball bearing controls

For a ball bearing system, use separate Carbo or Black Magic control blocks mounted on the stand-up toggle control tangs to add up to 6:1 purchase. See page 120.

ESP sleeve bearing controls

For an ESP sleeve-bearing system, use a T32KIT control block kit mounted on the car to add up to 6:1 purchase. See page 120.

32 mm Big Boat: Car Accessories

Traveler kit
installation

Stand-Up Toggles

Stand-up toggles hold blocks upright on travelers. Control tangs allow attachment of ball bearing Carbo control blocks.

Refer to chart below for mainsheet block compatibility. See page 120 for control block purchase selection guide.

Couplers

Big Boat couplers join two cars to form high-load assemblies. The high-load 580 and 752 couplers fit T3201B and T3201B.HL cars. Use 580 and 752 couplers for single-point attachments. Use single, double, or triple Black Magic with the 752 coupler.

Control Block Kits

Kits are available for Big Boat cars to add ESP sleeve-bearing control systems for up to 6:1 purchases. Combine with ESP end controls.

Replacement Traveler Kit

Replacement traveler kits are the easiest way to restore modern traveler function. Kit comes with prematched parts for easy retrofits.

3225

3190

1947

1948

1949

Control blocks attach to ears to reduce load on car.

Toggles have a low pivot point to handle mainsheet loads up to 40 degrees from vertical, while allowing cars to roll freely.

32 mm Big Boat: Genoa Lead Cars

CB adjustable genoa lead cars feature recirculating Torton® ball bearings for easy adjustment under full sheet loads.

Stainless steel sheave carriers pivot 60 degrees to accommodate changing lead angles. Wide sheave holds two sheets during sail changes.

Cars feature car-mounted, sleeve-bearing control blocks for strength and durability. All CB genoa lead cars are compatible with Harken end controls. Kits are available for purchase upgrades up to 4:1.

CB Adjustable Cars

Sheave carriers feature high-performance sheaves with roller bearings to handle radial loads, while sideload balls handle thrust loads for easy trimming and fore-and-aft adjustment.

ESP CB Adjustable & Pinstop Cars

Sheave carriers feature ESP sleeve bearing sheaves.

Use pinstop cars in applications where lead positions change infrequently.

Pinstop and ball bearing genoa lead cars both run on ball bearing track, allowing system upgrades without changing track.

Torton is a registered trademark of Solvay Advanced Polymers L.L.C.

*Available as a non-CB car on a car loader to run on a non-CB style track supplied before 2004. Add .NW to end of part number. See page 276 for replacement balls.

**50 mm hole spacing required. ‡Contact Harken to request quote and lead time.

CB Cars: Windward Sheeting & 3:1 Cars with Cams

Windward Sheeting Cars

Race once with the windward sheeting traveler car and you'll never race without one again. Pull the car above the centerline without releasing the leeward control line. Tack, and the car stays in the same position, ready to be pulled to the new windward side.

Mount track in the cockpit or near deck level.
For dinghies to large offshore boats.

3:1 Midrange Cars with Cams

The 1628 and 1629 cars with 365 Carbo-Cam cleats provide additional mechanical advantage (3:1 versus 2:1) by trimming from the car as opposed to a fixed point at the end of the track. Cars fit 27 mm Midrange CB track.

WINDWARD SHEETING CARS

Patented wire retaining clips keep balls captive, making cars easy to load and maintain. Composite corner keepers help keep ball bearings captive when the car is off the track. For a cost-effective option, CB+ cars can be modified to run on Harken non-CB track.

See page 275 for replacement balls. *Not windward sheeting. Stop knot required to keep car from hitting end control.

CRX Roller Cars

The Harken Custom Division has been supplying racers and cruisers with innovative hardware for over 20 years. Whether you use existing custom solutions or require something new, our engineers hold your project to the highest standards: from design, to manufacturing, finishing, installation, and worldwide service.

CRX Cars

CRX Roller traveler cars carry almost double the load at half the weight of similarly sized traveler cars. Torlon® rollers provide increased bearing contact over balls to handle higher loads. Captive bearings make cars easy to load and maintain.

Toggle cars such as the 3074 and 3075 offer a low-profile traveler solution. CRX Loop cars are alternatives for high-load applications.

Use roller travelers with straight track only. Contact Harken for curved traveler applications. Big Boat CRX track uses E3200 endstops and 3173 or 3174 end controls. Mini-Maxi track uses 1702 or custom endstops.

PCRX System

The award-winning PCRX mainsheet traveler features a hinged track that pivots as the mainsheet angle changes. This design aligns the car to the load for less friction, more load capacity, and lighter weight. Eliminating the toggle reduces the car's height and weight. Mini-Maxi PCRX traveler systems are used on America's Cup and Volvo racers, with Big Boat versions on TP52s and IRC 70s.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Rollers carry extreme loads in a compact, lightweight package.

Captive rollers for easy loading and maintenance.

42 mm Mini-Maxi

Mainsail Traveler Cars

42 mm Mini-Maxi travelers bring the ease of dinghy traveler adjustment to large offshore boats. Cars ride on two rows of recirculating Torlon® ball bearings and roll freely under high, nonvertical loads. Custom configurations or cars for horizontally curved track available on request.

Genoa Lead Cars

All cars are available with a plain body, with pinstops, or puller tangs. Car bodies are made of either hardcoat-anodized aluminum or high-luster stainless steel. Maximum working loads range from 4082 kg (9000 lb) to 9000 kg (19842 lb). Custom cars can be designed to handle higher loads.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

*First hole 50 mm (1 15/16").

Curved Track

Track is often bent to follow the cabin house curve or boom radius. Sometimes track is bent vertically, ends up, to relieve tension on the sail's leech as the traveler car moves off the boat's centerline.

To perform smoothly and carry the correct load, the traveler car's length must suit the track radius. Each traveler car page has a chart which shows the minimum radius on which each car will ride. If the load requires a long car, but the radius will be too tight, consider using two short cars joined by a coupler.

Minor bends can often be made when the track is installed. If the track requires more bend, Harken can provide horizontal, vertical, or compound curves to specification for a modest charge. If the bend is continuous, add 50 - 100 mm (2 - 4") to each end because track cannot be bent to its ends. Standard Harken Mini-Maxi and Maxi traveler cars cannot ride on vertical bends with a radius under 15.25 m (50').

1. Vertical Bend: Ends Down

This bend is used for mainsheet travelers mounted over the cabin house. The curve matches the crown of the cabin house and allows the track to clear the companionway hatch, but minimizes the height of the track risers.

2. Vertical Bend: Ends Up

Some boats use this bend to relieve leech tension when the traveler car moves off centerline. Ends-up bends are also used for staysails. Tracks angled forward to face the clew of the sail mount on risers.

3. Horizontal Bend

Horizontal bends allow the traveler to follow the radius of the boom as it swings across the boat. The track stays flat and the ends curve to the boat's bow or stern. Sometimes horizontal bends are used for boom vang and occasionally for staysails, especially those with booms.

4. Compound Bend

Compound bends are a combination of a vertical and horizontal bend. The track curves in the horizontal plane to follow the radius of the boom, but mounts to a deck that has a slight crown.

Track	Compound bends

Simple bend: track length of 2 m (6'6¾") or less and chord depth less than 200 mm (8").				
Major bend: track length of 2.1 m (6'10⅞") or greater or chord depth of 200 mm (8") or greater.				
Compound bend: bend in both horizontal and vertical planes.				
Compound simple bend: both bends are simple bends.				
Compound major bend: one or both bends are major bends.				

*Horizontal only. Contact Harken Tech Service for vertical bends.

Ordering Information

To order curved traveler track, please specify the following information:

Boat model _____

Track part number _____

Bend part number _____

Chord length _____

Chord depth: horizontal _____

Chord depth: vertical _____

or radius: horizontal _____

or radius: vertical _____

Check one:

☐ Vertical bend: ends down

☐ Vertical bend: ends up

☐ Horizontal bend: ends forward or aft

☐ Compound bend:
horizontal and vertical (ends down)

☐ Compound bend:
Horizontal and vertical (ends up)

Aluminum & Stainless Steel T-Track

Anodized aluminum T-Track features rounded top edges for protection and impact resistance. Drilled and tapped holes at ends make endstop installation easy.

32 mm high-performance track is black hardcoat-anodized. It has precise 33 mm pinstop hole spacing.

Stainless steel track is available in 32 and 40 mm. The high-luster finish makes it ideal for luxury cruisers/racers from 9.5 m - 42 m (33 - 140').

T-Track Genoa Lead Cars

T-Track genoa lead cars are used where frequent lead adjustments are not required. T-Track cars have an integral pinstop to lock the car into position.

The car's one-piece, solid aluminum construction is lightweight and strong. The stainless steel carrier tilts side-to-side to ensure a fair lead. 40 mm cars have roller/ball bearing sheaves to improve trimming performance.

Custom accessories such as remote pinstops and adjustable sliders with tangs to accommodate floating blocks are available. Contact Harken for information on our complete range.

Note: T-Track genoa lead cars cannot be adjusted under load.

Access Rail System

Harken designed the Access Rail system so crews of very large yachts would have a secure system that allows freedom of movement, and the ability to lock into position while working outboard along the hull. The Access Rail system is made up of two joined cars that allow the attachment of the personal suspension and the required fall-arrest systems. Its CE certification is among the most respected marks in the world and unique in the marine industry.

Linked cars are constructed of strong, lightweight, one-piece solid aluminum. The pinstop is easy to release, and the car moves smoothly along the track before locking into another position. Patented wire retaining clips keep balls captive, making cars easy to load and maintain. Composite corner keepers help keep ball bearings captive when the car is off the track.

Cars and track come in black hardcoat-anodized or clear-anodized finishes for corrosion protection, durability, and to match the yacht's aesthetics. Stainless steel systems can be special ordered from Harken's Custom Division.

Use the IN10567 car when the track is mounted on a brow or angled on surfaces. The wheel toggle attachment overhangs the edge of the mounting surface so the side of the hull is not chafed.

Pinstop car allows movement of cars along track. Open to move; close to lock in place.

Harken exception:
This product is certified for human suspension.

The system has two anchorage points—one anchorage point for a personal suspension system and the second for the fall-arrest system. Add an optional car and coupler to work as a tool service carrier.

Harken exception: This product is certified for human suspension.

Access Rail System

Photo © TLC Refit & Repairs

Patented wire retaining clips keep balls captive, making cars easy to load and maintain. Composite corner keepers help keep ball bearings captive when the car is off the track. For a cost-effective option, CB+ cars can be modified to run on Harken non-CB track.

MAINSAIL HANDLING SYSTEMS

NEW FOR 2020

**Switch T-Track
Battcar Systems: 40 mm**
SEE PAGES 150-152

Ordering Battcar Systems

1. Determine System Size

The four sizes, systems AA, A, B, and C, are based on sail area (pages 136-143). If you need to reduce car stack height on mast, see **Switch T-Track Battcar Systems** (pages 144-151).

Mainsail Area
P x E x .5

System size	Maximum sail area				Typical boat length			
	Monohull ft ²	Monohull m ²	Multihull ft ²	Multihull m ²	Monohull ft	Monohull m	Multihull ft	Multihull m
AA	350	32	275	25	to 37	to 11.3	to 30	to 9.1
A	600	56	500	46	37 - 50	11.3 - 15.2	30 - 40	9.1 - 12.2
B	900	83	700	65	50 - 60	15.2 - 18.3	40 - 50	12.2 - 15.2
C	1940	180	1510	140	60 - 90	18.3 - 27	50 - 70	15.2 - 21

2. Determine Track Quantity and Type

Use **Mainsail Luff Length** chart on each system page to determine number of track sections.

Slug-mount: most common. Requires 1 slug-mount kit per track section. Select slug that matches the mast's boltrope groove shape.

Drill-tap: for masts without a boltrope groove. Requires 1 splice link at each track joint.

3. Choose Endstop Kit

Quick-release: includes screwpin or pinstop endstop for bottom of mast and fixed endstop for the top.

Fixed: Includes two fixed endstops.

4. Choose Cars

Order 1 headboard, 1 Battcar for every full batten, and use the **Intermediate Car Chart** to determine number of intermediate cars.

CB system: all captive ball bearing components. Lowest friction system for fast sail hoists, douses, and reefs.

Combination system: CB headboard and Battcars, Slider intermediate cars. Reduces cost but uses CB in the most critical load areas.

Slider system: all slider components. Raise and lower sails without jamming the soil in the groove.

Intermediate Cars

Distance between battens*		Intermediate cars between battens
ft	m	
8 or less	2.4 or less	1
9 - 13	2.7 - 4	2
14 - 16	4.3 - 4.9	3

*Boats without full battens should use 1 intermediate CB or slider car per 1.2 m (4') and no Battcars.

5. Contact

If you have questions, please contact your dealer or Harken Technical Service.

Derek M. Baylis, Wylie 65, 19.8 m (65'), Wyliecat Performance Yachts © Erik Simonson

CB & SLIDER BATTCAR SYSTEMS

Favored by skippers and crew, Harken Battcar systems let you raise, douse, and reef the main instantly from the cockpit, even when close reaching in a big breeze. Battcar systems outperform in-mast or in-boom furling, cost far less, and sails don't need to be recut. Four sizes fit monohulls to 27 m (90'); multihulls to 21 m (70').

Strong, corrosion-resistant cars and track stand up to sun, salt, and time

- One-piece, 6061-T6 aluminum cars Hard Lube-anodized, UV-stabilized.
- Track is 6061-T6 aluminum, hardcoat-anodized.

Low-friction ball bearing cars for easy adjustment under load

- High-strength Torlon® ball bearings circulate smoothly for fast sail hoists, douses, and reefs.
- Batten toggle moves freely in all directions to prevent sail from binding when reefing under load.

Sails can be raised/lowered without sticking in mast groove

- Slider cars ride on low-friction plastic inserts.

Materials
For properties
see pages 16-17.

6061-T6 aluminum:
Hard Lube-anodized cars; hardcoat-anodized track

Torlon® thermoplastic:
Ball bearings

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

134 Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Quick-release button

Quick sail removal

- Cars and sails slide off the track by removing the screwpin endstop—no tools required.
- Patented CB captive bearings allow cars to easily roll off track for cleaning and maintenance.
- Captive pin features a quick-release button to remove sail quickly, while allowing car to remain on mast.

Cost-effective retrofit options

- CB and slider Battcar systems use the same track; mix and match to optimize performance and budget.
- CB+ cars can be modified to run on Harken old-style, non-CB track produced until 2003; upgrade cars without replacing track. Look for the “+” symbol at the end of the car.

Mounting kit

Screwpin endstop kit

Flanged track

Drill-and-tap track

Easy mast-up installation

- Battcar track screws directly into slugs that slide into mast groove—no drilling or tapping.

Variety of mounting options

- Slugs for flat or round mast grooves; 1 kit per track section.
- Screwpin endstops to remove cars and mainsail; 1 kit per system.
- Mount flanged track to carbon spars; track features groove for racing sails with boltropes or slugs.
- Masts without internal track, attach Harken 13 - 32 mm traveler track by drilling and tapping the spar.

System AA

Typical boat size:

Monohulls: length to 11.3 m (37');
mainsail area under 32 m² (350 ft²)

Multihulls: length to 9.1 m (30');
mainsail area under 26 m² (275 ft²)

See page 277 for replacement balls. *Available as a non-CB car on a car loader to run on a non-CB style track supplied before 2003. Add .NW to end of part number.

138 † Max. sail area: Monohull 33 m² (350 ft²), Multihull 28 m² (300 ft²). **Batten receptacle not included.

System A

About CB and slider Battcar systems: See feature pages at beginning of this section.

Mast Track

3807 track mounts to mast using a unique slug system that allows mast-up installation.

Use flanged track when mounting to carbon spars. Track features a groove for racing sails with boltropes or slugs.

Part No.	Description	Length		Weight		Fastener spacing		Fastening method
		in	m	oz/ft	g/m	in	mm	
3807	Slug-mount track	80 3/4	2.05	4.44	413	4 15/16	125	Mounting slugs

3878.6M	Flanged track	236 1/4	6	6.7	626			Adhesive

Traveler Track: Drill/Tap

For masts without internal sail track, attach 2720 Small Boat traveler track by drilling and tapping the spar. Join track sections with splice links. Order one per track section. Order one low-beam endstop (sold in pairs).

Part No.	Description	Splice link	Endstop	Ordering information	Fastening method
2720	Small Boat track	2724	263	page 104	Drilling and tapping

Mounting Kits and Endstops

Mounting kit slugs are available for flat or round mast grooves. Order one kit per track section.

Use screwpin endstop to easily remove cars and mainsail. Order one kit only.

SWITCH T-TRACK BATTCAR SYSTEMS

Harken's award-winning Switch T-Track Battcar system cuts the stack height of mainsails on large yachts by half, making it much easier for crew to put on sail covers and to connect/disconnect halyards. This simple, yet sophisticated patented switch system neatly stacks cars side-by-side on top of the boom. The unique switch plate has no moving parts, ensuring an exceptionally reliable and efficient product. Available in 18, 26, 32, and 40 mm sizes for monohulls 11 m (37') to over 43 m (140'); multihulls 9 m (30') to over 27 m (90').

Switch track cuts stack height in half

- Neatly flakes mainsail on top of the boom; stores cars on parallel tracks.
- Headboard cars articulate, pass through switch for further stack height reduction (26 and 32 mm).
- Long switches available to accommodate more cars on boats with large sail areas.

Stand up to sun, salt, and time

- 18 mm high-load, 26, 32, and 40 mm aluminum cars Hard Lube-anodized, UV-stabilized for durability.
- Standard 18 mm cars fiber-reinforced, UV-stabilized, lubricated composite for maximum protection and low wear.
- Aluminum track hardcoat-anodized for a long-lasting surface.
- Switch plate has no moving parts to break.

Materials

For properties see pages 16-17.

6061-T6

aluminum:

Hard Lube-anodized cars; hardcoat-anodized track

Do not use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Low-friction components

- Cars run on low-friction plastic slides.
- Switch plate with no moving parts minimizes friction.

Easy installation/removal of cars

- Gate tracks for 26, 32, 40 mm cars feature easy-to-remove fasteners to load/unload cars.
- 18 mm switch track uses screwpin stops and stop at masthead for easy car removal.

Optional Trysail Switch system reduces weight aloft

- Integrates trysail with mainsail switch systems; shares track.
- Cars switch automatically—only trysail cars travel onto the trysail track; mainsail cars pass through to switch and storage tracks.
- All track is hardcoat-anodized.
- Available in 26, 32, and 40 mm sizes.

18, 26, 32 mm drill-and-tap track

26, 32 & 40 mm flange track

Variety of mounting options

- 18 and 26 mm slug-mount track converts masts with sail grooves for mast-up installation. Boats under 12.2 m (40') use standard slug-mount track. Boats from 12.2 - 13.7 m (40' - 45') require 18 mm high-load slug-mount track at full hoist and all reef point headboard locations. 18 mm systems available for round, flat, or wide flat mast grooves. Boats from 13.7 - 24.4 m (45' - 80') use 26 mm slug-mount track. 26 mm available with flat mast groove slugs.
- 18, 26, 32 mm drill/tap track and switches fit masts without sail grooves; join track sections with splice links.
- 26, 32, and 40 mm flange track is available in bond and bolt-down versions. Bond track is joined to the mast with a structural adhesive to reduce weight aloft; eliminates the majority of track fasteners for lighter-weight system. Consult mast builder for bond track installation recommendations.

18 mm Switch T-Track Battcar Systems

Typical boat size:
 18 mm: Monohulls: 11 - 13.5 m (37 - 45');
 Multihulls: 9 - 10.5 m (30 - 35')
 18 mm high-load:
 Monohulls 13.5 - 15 m (45 - 50');
 Multihulls 10.5 - 12 m (35 - 40')

About Switch T-Track Battcar systems: see feature pages at beginning of this section.

Designed to work with batten receptacles from New Zealand's C-Tech Sailbattens, the pintles have shoulders that protect the threads from bending.

Cut car stack height in half by flaking the sail alternately to port and starboard of the boom.

BATTCAR Q&A

WHY DO I WANT A SWITCH BATTCAR SYSTEM?

A Switch Battcar system cuts stack height in half, so putting on a sail cover or connecting/disconnecting your halyard is a much easier task. The patented system works by alternately dropping mainsail cars onto port and starboard storage racks. Headboard cars articulate and pass through the switch, reducing stack height even more.

18 mm Switch T-Track Battcar Systems

For masts with sail grooves, 18 mm slug-mount track uses a unique system that allows mast-up installation. Use high-load slug-mount tracks on boats over 12.2 m (40') at sail headboard locations at full hoist and headboard locations when sail is reefed. Drill/tap track and switches fit masts without sail grooves. Join drill/tap track sections with splice links. Order one per track section. Boats with larger sail areas should use long switches to accommodate more cars.

Mounting Kits and Endstops

Slug mounting kits are available for flat or round mast grooves. Order one kit per track section.

Switch track includes screwpin stops for easy car and sail removal below switch. Stop at masthead also included.

About Switch T-Track Battcar systems: see feature pages at beginning of this section.

HC8230	Splice link	7/8	22	1/8	3.2	0.02	0.57		

** Use HC8811 high-load track on upper part of mast to reinforce HL system headboard locations. Mount using 50 mm hole spacing at headboard location at full hoist and headboard location at each reef point. Reduce weight in other areas by alternating holes to 100 mm spacing.

***Switch may be shortened to 605 mm (23 13/16").

26 mm, 32 mm Switch T-Track Battcar Systems

Patented Battcar switch systems cut sail stack height in half by automatically splitting cars onto two tracks.

Use HC8879 and HC8880 for headboard reefed position. See page 151. Gate track is removed to load and unload cars.

Spherical bushings let headboard cars pass through switch.

Typical boat size:

26 mm: Monohulls: 15 - 24 m (50 - 80');
Multihulls: 12 - 18 m (40 - 60')

32 mm: Monohulls: 24 - 43 m (80 - 140');
Multihulls: 18 - 27 m (60 - 90')

About Switch T-Track Battcar systems: see feature pages at beginning of this section.

HEADBOARD CAR ASSEMBLY

HC9045 and HC9046 use 3876 or 3877 headboard plates.**

Trysail Switch System

The Trysail Switch allows the mainsail and trysail to share a single track, greatly reducing weight aloft. This asymmetrical switch installs above the standard system and provides a crossover for trysail cars to utilize the mainsail track. The trysail cars are loaded at deck level and travel past the gooseneck and flaked mainsail onto the mainsail track. Switching of the cars is totally automatic; only trysail cars can travel onto the trysail track, while the mainsail cars pass through to the standard switch and storage tracks.

Track

Use standard Switch system T-Track (see pages 149 and 151).

The track's compound bend wraps around the mast section so cars pass next to the mainsail cars on the storage tracks, past the gooseneck and down to the deck. There crew can safely load the trysail onto the track and raise the sail, leaving the mainsail flaked on the boom.

The compound track bend is determined by installer. Cars must not be under load in curved section.

Furling Mainsail Outhaul Systems

Use furling outhaul cars with in-mast or behind-the-mast furlers on boats up to 13.5 m (45'). Sheave carriers pivot side-to-side to accommodate changing lead angles. Systems have 2:1 purchase and ride on cars with Torlon® ball bearings. A deadend outhaul shackle is included.

Cars have axle-bearing sheaves.

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

HEADSAIL HANDLING SYSTEMS

Carbo Racing Foil

The engineering resins in these strong, lightweight head foils offer significant advancements over the weaker PVC materials used by other manufacturers. The low-friction twin headsail grooves are ultra-smooth, allowing hoists, douses, and headsail changes to be easily and efficiently executed. Impact resistance is unmatched, with far less foil damage from loaded spinnaker poles, especially in cold weather. Heat has little effect on stiffness.

Foils are UV protected and easy for the trimmer to see. For mast-up installation, simply uncoil the foil and snap onto the stay.

Aluminum Chafe Guard

An aluminum chafe guard keeps spinnaker sheets from damaging the foil during high-speed jibes. Testing shows this guard weighs the same as aramid fiber or composite, and is impervious to wear, unlike UHMW plastic tape which wears away quickly. A Harken chafe guard is included free with the purchase of a 7000, 7001, or 7002 kit.

Invictus, Jeanneau Sun Fast 3600, 11.25 m (36'10"), Daniel Andrieu design
© Billy Black

Trim cap

Feeder for smooth hoists:
Funnel-shaped stainless feeder smoothly guides boltrope into headfoil for fast hoists.

Prefeeder: Hardcoat-anodized, PTFE-coated aluminum rollers spin freely on low-friction bushings.

Kit includes prefeeder.

Small Boat Furling Components: Underdeck

Underdeck Furlers

Small Boat underdeck furling units are ideal for sportboats and daysailers from 4.8 - 9 m (16 - 30'). The drum is located beneath the deck, lowering the tack height for maximized sail area. The single through-deck ball joint provides a low-profile, nearly watertight system that aligns the spool to the headstay. Like all Small Boat furlers, the underdeck furler is for furling only, not reefing.

An optional hoistable ball bearing halyard swivel can be installed on the headstay so the sail can be raised or lowered without removing the headstay. See page 158.

Tack Adapter Tangs

Stainless steel tack adapter tangs are used to adapt clevis pin diameters on headstays to the standard clevis pin size that comes on the Harken unit. A third hole accepts lashing to adjust jib luff tension.

Spool pivots to align with load.

Turnbuckle eye on stationary bracket attaches to an underdeck chainplate.

Fairlead feeds line onto the spool.

Small Boat Furling Components: Halyard Swivels

All Harken Small Boat furling components can be purchased individually to mix and match. Systems require a drum and upper swivel. Some are also available as a complete kit. See page 159 for details.

Small Boat units are for furling only, not reefing.

Upper Halyard Swivels

Harken's high-performance 207HP swivel has needle roller thrust bearings that function smoothly under very high loads required at the top end of sportboat fleets, while matching the dimensions of our other 207 units—making an upgrade easy.

Standard upper halyard swivels feature multiple stacked races of ball bearings for low friction rotation under load. Delrin® ball bearings are used for low-load swivels. Torlon® bearings are used in standard and high-load swivels. Shackle or forked tang attachment options are available.

Hoistable Halyard Swivels

An optional hoistable ball bearing halyard swivel can be installed on the headstay so the sail can be raised or lowered without removing the headstay. Swivels are independent of the headstay, which allows the luff to be tensioned separately from the mast rake. Hoistable swivels work along with any standard Harken Small Boat furler.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.
Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Multiple stacked races of Delrin or Torlon ball bearings roll easily under load.

System with hoistable swivel: furlled headsail can be raised/lowered

System without hoistable swivel: furlled headsail remains on stay

Small Boat Furling Components: Drums

All Harken Small Boat furling components can be purchased individually to mix and match. Systems require a drum and upper swivel. See page 158 for swivels. Some systems also available as a complete kit (see below).

Conventional Furling Drums

Harken Small Boat furling systems allow the trailerable cruising or dinghy sailor to set and furl the jib from the cockpit. Drums feature multiple stacked races of Delrin® or Torlon® bearings for smooth rotation under load. Small Boat units are for furling only, not reefing.

Continuous Line-Drive Furling Drum

The continuous line-drive furler is the perfect solution for high-performance skiffs and dinghies that use oversized jibs/gennakers and for staysails on larger boats. Unlike conventional furling drums, the low-profile line-driver never runs out of line, and can completely furl any sized sail. Offset holes in the drive sheave grip line securely, with the stripper arm and feeder working together to prevent line from jamming. The line guard adjusts in 90-degree increments to accommodate attachments to the boat.

Delrin is a registered trademark of E. I. du Pont de Nemours and Company or its affiliates.
Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Continuous line-drive furler features offset holes in the drive sheave to grip line securely.

Small Boat Furling Kits

Harken Small Boat furling systems allow the trailerable cruising or dinghy sailor to set and furl the jib from the cockpit. Small Boat units are for furling only, not reefing.

All kits include the drum and upper swivel. The 483 kit also includes a hoistable halyard swivel. To order components separately, see swivels page 158, drums above.

REFLEX FURLING

In a quickly-evolving environment, the Harken Reflex furling system is pushing free-flying sail furling forward. The patented Reflex system provides sailors confidence that their free-flying asymmetrical spinnakers, gennakers, and code sails will furl completely with speed and control. Pull the furling line and the compact drive unit reacts reflexively to rotate the torsion cable, immediately transferring torque to the head. The head swivel reacts instantly, spinning from top to bottom where perfect furls must start. Reflex furling requires much less luff tension to transfer torque than earlier technology, making it the perfect solution for today's budding cable-less code sail technology which requires about half the luff loads previously required. And whether the Reflex torsion cable is specified, or in applications where the head swivel and a tack plate are sewn directly to the sail, Reflex furling's quick release geometry allows crews to use multiple sails with the same bottom unit.

Three sizes:

Unit 1 is rated at 1.5T MWL for boats to 11 m (36').

Unit 2 is rated at 2.5T MWL for boats up to 14 m (45').

Unit 3 is rated at 4.5T MWL for boats up to 17.4 m (58').

Complete even roll-up, tight wrap

- Low-friction ball bearing tack swivel allows the upper part of the sail to furl first.

Strong, lightweight

- Large diameter hardcoat-anodized 6061-T6 aluminum drive sheave.
- Torlon® ball bearings reduce friction, simplify maintenance.

Holds line securely

- Flexible polycarbonate alloy cowling allows rope to be easily fed into drive sheave without tools; keeps rope captive.
- Offset holes in drive sheave grip rope securely when furling.
- Stripper and feeder work together to prevent furling line from jamming.

Unit 1: 7351.10
Unit 2: 7352.10
Unit 3: 7353.10

Torlon is a registered trademark of Solvay Advanced Polymers L.L.C.

Code Zero sails

- The quick-release T-fitting allows the bottom unit to handle both code zero and asymmetric sails.
- The fixed tack terminal option is used when the torsion cable is inside the luff. A 2:1 soft attach is recommended for increased purchase and luff tension.

Immediate, smooth, controlled furling

- Reflex cable is more torsionally resistant to corkscrewing than the current breed of textile cable.
- All Reflex furlers use braided stainless steel wire filaments over braided textile core to transmit torque to the head swivel for faster furling. Unit 3 furlers use a Dyneema® core, which twists less and handles increased halyard loads without stretching, making them well suited for code zero applications by eliminating need for additional luff cable.
- Smooth polymer cable jacket protects sails against abrasion.

Easily change furled spinnakers

- Quick-release modular T-fitting allows single drive unit to handle multiple sails.
- Each sail has its own torsion cable. Head and tack swivels are permanently fitted to each sail.
- Rolled sail easily disconnects with the pull of one spring-loaded pin; new furled sail slides and locks into T-slot.

Lightweight, low-profile head swivel

- Integral thimble/terminal for torsion cable saves weight; no fork, eye, or pin connections.
- Compact design reduces weight aloft, maximizes luff length.
- Padded cover prevents damage to spars.

Reflex for retrofit

- Both head and tack swivels are available with fork and pin interfaces to allow sails with existing torsion cables finished with eyes to be easily adapted to Reflex furling. Contact Harken for details.

Reflex for cable-less Code sails

- Reflex head swivels and tack plates with integral T-fittings can be sewn directly to today's cable-less sails. The compact solution allows for longer luff lengths. Plus the same drive unit can service the whole inventory. Contact Harken for details.

Ordering Asymmetric Reflex Furling

Use for asymmetric free-flying spinnakers, cruising spinnakers, and gennakers that have a loose positive luff that is longer than the leech.

Boat Requirements

- 1. Spinnaker halyard
- 2. Attachment bail or adjustable tack fitting on a bowsprit or bow extension that allows the furler to clear the forestay and bow pulpit.

1. Determine System Size

Refer to “Typical Boat Length” and “Maximum Sail Area” on unit pages to select the correct size. Note: if you plan to use the system for code zero sails, the loads will be higher so the maximum boat length and sail area are smaller.

2. System Components

The Reflex furling system for asymmetric spinnakers includes all components necessary for one asymmetric spinnaker: one drive unit with snap shackle attachment, tack swivel, head swivel, torsion cable, set of cable clamps.

For each additional sail, order these components separately so you can easily switch furled sails using the quick-release T-slot: one tack swivel, head swivel, Reflex torsion cable, and set of cable clamps.

3. Determine Reflex Torsion Cable Length

Each system includes a length of torsion cable. To purchase the correct system including the right length of cable, determine your Full Hoist Dimension (FH). To do so, measure the distance between the sail attachment points at the top of the rig and the bow fitting or fully-extended bowsprit. Make sure the kit you select includes more cable than your FH measurement.

4. Attachment to Boat

The standard Reflex furling system for asymmetric spinnakers includes a threaded snap shackle adapter. To change to D shackle or soft-attach 2:1 adjuster see chart at right.

5. Ordering Furling Line

The Reflex furling system requires continuous furling line. Talk to your rigger about furling line construction using a structural cover over a nonstructural core. Note: have the rigger capture the aft block in the loop before splicing. The furling line loop can load into stanchion leads and drive unit after it is spliced.

Refer to chart below for line size and length. Double the loop length and add enough length for the overlap in the end-for-end splice.

Standard kit includes

Alternative Attachments to Boat

		
Unit	High-resistance D shackle	Soft-attach 2:1 adapter
1	7351.21	7351.22
2	7352.21	7352.22
3	7353.21	7353.55

Furling Line

Unit	Line Ø		Length of loop (cruisers)	Length of loop (racers)
	in	mm		
1	1/4	6	Measure from furler to aft lead block in cockpit	Use J dimension plus length of bowsprit minus 60 cm (2')
2	5/16	8		
3	3/8	10		

Reflex Furling System Unit 1

For Asymmetric Spinnakers

Typical Boat Length 7.5 - 11 m (25' - 36')

Maximum Sail Area 112 m² (1200 ft²)

Part No.	Description
7351.10.16M	Furling system with 16.15 m (53') cable*
7351.10.18M	Furling system with 18.29 m (60') cable*
7351.10.20M	Furling system with 20.12 m (66') cable*

Optional Parts

7351.21	D-shackle threaded adapter
7351.22	2:1/soft attachment threaded adapter
7351.26	Reflex tack swivel terminal for extra sails
7351.28	Head swivel for extra sails
7371.SPOOL	Reflex torsion cable (spool) 8 mm x 305 m (5/16" x 1000')
7371	Reflex torsion cable (ordered by the foot) for extra sails
7357	Cable clamp (set of 2) for extra sails
7356	Lead block kit**
7355	Outboard fairlead

*Includes: drive unit, head swivel, Reflex tack swivel terminal, snap shackle threaded adapter, Reflex torsion cable, and clamps. **Fairlead kit includes 2 fairleads, fairlead with cleat, and aft block.

Reflex Furling System Unit 2

For Asymmetric Spinnakers

Typical Boat Length 10 - 14 m (34' - 45')

Maximum Sail Area 168 m² (1800 ft²)

Part No.	Description
7352.10.20M	Furling system with 20.12 m (66') cable*
7352.10.23M	Furling system with 22.87 m (75') cable*
7352.10.25M	Furling system with 25 m (82') cable*

Optional Parts

7352.21	D-shackle threaded adapter
7352.22	2:1/soft attachment threaded adapter
7352.26	Reflex tack swivel terminal for extra sails
7352.28	Head swivel for extra sails
7372.SPOOL	Reflex torsion cable (spool) 10 mm x 305 m (3/8" x 1000')
7372	Reflex torsion cable (ordered by the foot) for extra sails
7358	Cable clamp (set of 2) for extra sails
7356	Lead block kit**
7355	Outboard fairlead

*Includes: drive unit, head swivel, Reflex tack swivel terminal, snap shackle threaded adapter, Reflex torsion cable, and clamps. **Fairlead kit includes 2 fairleads, fairlead with cleat, and aft block.

Ordering Code Zero Reflex Furling

The Reflex torsion cable is not designed to accept luff loads associated with earlier code sail technology. It does, however, transfer the necessary torque to the head swivel for complete furling twice as effectively as any system we have tested—at far lower loads. If high luff loads will be encountered, combine a tension handling line with the Reflex torsion cable.

To furl a code zero sail that has a non-Harken torsion cable sewn into the luff, use either the thimbles or the eyes to secure to the head swivel and fixed tack terminal.

Optional Parts

Reflex Furling System Unit 1

For Code Zero Sails
Typical Boat Length 6.7 - 10 m (22' - 32')
Maximum Sail Area 60 m² (650 ft²)

Part No.	Description
7361.10	Code zero furling system*
Optional Parts	
7351.20	Snap shackle threaded adapter
7351.21	D-shackle threaded adapter
7351.27	Reflex fixed tack terminal for extra sails
7351.28	Head swivel for extra sails
7371.SP00L**	Reflex torsion cable (spool) 8 mm x 305 m (5/16" x 1000')
7371**	Reflex torsion cable (ordered by the foot) for extra sails
7357**	Cable clamp (set of 2) for extra sails

*Includes: drive unit, head swivel, Reflex fixed tack terminal, 2:1 threaded adapter.
**Order Reflex torsion cable and clamp set for 7361.10 to improve furling.

Reflex Furling System Unit 2

For Code Zero Sails
Typical Boat Length 9 - 12 m (30' - 40')
Maximum Sail Area 84 m² (900 ft²)

Part No.	Description
7362.10	Code zero furling system*
Optional Parts	
7352.20	Snap shackle threaded adapter
7352.21	D-shackle threaded adapter
7352.27	Reflex fixed tack terminal for extra sails
7352.28	Head swivel for extra sails
7372.SP00L**	Reflex torsion cable (spool) 10 mm x 305 m (3/8" x 1000')
7372**	Reflex torsion cable (ordered by the foot) for extra sails
7358**	Cable clamp (set of 2) for extra sails

*Includes: drive unit, head swivel, Reflex fixed tack terminal, 2:1 threaded adapter.
**Order Reflex torsion cable and clamp set for 7362.10 to improve furling.

Ordering Jib Reefing & Furling

1. Choose Furler Type

The table below is based on sailing style and approximate boat size.

This table is only a guideline. Do not use it to determine unit size.

Size is based on the headstay and clevis pin diameters listed on unit pages.

Comparison Chart

	MKIV Racers/performance cruisers	ESP Cruisers
Note: Typical boat lengths are listed as a guideline but are not the determining factor. Check with Harken if your length varies.		
Typical boat lengths	Unit 0: 6.5 – 9.1 m (22 – 30') Unit 1: 8.5 – 11 m (28 – 36') Unit 2: 10 – 14.2 m (35 – 46') Unit 3: 13.7 – 18.3 m (45 – 60') Unit 4: 19.8 – 24.4 m (65 – 80')	Unit 0: 6 – 8.5 m (20 – 28') Unit 1: 8 – 10.7 m (26 – 35') Unit 2: 10.4 – 14 m (34 – 46') Unit 3: 13.7 – 18.6 m (45 – 61')
Foils	Double-groove Air foil Stainless steel feeder	Single-groove round foil Stainless steel feeder
Halyard and tack swivel	Independent swivels for improved sail shape	Fixed
Drum	Removable split drum for racing	Fixed
Line	Included on Units 0, 1, 2	Not included

2. Determine Unit Size

Size is based on the headstay and clevis pin diameters listed on unit pages.

Choose between unit sizes when diameters are shared by considering stay length and typical boat size recommendations. Contact Harken if you have any questions.

3. Determine if Additional Foils Needed

Use the I and J measurements to determine the length of the headstay. If the existing headstay is longer than the standard length listed under Headstay Length on unit pages, order additional foils and connectors. In some cases one or two extra foils and connectors may be necessary.

4. Determine Toggle, Link Plate, or Leg Kit

Use short toggle (MKIV) or short leg kits (ESP) for maximum luff length. For ESP, use long or medium leg kits to accommodate a turnbuckle or to clear an anchor.

5. Choose Lead Block Kit and Accessories, ESP - Order Line

Harken recommends equipping every furling system with a ratchet lead block kit. Other parts on the **Furling Accessories** page (189 - 190) include equipment for halyard management and racing hardware for faster sail changes. Order line for ESP furlers.

6. Prepare Sail and Headstay

Have a luff tape added to your genoa. Match the sail length to the stay length minus the height of the halyard swivel and lower unit. See sizing information on page 183.

All MKIV and those ESP furlers with long or medium leg kits install over the existing turnbuckle. The turnbuckle is accessible for adjustment by raising the drum. See the **MKIV & ESP Toggle & Rigging Options** on page 167 to determine toggle and rigging requirements. Some headstays will require cutting and shortening to fit Harken toggle. Sometimes only the lower threaded turnbuckle fitting needs changing. Check with a professional rigger on stay condition before reusing stay.

For all units, rod rigging requires a Harken rod adapter stud. It must be cut and coldheaded by an authorized rod service center.

7. Contact

If you have questions, please contact your dealer or Harken Technical Service.

Toggle & Rigging Options

Use these rigger-supplied options to fit Harken toggles and leg kits shown below.
Harken toggle and leg kit assemblies sold separately. See unit pages.

Rigger
Supplied

Harken

Boats with larger clevis pins use special Harken lower stud fitting.

MKIV JIB REEFING & FURLING

Nothing beats the MKIV Jib Reefing & Furling line for effortless headsail control and great sail shape for optimal speed. With its ability to reef, simply furl and unfurl instead of changing sails to suit conditions, reduce speed, or gain visibility off the bow. Split drum removes for racing. Five sizes fit boats from 6.5 - 24.4 m (22' - 80').

Low-friction efficiency for easy furling and reefing

- Multiple rows of Torlon® ball bearings in high-load areas minimize friction.
- Stacked bearing races evenly distribute radial and thrust loads; drum and halyard swivel turn freely under load.
- Foils rotate around headstay so headstay load is isolated from the furling unit for easy furling.
- Large inner spool diameter increases mechanical advantage for powerful reefing and furling.

Stands up to sun, salt, and time

- Aluminum line guard, torque tube, and swivels deep-saturation hardcoat-anodized, UV-stabilized for durability.
- Line guard polyurethane-coated for wear protection.
- Specially formulated low-stretch black line is abrasion and UV-resistant; standard on units 0, 1, 2.
- Aerodynamic, clear-anodized aluminum Air foils handle extreme reefing loads.
- Triple-interlock foil joints withstand years of torque loading: foil connectors geometric shape interlocks with foil; secures with syringe-injected adhesive; screws provide final lock.

Foil joints

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Improved sail shape and boat control

- Independent halyard and tack swivels furl sail center before head and tack for improved sail shape when reefed.
- Lightweight aluminum halyard swivel saves weight aloft to reduce pitching and heeling.

Split drum removes easily for racing

- Line guard and spool remove easily for use with full-hoist sails.

Fast hoists, douses, reefs, and sail changes

- Precision-extruded, double-groove Air foils for smooth sail handling and fast sail changes.
- Stainless steel feeder allows fast singlehanded hoist and sail changes.

Designed for easy installation

- Small outside drum dimension fits narrow bows or belowdeck.
- C-shaped open connectors with low-friction plastic isolators easily slip onto headstay wire and into foil.
- Drum assembly fits over existing turnbuckle allowing easy length adjustment. Harken toggle assembly accepts standard turnbuckle using swage, rod, Norseman, or STA-LOK® terminals.
- Eye-jaw toggle flips for fork or tang chainplate installation.

Accessories

- Lead block kit: Easy-to-mount ball bearing blocks lead line aft; fit 25 mm (1") stanchions.
- Halyard deflector: Install above the foil to prevent halyards from wrapping around the foil when furling.

Easy to maintain

- Bearings require no lubrication or isolating seals.

- Stainless steel link plates raise the drum and fit over existing turnbuckle, resist scratches, and can be easily repolished.

MKIV UNDERDECK JIB REEFING & FURLING

Harken's MKIV Underdeck Jib Reefing & Furling line is the perfect solution for sailors who want an aerodynamic system with a minimal amount of equipment above deck. The underdeck furler provides a low-friction, clean layout solution that minimizes windage, while uncluttering the bow for easy anchor access. Offered in four sizes for boats from 6.7 – 18.3 m (22' – 60').

Unit 1
Unit 2
Unit 3

Unit 0

Low-friction efficiency for easy furling and reefing

- Ball bearings between center hub and deck bearing, and main shaft reduce friction; drum and halyard swivel turn freely under load.
- Foils rotate around headstay so headstay load is isolated from the unit for easy furling.

Stand up to sun, salt, and time

- Units 1, 2, 3: Aluminum line guard, torque tube, and swivels hardcoat-anodized, UV-stabilized for durability. Line guard is polyurethane-coated for additional corrosion protection. Threaded height adjuster uses dissimilar metals (stainless steel and bronze) to prevent galling.
- Unit 0: One-piece integrated aluminum deck bearing and line guard hardcoat-anodized for durability and corrosion resistance.
- Aerodynamic, clear-anodized aluminum Air foils handle extreme reefing loads.
- Triple-interlock foil joints withstand years of torque loading: foil connector's geometric shape interlocks with foil; secures with syringe-injected adhesive; screws provide final lock.

Foil joints

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

172 STA-LOK is a registered trademark of STA-LOK Terminals.

Improved sail shape and boat control

- Independent halyard and tack swivels furl sail center before head and tack for improved sail shape when reefed.
- Lightweight aluminum halyard swivel saves weight aloft to reduce pitching and heeling.
- Tack sits at deck level, lowering the tack height for maximized sail area.
- The torque tube houses a full-length turnbuckle for optimal mast rake and tension adjustment.
- Units 1, 2, 3: High-strength universal joints articulate, allowing ample headstay sag when sailing downwind.
- Unit 0: Articulating ball joint eliminates universal joint to reduce weight, simplify maintenance.

Fast hoists, douses, reefs, and sail changes

- Precision-extruded, double-groove Air foils for smooth sail handling and fast sail changes.
- Stainless steel feeder allows fast singlehanded hoist and sail changes.

Unit 1 and larger

Unit 0

Unit 1 and larger

Unit 0

Designed for easy installation

- Units 1, 2, 3: Self-locking threaded height adjuster for correct fit between chainplate and deck.
- Unit 0: Does not require height adjuster; furler and headstay independent of each other allowing flexible installation options.
- Torque tube fits over existing turnbuckle allowing easy length adjustment. Hub assembly toggle accepts standard turnbuckle using swage, rod, Norseman, or STA-LOK® terminals.

Belowdeck drum fits narrow bows

- Small outside drum diameter.

Foil connectors

- C-shaped open connectors with low-friction plastic isolators easily slip onto headstay wire and into foil.

Easy to maintain

- Bearings require no lubrication or isolating seals.
- Through-deck bearing into underdeck compartment provides a low profile, nearly watertight system.

ESP JIB REEFING & FURLING

Fewer components make this affordable furling system a favorite of cruising sailors. These furlers are quick to assemble and easy to use, while providing the same styling, durability, and low-maintenance bearing system of Harken's MKIV line. Install an ESP furler and trim safely from the cockpit when it blows; unfurl instead of motoring when it's light for a great day of sailing. Four sizes fit boats from 6 - 18.6m (20' - 61').

Low-friction efficiency for smooth furling and reefing

- Three rows of large-diameter Delrin® ball bearings minimize friction.
- Round foil withstands extreme reefing loads; furls more easily than flat foil shapes.

Stands up to sun, salt, and time

- Hard Lube-anodized aluminum hub; fiber-reinforced composite one-piece drum, spool, and guard.
- Stainless steel guard posts for impact and corrosion resistance.
- Stainless steel feeder and clear-anodized aluminum foils for durability.
- Tough foil joints withstand years of torque loading; foil connectors and geometric shape interlocks with foil and secures with screws.

Foil joints

Adjust drum height to fit boat or sailing style

- Leg kits adjust drum height to clear anchor, increase visibility, or bring sail closer to deck.
- Long or medium leg kits: Use with furlers with turnbuckles using swage, Norseman, or STA-LOK® terminals; to select correct size, refer to unit pages. Medium leg kit fits a variety of turnbuckles: refer to height chart on unit pages.
- Short leg kit: does not fit turnbuckle; attach to marine eye at bottom of stay for increased sail area.

Designed for easy assembly

- Foils slip over standard marine eye and headstay wire for easy installation — no need to cut wire.
- Cut only top foil to fit; adjustable bottom foil fine-tunes system length.
- Attach sail to tack and head shackle; sail shape controlled by halyard tension.

Easy to maintain

- Bearings require no lubrication or isolating seals.

Lead block kit

Halyard deflector

Furling line

Accessories

- Lead block kit: Easy-to-mount ball bearing blocks lead line aft; fit 25 mm (1") stanchions.
- Halyard deflector: Install above the foil to prevent halyards from wrapping around the foil when furling.
- Line: Specially formulated low-stretch black line is abrasion and UV-resistant for units 0, 1, 2.

Use 12 mm (7/16") double braid furling line not supplied by Harken. To figure line length use 2 X boat length.

*Add to length for longer leg kits. Medium leg .215 m (8 1/2") Long leg .37 m (14 1/2"). **Use without turnbuckle.

‡Use with conventional turnbuckle. Check maximum turnbuckle length for medium leg kit.

ELECTRIC JIB REEFING & FURLING

A Harken Electric Jib Reefing and Furling system is a simple solution for sailors looking to add push-button comfort and safety to their cruiser. These sleek free-rolling systems are easy to install and allow crew to quickly furl and reef from the cockpit, while maintaining sail shape and optimal speed. For boats from 10.6 - 18 m (35' - 60').

Easy to furl

- Stacked Torlon® bearing races in the halyard swivel evenly distribute radial and thrust loads to ball bearings.

Stands up to sun, salt, and time

- Torque tube, motor, and gear housing are deep-saturation hardcoat-anodized, UV-stabilized aluminum for durability.
- The sculpted gearbox and streamlined motor housing are sealed with high-quality lip seals and O-rings.
- Stainless steel link plates resist scratches from anchor and are easily repolished.
- Hardened steel gears are permanently lubricated.
- Triple-interlock foil joints withstand years of torque loading: foil connectors geometric shape interlocks with foil; secures with syringe-injected adhesive, screws provide final lock.

Foil joints

Improved sail shape and boat control

- Independent halyard and tack swivels furl sail center before head and tack for improved sail shape when reefed.
- Lightweight aluminum halyard swivel saves weight aloft to reduce pitching and heeling.

High-torque, high-efficiency motor consumes little power

- Permanent magnet design motor gives off little heat; reduces condensation to prevent electrical shorts.
- Reversible drive uses a high reduction worm gear to prevent sails from unfurling under load.

Emergency manual operation in case of power loss

- Use supplied crank handle or cordless drill adapter, or use standard winch handle.

Motor housing

Foil connectors

Turnbuckle adjustment

Electric system components included

Simple to install or upgrade from manual to electric

- Vertical motor's streamlined housing fits narrow pulpits, clears anchor tackle, and provides low windage.
- C-shaped connectors slip over headstay without feeding wire through connector.
- Lower unit fits over existing turnbuckle allowing easy length adjustment. Harken toggle assembly accepts standard turnbuckle using swage, rod, Norseman, or STA-LOK® terminals.
- Unit easily connects to boat's existing electrical system.
- Easy upgrades from the MKIV Unit 2 and Unit 3 manual units with the Harken Upgrade Kit.

Options

- Upgrade kits available for manual-to-electric conversion.
- Systems available in 12- or 24-volts; dual-function switch and a 12- or 24-volt control box and circuit breaker included.

Unit 2E Typical Boat Length 10.6 - 14.2 m (35' - 46')

MKIV HYDRAULIC JIB REEFING & FURLING

Powerful performance packed into a compact, slim profile makes our hydraulic headsail furlers the ultimate in push-button sail control. Perfect for cruisers and performance cruisers, these free-rolling systems fit wire sizes from 11 - 25 mm (7/16" - 1"); rod from -22 to -115 or equivalent fiber stays. Parts and service are available around the world.

Low-friction efficiency for easy furling and reefing

- Multiple rows of Torlon® ball bearings in high-load areas minimize friction.
- Stacked bearing races evenly distribute radial and thrust loads; halyard swivel turns freely under load.

Standard transmission reduces mechanical friction and pressure loss

- Engages/disengages the motor's powered and manual gear drive for efficient operation.
- Worm gear drive prevents backwinding; unloads hydraulic motor when reefed.

High-strength, lightweight

- Hardcoat-anodized, UV-stabilized aluminum torque tube, motor, and gear housing.
- Aerodynamic, clear-anodized aluminum Air foils handle extreme reefing loads; carbon fiber foils available on request.
- Triple-interlock foil joints withstand years of torque loading; foil connectors geometric shape interlocks with foil; secures with syringe-injected adhesive; screws provide final lock.

Foil joints

Carbon foil

Improved sail shape and boat control

- Independent halyard and tack swivels furl sail center before head and tack for improved sail shape when reefed.
- Lightweight aluminum halyard swivel saves weight aloft to reduce pitching and heeling.
- Unit 3 uses a hard shackle. Units 4 through 6 lashed on with Spectra® line; patented system evenly distributes loads.
- Lower unit's compact size brings sail's tack close to deck.

Fast hoists, douses, reefs, and sail changes

- Precision-extruded, double-groove Air foils for smooth sail handling and fast sail changes.
- Stainless steel feeder allows fast single-handed hoist and sail changes.

Emergency manual operation in case of power loss

- Use supplied crank handle or cordless drill adapter, or use standard winch handle.

Designed for easy installation

- C-shaped open connectors with low-friction plastic isolators easily slip onto headstay wire and into foil.
- Lower unit fits over existing turnbuckle allowing easy length adjustment. Harken toggle assembly accepts standard turnbuckle using swage, rod, Norseman, or STA-LOK® terminals.
- Lower toggle assembly fixes at 90-degree intervals, accepts any chainplate direction.
- Motor has no case drain line for easier installation; fewer hoses.

Easy to maintain

- Bearings require no lubrication or isolating seals.
- Hardened steel gears and bearings in lower unit permanently lubricated in oil bath.
- Fewer parts easier to assemble and service.

Options

- A hydraulic cylinder installed below unit adjusts headstay, keeps luff tension constant. This prevents halyard and tack attachments from overloading when the headstay is adjusted.

Q5 Quintessential, Yachting Developments

Furling Lead Blocks

Harken recommends equipping jib reefing and asymmetric/code zero furling systems with lead blocks for safe furling from the cockpit. Lightweight, UV-stabilized Carbo blocks run exclusively on ball bearings for fast trimming under any load. Furling leads are offered separately or in complete kits.

MKIV and ESP Jib Reefing and Furling Leads

A 57 mm Carbo ratchet maintains tension on the line so the unit furls smoothly and easily. The outboard assembly allows the line to travel outside of the stanchions, keeping the sidedecks clear. Inboard block assemblies are available for the bow pulpit, to handle two lines, for continuous line furlers, or for cutter-rigged boats with two furlers. Ball and socket bases align blocks for smooth leads aft.

Reflex Asymmetric and Code Zero Furling Leads

Two stanchion leads forward guide line outboard to keep sidedecks clear. A stanchion lead aft features a double Harken Cam-Matic for cleating continuous furling line. A Carbo T2 block with shockcord attaches aft of the double cam to keep line in place for easy access.

**Kit includes 2 x 7355 / 1 x 7359 / 1 x 7360.

Outboard leads allow furling line to travel outboard of the stanchion to keep the sidedeck clear.

Furling Accessories

Harken offers halyard restrainers and halyard deflectors. The halyard restrainer installs on the mast near the top of the foil to keep the line against the mast, preventing halyard wrap when furling. The halyard deflector installs on the stay above the foil system, preventing the jib halyard (and additional halyards) from wrapping around the foil.

Also available are stanchion-mount bases for Carbo and Classic blocks, as well as prefeeders and snap shackles to facilitate fast sail changes.

SnubbAir

It looks like a winch. It mounts like a winch. It cranks like a winch. It's not a winch.

First designed to solve a deck layout challenge unique to the J/70, the Harken SnubbAir might look like a smaller, more efficient version of the winch it replaces. But the product has so many potential applications it defies classification as a winch.

It could act more like a really large ratcheting foot, cheek block, or even a ratcheting line diverter in the pit. The SnubbAir provides lots of line-holding power even without a winch handle. That muscle could become very popular on an A Scow or a powered-up sport boat where the spinnakers can be more than a handful. Even better, you can just flip the sheet off the drum and jibe. If you need even more holding power, wrap the sheet around the SnubbAir twice or use a winch handle with the optional adapter.

SnubbAir comes with four integral threaded studs placed to precisely match the bolt pattern of the B8A winch on the J/70 deck. Start-to-finish, swapping out winches for SnubbAirs takes less than 10 minutes. All washers and Nylok® nuts required for mounting are included.

Installation video

Use the optional winch handle adapter to crank the SnubbAir like a winch.

The SnubbAir is smaller and lighter than the winch it replaces.

Ordering Winches

1. Choose Drum Material, Speed & Style

Aluminum: aluminum Radial winches in 1-, 2-, and 3-speed self-tailing or plain-top.

Aluminum classic single-speed, plain-top winches in sizes 6 and 8; 2- and 3-speed self-tailing winches sizes 980 and up in aluminum or aluminum/stainless.

Chrome: Chrome Radial winches feature chrome drums with black or white composite bases and tops; 1-, 2-, and 3-speed self-tailing.

All-chrome Radial winches have chrome bases, drums, and tops; 1-, 2- and 3-speeds; self-tailing or plain-top.

Stainless Steel: stainless steel winches have stainless bases, drums, and tops; 2-, and 3-speed self-tailing; 4-speed winches in some larger sizes.

Bronze: bronze Radial winches in 1-, 2-, and 3-speeds; self-tailing or plain-top styles.

Carbon Fiber: carbon fiber winches in 2- and 3-speed self-tailing or top-cleating.

To order large cruising, Megayacht, and Grand Prix racing winches, please contact Harken.

Powered Winches: choose electric or hydraulically driven winches and components. To order hydraulic winches, please contact Harken.

2. Determine size

The **Sizing Chart** selects winches for different applications and rig dimensions. If unsure of the dimensions, use the **Typical Dimensions** graphs. To order large Grand Prix and Megayacht winches, please contact Harken.

3. Choose Ball Bearing Handle

Plain or lock-in handles in chromed bronze, bronze, and aluminum; Speedgrip and standard styles in 203 and 254 mm (8 and 10") lengths.

Rig Dimensions

RADIAL LINE WINCHES

Harken Radial Line winches have successfully balanced the need for a secure grip and line longevity with smooth, controlled easing while under load. Details sailors will appreciate: smaller winches that carry higher loads, stress-free seasonal maintenance, and one-person installation with easy upgrades to power. Nine sizes in multiple styles and finishes: aluminum, chrome, and bronze; 1-, 2-, and 3-speed self-tailing; manual, electric, or hydraulic drives.

Maximum holding power with minimum line wear

- Nonabrasive diagonal ribs on gripping surface hold line securely and reduce line wear; ribs shaped for each winch size and drum material.

Smooth, controlled easing

- Patented angle of ribs drives line wraps down when easing to keep them on area of drum that provides best control.

High-strength, lightweight

- Weight savings of 25 to 50 percent compared to Harken Classic winch line.
- High-strength composite roller bearings and bushings reduce friction under load.
- Load-carrying gears and pins are 17-4 PH stainless steel for strength, corrosion resistance.

Adjustable stripper arm integrated into winch top for safer operation

- Stripper arm completely covers rotating winch top, preventing fingers and clothing from catching in moving parts.
- Adjusts to multiple positions after the winch is mounted to optimize line exit.
- Shaped to smoothly feed line in and out of self-tailing jaws.

Power-grip jaws shaped for easy line entry, optimum hold

- Upper jaw adjusts under line pressure; accepts a variety of line sizes.
- Teeth grip evenly with or without load.

Simple to install, easy maintenance

- Patented mounting system for fast, one-person installation without removing drum.
 - a. Snap off the skirt at the base of the winch.
 - b. Slide bolts through the slots in the winch base and snap the plastic skirt back on.
 - c. Place the stud bolts into the predilled holes on the deck and tighten from belowdeck.
- Snap-fit design keeps bearings captive when drum is removed for maintenance.
- Easy to disassemble for service on deck; socket, washer, and screw-top snap-fit together for mistake-free reassembly.
- Composite roller bearings don't require lubrication.

Powered Options

- Electric: vertical-mount motors; horizontal-mount motors offered with right- or left-mount option.
- Hydraulic: vertical-mount motor.

Easy upgrade from manual to power

- Manual winches easily convert to powered using patented conversion method.
- No adapter plate required; identical stud pattern to mount winches of the same size without drilling new holes in deck.

- A predilled hole in deck by builder simplifies manual-to-electric conversion; removable gaskets offered to seal holes until upgrade is made.

Energy-efficient motors accomplish more work per unit of electricity consumed

- Motors attach to central drive shaft and drive through winch gears for two-speed mechanical advantage.
- Low-power first gear for fast trimming; higher-power second gear for fine-tuning loaded sheets.

- Efficient design allows smaller motor size.

Manual override in case of power loss

- Harken locking handle inserted into an unloaded winch automatically disconnects motor gear for manual operation.

Aluminum & Chrome Radial Winches

About Radial winches: see feature pages at beginning of this section.

Series 15 and 20 winches use composite bushings to handle high loads in a small package.

WINCH Q&A

WHY DOES MY CHROME RADIAL LINE WINCH HAVE A DIFFERENT GRIP PATTERN THAN AN ALUMINUM RADIAL LINE WINCH?

Chrome has a more slippery finish than aluminum, so the ribs on chrome winches are spaced closer together to increase friction. This optimizes your grip for trimming as well as for easing the sail in a smooth, controlled manner.

Electric & Hydraulic Motors

Specify power type, material, voltage, and motor configuration when ordering. See part number explanation.

About Radial winches: see feature pages at beginning of this section.

Harken electric and hydraulic motors attach to the central drive shaft and drive through the winch gears for a two-speed mechanical advantage—the low-power first gear for fast trimming, the higher-power second gear for fine-tuning loaded sheets. This results in reduced battery drain and a more efficient motor on the electric version. The energy-efficient hydraulic version is also smaller, reducing weight and cost.

H = Horizontal

V = Vertical

UniPower Winches

The UniPower is a single-speed winch that combines the advantages of a low-profile manual winch with the power of a 12- or 24-volt, low-amp-draw motor. What makes it unique is that the motor is partially imbedded inside the drum, so that it extends only 105 mm (4 1/8") below the winch base—a critical feature for small boats where space under the cabintop is limited.

About Radial winches: see feature pages at beginning of this section.

Low-profile electric motor saves headspace.

Eckernförde, Saare 38, 11.40 m, Karl-Johan Stråhlmann, Saare Yachts

Specify voltage when ordering. Harken recommends the single function digital switch DSSBK4 and circuit breaker HCP1717. Sold separately.

Rewind Electric Winches

The Rewind Radial electric winch is the latest in Harken’s “easy sailing” solutions for cruisers, and the first winch of its kind in the marine market. Activated remotely by twin in/out buttons, the Rewind safely eases and trims highly-loaded sails in both directions without ever taking the line out of the self-tailer.

Like all Harken electric winches, the Rewind operates like a normal 2-speed electric winch. A simple flip of the red knob on the winch base turns on the rewind feature. A spring-loaded arm of investment-cast stainless steel funnels and keeps line captive as it feeds in and out of the self-tailer as the sail is adjusted with fingertip control.

Available in 12- and 24-volts.

About Radial winches: see feature pages at beginning of this section.

A Harken locking handle inserted into an unloaded winch automatically disconnects the motor gear for manual operation.

Activated remotely by twin in/out buttons, the Rewind winch safely eases and trims highly-loaded sails in both directions without ever taking the line out of the self-tailer.

A simple flip of the red knob on the winch base turns on the rewind feature.

PERFORMA WINCHES

Harken Performa winches combine the high-efficiency of the Radial line with the sandblasted grip of Harken carbon-fiber racing winches for powerful hybrids. Optimized to handle the high-strength line used on sport-boats and performance cruisers, Performa winches are a great solution for crew who don't wish to invest in carbon winches or who need racing winches in smaller sizes. Winches come in self-tailing, plain-top, or Quattro styles; manual, electric (12- or 24-volt), or hydraulic drives. Available in sizes 20 to 80 to complement Harken's carbon line.

Maximum holding power for high-tech line

- Sandblasted drums and ribs optimized for halyard and sheeting applications using small-diameter, high-strength line.

Trim and ease sails quickly and easily

- Patented angle of ribs drives line wraps down when easing to keep them on area of drum that provides best control.
- Transfer high loads to the winch with fewer wraps.

High-strength, lightweight

- Lightweight aluminum drum features an integrated skirt.
- High-strength composite roller and ball thrust bearings reduce friction under load.
- Load-carrying gears and pins are 17-4 PH stainless steel for strength, corrosion resistance.

Quattro model for boats requiring extremely fast winches

- Handles large asymmetrical spinnakers; power to trim genoa upwind.
- 2 speeds + 2 drum diameters = 4 line speeds.

Power-grip jaws shaped for easy line entry, optimum hold

- Narrow composite jaws ensure superior holding power on small-diameter, high-strength line.
- Lower jaw adjusts under line pressure; accepts a variety of line sizes.
- Teeth grip evenly with or without load.

Simple to install, easy maintenance

- Patented mounting system for fast, one-person installation without removing drum.
- Snap-fit design keeps bearings captive when drum is removed for maintenance.
- Easy to disassemble for service on deck; socket, washer, and screw-top snap-fit together for mistake-free reassembly.
- Composite roller bearings don't require lubrication.

Adjustable stripper arm integrated into winch top for safer operation

- Stripper arm completely covers rotating winch top, preventing fingers and clothing from catching in moving parts.
- Adjusts to multiple positions after the winch is mounted to optimize line exit.
- Shaped to smoothly feed line in and out of self-tailing jaws.

Powered Options

- Electric: vertical-mount motors; horizontal-mount motors offered with right- or left-mount option.
- Hydraulic: vertical-mount motor.

Easy upgrade from manual to power

- Manual winches easily convert to powered using patented conversion method.
- No adapter plate required; identical stud pattern to mount winches of the same size without drilling new holes in deck.

- A predrilled hole in deck by builder simplifies manual-to-electric conversion; removable gaskets offered to seal holes until upgrade is made.

Energy-efficient motors accomplish more work per unit of electricity consumed

- Motors attach to central drive shaft and drive through winch gears for two-speed mechanical advantage.
- Low-power first gear for fast trimming; higher-power second gear for fine-tuning loaded sheets.

- Efficient design allows smaller motor size.

Manual override in case of power loss

- Harken locking handle inserted into an unloaded winch automatically disconnects motor gear for manual operation.

Performa Winches

About Performa winches: see feature pages at beginning of this section.

CLASSIC PLAIN-TOP

PLAIN-TOP

Use plain-top winches on sportboats where sails require frequent trimming. Plain-top winches are best handled by two crew—one to trim and one to tail the line.

SELF-TAILING

Self-tailing winches have narrow composite jaws to ensure superior holding power on small-diameter line. The self-tailing mechanism on the winch means that one crew member can quickly and easily trim or raise sails.

QUATTRO

Use Quattro models for boats requiring extremely fast winches. Quattros handle large asymmetrical spinnakers and provide power to trim genoa upwind. 2 speeds + 2 drum diameters = 4 line speeds.

*When racing, insert a racing disconnect rod to operate the winch manually. Performa disconnect rods are also available for Radial winches.

Harken electric and hydraulic motors attach to the central drive shaft and drive through the winch gears for a 2-speed mechanical advantage—the low-power first gear for fast trimming, the higher-power second gear for fine-tuning loaded sheets. This results in reduced battery drain and a more efficient motor on the electric version. The energy-efficient hydraulic version is also smaller, reducing weight and cost.

ELECTRIC HORIZONTAL

ELECTRIC VERTICAL

HYDRAULIC

Electric Components

Battery voltage and winch size determine which components you should use. For winches size B980 and above, contact Harken for appropriate components. All components sold separately.

Each electric winch requires one control box, one circuit breaker, and two analog switches or one Digital System Switch. All new electric Radial, Performa, and captive winches are supplied with the appropriate dual-function control box. For replacement or retrofit control boxes, contact Harken.

Hydraulic winches require two analog switches or one Digital System Switch.

Analog Switches

Harken offers simple, waterproof switches for electric and hydraulic winches. Order two switches for each winch.

High-Amperage Circuit Breakers

Harken offers four panel-mount, high-amperage circuit breakers. They are compact, waterproof, weather-resistant, and ignition-protected. Circuit breakers are available for 12- or 24-volt DC systems.

Dual-Function Control Boxes

This labor-saving control box with built-in load controller combines two products into one, reducing wiring and connection points by almost half, greatly simplifying installation of Harken electric winches. Supports Digital System Switch or analog switches. A mix of switches is not supported.

System wiring may be different depending on winch size and installation. Please refer to the user manual for additional connection information.

Digital System Switches

Harken Digital System Switches in dual and single-function models set the standard for the reliable operation of electrically-powered yacht systems.

To accomplish this, safeguards have been built into the systems.

- The waterproof control button translates electrical information into a binary code that won't allow the system to start without the signals being verified by the decoder. An analog system sends continuous electrical information directly to the powered device which means damage to the wiring or water ingress could result in unsafe activation.
- Watertight seals are never exposed, eliminating potential damage from sun and prolonged use.
- Underneath each control button, two command switches must work in unison before a signal is sent.

Harken Digital System Switches resist impact, wear, and abrasion. A unique adhesive mounting system is available where drilling is undesirable. The product is offered in black polyamide resin or stainless steel. Integrated lighting provides low-light visibility.

Dual-function

Two-function control buttons housed in a single space-saving system—1st/2nd gear for winches, up/down for anchors, in/out for furling.

Single-function

Single control button—Pairs with the Harken UniPower single-speed winch used by cruisers.

Active buttons:
1st/2nd gear for
winches, up/
down for anchors,
in/out for furling.

CLR™ Mooring Winch

DAME
CATEGORY WINNER
2018

The Harken® CLR™ mooring winch is a flush-stowing, deck-mounted powered winch for both sail and power yachts featuring geometry and mechanical characteristics never before seen.

No other retracting, flush-mounted winch has offered the power-for-size ratio offered by the CLR. It stows completely belowdeck and occupies 40% less horizontal and less than 50% of the vertical space required by the previous market leaders. The CLR weighs just 33% of its competition while delivering comparable mechanical advantage.

This compact form makes it possible for yachts to mount two CLR winches at the stern quarters and one in the bow. Together, three CLR's can reduce the need for engine and thruster power while helping crews moor stern-to-dock.

The CLR employs unprecedented winch drum geometry. Five aluminum columns rotate together around a center axis. Working together, they create a very light drum that provides substantially more line-holding power and low-speed torque than would be available using a traditional drum.

The CLR offers internal LED lights at the bottom of each column for use in low-light mooring situations. Deck plates are available in aluminum, chrome, or wood grain finishes.

Harken produces two versions of the CLR: 600 kg (1322.8 lb) max pulling force for boats from 13.7 m - 18.2 m (44.9' - 59.7') and 1200 kg (2645.5 lb) for boats from 18.2 m - 27.4 m (59.7' - 89.9'). It is available in 12 or 24 volt electric or hydraulic power.

LED lights are integrated at the bottom of each column for low-light mooring situations.

Winch size	Max line speed*		Weight				Maximum working load	
	ft/min	m/min	Aluminum**		Chrome**		lb	kg

Aluminum Powered Winches

Harken aluminum winches are hardcoat-anodized to resist corrosion. Anodization colors can be customized to match your yacht's aesthetics. Winches are also available with carbon fiber tops and skirts.

Harken megayacht winches are kings of power and speed that will set you on the path to fast, efficient sail handling. Contact a Harken project manager to configure optimal gear ratios, electric or hydraulic motor selection, and power settings for your application, ensuring your winches perform at full potential—from superfast line speeds needed for jibes, to hoisting a wet headsail to the top of the mast in fast gear.

Stainless Steel Powered Winches

Harken stainless steel winches come standard with durable, lustrous classic stainless finish. For an even more stunning look, they can be polished to a mirror-finish.

As is true with all of the largest Harken winches, our stainless winches provide both power, speed and energy efficiency required for fast, reliable sail handling. Harken project managers are available to help configure optimal gear ratios, motor selection, and power settings, for any application.

Bronze Powered Winches

Bronze finish winches enhance your yacht's classic look, while providing the low-friction pulling power available from Harken's gearing systems. Marine-grade, polished-bronze maximizes durability and corrosion resistance.

All Harken megayacht winches offer a comprehensive range of power and speed that will set you up for fast, efficient sail handling. Your Harken project manager is available to work with you on gear ratios, motor selection, and power settings, ensuring your winches perform at full potential—from superfast line speeds when jibing, to the power to finish a tack in the biggest breeze.

Winch tops can be engraved with your yacht's name.

Carbon Fiber Winches

TP52 © Max Ranchi

Carbon Fiber Winches

Carbon winches are standard in many racing classes and are the choice of performance-oriented fast cruisers.

Winches feature carbon skirts and tops, aluminum drums, and strong composite jaws with one-piece sculpted line guide and peeler. PEEK roller bearings are low-maintenance, reliable, and efficient. They ride in large-diameter cages, allowing more bearings to carry the load. Stainless steel drive gears are strong and durable. The AC versions of the 65.3ST and 65.2ST winches feature titanium gears for extremely high strength-to-weight ratios and exceptional resistance to corrosion.

Carbon winches come with up to three speeds and can be driven by handle, pedestal, or by electric or hydraulic motors. Harken's 50.3STR is the smallest three-speed direct drive self-tailing winch in the industry.

Harken designed the 600.3STR wide-body, self-tailing winch for use on Fast 40+ class boats for use as primary and mainsheet winches. The 600.3STR, which is made from aluminum, is a direct drive three-speed winch that can be driven by handle or pedestal.

Options include self-tailing arms, top cleats, free-spinning or ratcheting base sheave additions, and left-handed rotation.

If class rules dictate, winches are also available in all-aluminum with stainless steel gears.

Carbon Fiber Winches

These powerful carbon winches are aboard large megayachts, performance cruisers, and racing monohulls and multihulls over 18 m (60').

Winches feature carbon skirts and tops, aluminum drums, and strong composite jaws with one-piece sculpted line guide and peeler. PEEK roller bearings are low-maintenance, reliable, and efficient. They ride in large-diameter cages, allowing more bearings to carry the load. Stainless steel drive gears are strong and durable. The AC versions of the 1111PT and 990.3ST winches feature titanium gears for extremely high strength-to-weight ratios and exceptional resistance to corrosion.

Drives are pedestal, electric, or hydraulic. Wide-diameter drums provide extra surface area to hold line securely under high loads. Fewer wraps speed line retrieval when sheeting.

Other options include self-tailing, top cleats, four speeds, free-spinning or ratcheting base sheave additions, and left-handed rotation.

If class rules dictate, winches are also available in all-aluminum with stainless steel gears.

Air Winches

Harken Air winches feature a set of interchangeable gearing kits that give skippers the flexibility to create a perfect blend of speed and power for each day's weather and crew configuration. The winches, which feature a nearly empty middle to reduce weight, were designed for trimming sails on AC foiling cats, IMOCA 60s, AC75s, TP52s and similar Grand Prix boats.

The hollow middle is a first for sailing winches, as are the changeable gear kits. All Harken Air winch models feature interchangeable first-speed and second-speed options. The wide-diameter drums allow fewer wraps, faster trimming, and faster easing. Standard and counter-rotating versions are available. The winches have a low-profile design. Available in four models: 250, 300, 550, and 600.

The 250 and 300 models are designed for boats up to 17 m (56'). The 550 and 600 models are designed for boats up to 24.4 m (80'). The 250 and 550 feature a high-performance ceramic coated white drum. The 300 and 600 versions of the winch feature an anodized aluminum drum.

The 250 and 550 are designed for new builds and are mounted in a unique way: the base of the winch is molded into the deck by the boatbuilder. The 300 and 600 have a standard winch base that can be mounted on either new builds or retrofits.

All models can be driven by pedestal or handle. The 300 can be powered by electric or hydraulic motor.

Racing Pedestals

Racing pedestals allow crew members to trim from powerful standing positions. Customized to meet each yacht's requirements, these pedestal systems can be linked together, allowing crew to work in tandem to produce more power for faster, more efficient maneuvers.

Belt-Drive Pedestals

Harken belt-drive pedestals are molded from carbon fiber and epoxy. Prepreg lamination and autoclave curing maximize stiffness and strength. Components are made of hardcoat-anodized aluminum and 17-4 PH stainless steel. Roller bearings, thermoplastic belt sprockets, and carbon-fiber reinforced drive belts result in the lowest possible weight.

Belowdeck belt-drive pedestals are also offered in above deck/mid-drive styles. These pedestals can be removed and winches converted to manual operation to make more room in the cockpit during a long-distance race or cruise.

MX Pedestals

Harken MX carbon pedestals drive winches on small Grand Prix racers like GP42s, GP52s and Open 60s. The patented overdrive system features two chains inside the pedestal, eliminating the weight of an external overdrive box. Two drive sprockets allow trimmers to select the gear ratio, switching between the 1:1 direct-drive and the fast 1:3 drive chain without reversing grinding directions.

Pedestal handles

Pedestal handles are offered in aluminum or carbon fiber and in single, double, or SpeedGrip styles.

A SpeedGrip pedestal handle is a great solution for solo sailors because it frees up a hand for another task. SpeedGrip winch handles can be special-ordered from Harken.

MX PEDESTAL

MX pedestal

The red shaft of the left button indicates the 1:3 overdrive is engaged. Every turn of the handle produces three turns of the winch.

MX drive sprockets

1:3 chain engaged

1:1 chain engaged

BELT-DRIVE PEDESTALS

Twisted

Twisted belt-drive pedestals eliminate the weight of the 90° gear box when the grinder faces fore and aft.

Straight

A disconnect lever for an above-deck/mid-drive belt pedestal system is available.

Angled

An angled pedestal is customized to optimize the deck layout or tailored to the grinder for maximum comfort.

Air pedestal

The athwartship-mounted Air pedestal has a sculpted hole in the middle, with each leg shaped like a wing—the ultimate in drag reduction.

Wing pedestal

The Wing pedestal mounts fore and aft. It's extremely narrow aerodynamic shape dramatically reduces drag.

Racing Pedestal Drive Components

Gear Boxes

The bevel gearbox is the basic building block of belt-drive pedestal systems. The B606 gear box is designed for up to a six-man, three-pedestal input.

Gearbox housings are CNC-machined from a solid piece of aluminum, hardcoat-anodized for strength and durability. Gears, shafts, and rollers are 17-4 PH stainless steel and are lubricated in a sealed oil bath for minimal maintenance.

Drive Shafts

Harken offers two types of drive shafts. Extruded, splined, aluminum drive shafts may be cut to length. Carbon tubular drive shafts are available with bonded end fittings for U-Joints or spherical CV-Joints. Shaft choice is determined by load, cost, and weight considerations. Your Harken representative can provide details on the best drive shaft for your boat.

Disconnects

System disconnects can be activated with either levers and control lines for hand operation, or a two-position push button for foot activation. The Harken foot button has fewer than 10 components, compared to almost 100 in other buttons, minimizing the possibility of losing or breaking parts. Foot button tops come in red, black, or blue to distinguish functions above deck.

Support Shafts

To space and support a gearbox beneath a winch, Harken supplies tubes for the B404, B606, and B808 series gearboxes. Tubes are made to length from carbon fiber/epoxy with bonded aluminum ends.

B606

Foot button disconnect

Universal Joint

Drive shafts

404 gear box

808 gear box

The 404 gearbox is designed for the TP52 Class. It allows for the power of as many as four crew members using two pedestals to be applied to a single winch drum. The 404 is a small, light and highly efficient bevel box. The 808 gearbox is designed for boats with four or more pedestals on board. It allows for the power of as many as eight crew members. Both the 404 and 808 gearboxes are oil-bath lubricated and have inspection windows.

Carbon wheel

Cantilevered gearbox bracket

Y-box & carbon fiber spinnaker retrieval system

Pedestal-driven, belowdeck carbon wheel ensures high-speed spinnaker retrieval. Optional carbon T-box brackets and cantilevered gearbox brackets hold gearbox in position belowdeck; customized to boat.

Accessories: Carbo OneTouch® Locking Winch Handle

Lightweight and fast-acting, the Carbo OneTouch ball bearing locking winch handle makes grinding winches easy! Racers will maneuver faster and cruisers will have confidence in a reliable and easy-to-use winch handle.

The Carbo OneTouch locks in and out of the winch using its patented locking mechanism and ergonomically-designed grab bar. It only takes one hand to set or release the handle—squeeze anywhere along the grab bar with your palm to unlock; release the bar for a secure lock.

Harken added SpeedGrip handle technology to the OneTouch for fast and efficient winching. Its independent swivel between the ball bearing knob and hand-grip allows fast trimming using the palm for low-loads, and powerful two-handed grinding when loads are high.

At just 590 g (20.8 oz), the Harken Carbo OneTouch is built to be strong but lightweight. The grab bar and main handle are made of the same tough material as our Carbo block line: high-strength, fiber-reinforced composite, UV-stabilized for excellent protection against long-term exposure to saltwater and sun. The handle and grab bar are cross-ribbed and braced for enhanced stiffness.

An aluminum grip rod mates seamlessly to a forged aluminum handle insert to manage bending stresses. The black hardcoat-anodized octagonal drive gear is also integrated into the molding process, resulting in an extremely strong, one-piece structure. Its locking pins are tough 316 marine-grade stainless steel.

OneTouch is a registered trademark of Donald J. Steiner.

Molded urethane knob for comfortable feel and better grip when palming the handle.

Handle features an independent swivel between the knob and handle to keep the wrist straight and arms in the best power position while grinding.

The patented locking mechanism features two stainless steel pins that automatically retract when the handle's full-length grab bar is squeezed, and extend when it is released for a solid, secure lock.

Accessories: Aluminum, Chrome and Bronze Handles

These robust low-friction ball bearing handles match a range of cranking needs for both racers and cruisers. Handles feature a ball bearing grip that efficiently transmits power into the winch. All handles fit international standard winch sockets.

Locking vs. Plain

Lock-in handles are easy to engage and release with a thumb switch. Racers prefer plain handles because they are faster to insert.

Handle Length

254 mm (10") is the most comfortable handle length for most sailors. Published power ratios are based on this length.

203 mm (8") handles grind faster because they swing through a smaller circle, but power is reduced by 20%. 203 mm (8") handles are ideal for smaller boats and light air where speed is more important than power.

SpeedGrip

SpeedGrip handles are designed for the serious racer and are effective in both light and heavy air conditions. The unique grip permits low-load fast cranking using the palm, and powerful two-handed grinding when loads are high. The low-profile B8ASGLP is made for fast one-handed cranking where speed is the concern, not power.

Accessories: Service Kits

You should service your winches at least once during the preseason. However, twice a season is best if your boat lives in salt water. If you race your boat hard, you may want to maintain your winches before every regatta. Keep your winches clean and operating smoothly by flushing frequently with fresh water. Check pawls and springs, bearings, gears, and spindles for signs of wear and corrosion.

For more details, consult the maintenance manual.

Installation manuals and parts lists are available online at www.harken.com.

WINCH Q&A

WHICH PARTS DO I GREASE AND WHICH DO I OIL ON MY HARKEN WINCHES?

Grease all metal gears and roller bearings with Harken Winch Grease. It's highly resistant to salt and fresh water, works in all temperatures, and protects against corrosion. NEVER grease pawls or springs because grease causes them to stick. Instead, lubricate with Harken Pawl Oil for optimal rotation. Radial winches and carbon winches have composite roller bearings that do not need to be lubricated.

Part No.	Description	Includes	Fits winches			
			Radial	Performa	Classic	Custom/Racing*
BK4512	Winch service kit	10 pawls, 20 springs	2-speed: 15 - 70.2, Rewind, UniPower	20	B6 - B980	1000.3

Captive Reel Winches

Electric & Hydraulic

Harken captive reel winches represent a leap forward in captive winch design. The result of years of intense development at Harken Italy's dedicated facility, captive winches are offered in more sizes than ever, with pulling loads of 1.5 to 70 tons, and for boats from 45 feet and up. All sizes are offered with electric or hydraulic motors. Harken's latest captive winches don't just offer an impressive line speed when hauling in—they can ease a line just as quickly and safely when rapid response is needed. Robust and compact, these belowdeck winches keep topsides clear for a clean, uncluttered look. Use for remote line handling: raise/lower halyard, trim/ease mainsheet—all at the touch of a button or a nudge of a joystick for even more fine-tune line speed or trimming control.

Jeanneau 64, 20.1 m (65'11") Philippe Briand design © David Clapp Photography Ltd / Jeanneau

Captive Reel Winches: 1.5 - 3T

Once the domain of only the largest yachts, a new wave of captive winch design and technology has provided the catalyst for the development of winches for boats in the 14 m -18 m (45'- 60') range. Robust and compact, these belowdeck winches keep top-sides clear for a clean, uncluttered look. Use for remote line handling: raise/lower halyard, trim/ease mainsheet—all at the touch of a button.

The winch frame and drum are 6061-T6 hardcoat-anodized aluminum. All parts connected to hydraulic or electrical circuitry are positioned on the same side for maintenance. The screw bearings and gear transmission are also located on this side for easy inspection. Bearings are self-lubricated. The main gearbox is sealed and lubricated with oil.

Electric Versions

Electric captives in 1.5-ton and 3-ton sizes come standard with 12-volt or 24-volt power. The 3T version is also available with a 24-volt high-speed (HS) motor. The winch has a single gear and is managed with push buttons for trimming and easing. A mechanical switch limits the stroke of the feeder to prevent overrides. Winches include a dual-function control box with a built-in load controller that combines two products into one, reducing wiring and connection points by almost half and greatly simplifying installation. The dual-function control box supports the Digital System Switch or analog switches. A mix of switches is not supported.

Hydraulic Versions

Hydraulic 1.5-ton and 3-ton captive winches are driven by industrial-sealed, fixed-displacement motors. The synchronized transmission uses two gear sets (four gears) to drive the twin feeder screws. To change line diameter, the gear sets must be replaced. The feeder transmission's twin feeder screws balance the load on the feeder, allowing line to lie smoothly on the drum—even when slack.

The screw design positions the screw close to the drum, reducing winch size.

Captive Reel Winches: 6 - 70T

Captive winches are offered with pulling loads up to 70 tons with both hydraulic and electric drives for boats from 18 m (60') to the largest megayachts. Drum lengths vary to fit individual project requirements. Captives and tensioners are tested at full load before shipping.

The winch frame and drum are 6061-T6 hardcoat-anodized aluminum with a carbon-fiber gear cover to reduce weight. All parts connected to hydraulic or electrical circuitry are positioned on the same side for maintenance. The screw bearings and gear transmission are also located on this side for easy inspection. Bearings are sealed and lubricated with grease. The main gearbox is sealed and lubricated with oil.

Electric Versions

6T winches and larger run off 500-800V DC systems or 400V AC 3-phase supply. Electric motors on winches 9T and higher are customized for the application. The winch has a single gear and is managed with a joystick for trimming and easing. A gear-and-chain transmission drives the feeder screw, allowing the line to lie smoothly on the drum in a single layer. Tapping into the larger battery banks on modern yachts allows the use of electric captives in sizes previously only available in hydraulic. This provides a quieter, more efficient system. Harken has also developed an innovative push/pull captive that allows a single winch and motor to take the place of two.

Hydraulic Versions

Hydraulic winches 6T and up are offered with variable-speed motors. Custom solutions are available for higher loads. The synchronized transmission uses two gear sets (four gears) to drive the twin feeder screws. To change line diameter, the gear sets must be replaced. The feeder transmission's twin feeder screws balance the load on the feeder, allowing line to lie smoothly on the drum—even when slack. The double screw design positions the screws close to the drum, reducing winch size over similarly configured winches. The tensioner system keeps a constant load on the line to prevent overrides.

ELECTRIC

HYDRAULIC

Hydraulic versions have an open-ended design to reduce weight.

Designed for easy maintenance.

Self-lubricating feeder screw and sheave allow line to lie smoothly on the drum, even when slack.

Two inner magnetic switches factory-set at the feeder's stroke limits prevent overtravel. Two outer fail-safe limit switches automatically engage the brake.

Captive Reel Winches: 6 - 70T

Line storage lengths are guides only. Winches are customized to application. Product not stocked. Contact Harken to request quote and lead time.

Line Tensioners

Harken lightweight line tensioners are available with either electric or hydraulic power. They provide pull to prevent line slack and overrides. Both in-line and through-deck tensioners have powered belts encasing both sides of the line, doubling pull and grip capabilities compared to other versions on the market. Tensioner manifolds are independently plumbed and include a solenoid directional cartridge to optimize tensioner functions. The pay-out circuit includes a pressure-release valve to adjust tensioner pull force. The pay-in circuit includes a relief valve to control drag and to help prevent overrides.

CT1: 90-DEGREE LINE TENSIONER

Use with winches from 3T to 9T.
Sealed roller bearing sheave.
Mounts above or belowdeck.
Symmetrical for right hand/left hand mounting.
Handle 80-degree to 120-degree line wraps.

CT2: IN-LINE TENSIONER

Use with winches from 3T to 25T.
Two independently-powered rubber belts drive line off winch drum.
Carbon-fiber cover keeps tensioner clean and safe.

CT3: 90-DEGREE THROUGH-DECK TENSIONER

Use with winches from 3T to 25T.
300 mm sandblasted sheave handles line load.
Synchronized rubber belt adds additional grip.
Stainless steel, anodized aluminum, or carbon cover.
Waterproof sealed roller bearings.

CT4: 180-DEGREE THROUGH-DECK TENSIONER

Use with winches from 3T to 18T.
300 mm sandblasted sheave handles line load.
Synchronized rubber belt adds additional grip.
Stainless steel, anodized aluminum, or carbon cover.
Waterproof sealed roller bearings.

CT6: 90-DEGREE THROUGH-DECK TENSIONER

Use with winches from 25T to 35T.
300 mm sandblasted sheave handles line load.
Synchronized rubber belt adds additional grip.
Stainless steel, anodized aluminum, or carbon cover.
Waterproof sealed roller bearings.

CT5: 45-DEGREE THROUGH-DECK TENSIONER

Use with winches from 3T to 25T.
45° line deviation minimizes line stress at high loads.
Stainless steel, anodized aluminum, or carbon cover.
Waterproof sealed roller bearings.

CT7: 90-DEGREE THROUGH-DECK TENSIONER

Use with winches from 50T to 70T.
300 mm sandblasted sheave handles line load.
Synchronized rubber belt adds additional grip.
Stainless steel, anodized aluminum, or carbon cover.
Waterproof sealed roller bearings.

Line tensioner removes line slack when loading and unloading the spool.

Tensioners can be installed above deck, belowdeck, or through-deck.

Flush-deck mounting

Belowdeck mounting

Product not stocked. Contact Harken to request quote and lead time.

HYDRAULICS

Integral Hydraulic Backstay Adjusters

Harken's integral hydraulic backstay adjuster provides the power to optimize sail shape quickly. The cylinder features a built-in, double-acting pump that delivers oil when the handle is both pushed and pulled. This moves oil through the system twice as fast as single-acting pumps on other integrals.

Assemblies include a hardcoat-anodized aluminum cylinder and pump, valve, and stainless pump handle with three attachment options: pin installs handle permanently; O-ring secures handle in socket, but is not permanent; nonlocking handle installs without O-ring and roll pin. All pins and plugs are stainless steel. Cylinders include a clevis on both ends. Standard eye-jaw toggles fit all Harken cylinders.

The pressure-release knob turns clockwise to close and pump, counterclockwise to release. When closing the pump, the knob cannot be over-tightened by hand, preventing damage to the valve. Release speed depends on how far open the knob is turned. Pressure relief is factory set to prevent crew from over-tensioning the backstay.

Harken integral backstay adjusters come in four sizes to fit boats with 5 - 10 mm (7/32 - 3/8") wire—approximately 9 - 18 m (30 - 60').

Harken recommends attaching a toggle to the cylinder's bottom clevis to accommodate stay movement. Standard eye-jaw toggles fit all Harken cylinders.

*For pin center length open add stroke length to pin center length closed.

**Rod ends (forks) included in weights.

‡ Max relief setting is 4500 psi/310 bar.

Relief valves are preset to limit tension to recommended rigging load. Each cylinder provides a specific max pull force.

HYDRAULIC CYLINDERS

Harken offers a full range of hydraulic cylinders to handle mast, sail, and keel controls on cruising and racing yachts. Components are designed to reduce weight and size, and to increase structural strength for years of high-stress use in corrosive marine environments. They are available with -6 to -195 rod to fit everything from 9 m (30') racer/cruisers, to Grand-Prix racers, and 46 m (150')-plus megayachts. Harken-certified service centers can be found in countries around the world.

Materials:
For properties
see pages 16-17.

6061-T6 aluminum:
Hard Lube-anodized*
cylinder tube

316 stainless steel:
Polished cylinder
tube

Titanium:
Cylinder tube

XM-19 stainless steel:
Rod; pins

*Clear-anodized aluminum is available, but provides less protection than Hard Lube anodizing.

Stands up to sun, salt, and time

- Cylinder tubes in mirror-polished stainless steel, Hard Lube-anodized aluminum, or titanium.
- High-strength XM-19 stainless steel rods and pins.
- Durable, low-friction polyurethane seals and bronze-filled PTFE piston seals.
- O-rings in nonabsorbent polyurethane seals for consistent fit.

Variety of cylinder types

- Single-acting; double-pull; locking; boom vang. Single-acting cylinders have air-spring returns, but can be ordered in push, push/pull, and pull/pull custom versions.
- Custom lengths available.

Selection of rod end fittings

- Standard clevis jaw for ends included.
- Blocks and different eye types available; see alternate end fittings pages 234 and 236.
- Smooth anti-snag clevis pins protect rigging and crew.

DO NOT use Harken equipment for human suspension unless product is specifically certified and labeled for such use.

Hydraulic Cylinders

Maximum air return force ratio is 10:1, not included in pull force calculation. Precharge is a maximum of 100 psi (6.9 bar).

For pin center length open add stroke length to pin center length closed.***Max relief setting is 5000 psi/345 bar, recommended setting is 4000 psi/275 bar.

*For pin center length open add stroke length to pin center length closed. **Rod ends (forks) included in weights. ***Max relief setting is 5000 psi/345 bar, recommended setting is 4000 psi/275 bar.

Locking Cylinders

Harken locking cylinders feature an adjustable mechanical lock threaded onto the rod that physically blocks rod movement and securely fixes its position independent of the boat's pressure system. They are commonly used by large cruisers on extended passages to safely lock the rod during pressure release and to act as a safety backup for the hydraulic system. In addition, a long-stroke cylinder is often used during the mast stepping process to lean the mast forward and hook up the furlers. After commissioning, the cylinder's mechanical lock is engaged, limiting the stroke for sailing.

Adjustable lock prevents rod movement during pressure release.

For pull forces, see cylinder with corresponding bore and rod diameter on page 232.

*Specify rod and clevis end fittings by adding the appropriate suffix to end of part number. See page 234.

For pin center length open add stroke length to pin center length closed. *Rod ends (clevis) included in weights.

Ordering Single-Acting & Locking Cylinders

To order use the chart below. Standard cylinders are black hardcoat-anodized with clevises on both ends. Clevises, marine eyes, barrel pin eyes, and blank end fittings are offered in black hardcoat-anodized aluminum, clear-anodized aluminum, or mirror-polished stainless steel finishes. Lashing eyes and low-profile lashing cylinder end fittings are available in black hardcoat-anodized aluminum. For optional materials and fittings, replace the last three letters of the part number with your selections.

Standard Cylinder Part Number

(Standard cylinder is black hardcoat-anodized aluminum with rod clevis and cylinder-end clevis)

Stroke length (mm)

Materials

B = Black hardcoat-anodized aluminum

C = Clear-anodized aluminum

S = 316 stainless steel

Rod end fittings

C = Clevis: Cylinders come standard with the clevis on rod ends.

L = Lashing eye: This soft attachment lashing has soft radii and can accept a small amount of off-axis loading.

M = Marine eye: These rigging fittings are designed to fit a standard toggle or clevis with the same size pin.

N = No fitting

Cylinder end fittings

C = Clevis: Cylinders come standard with the clevis on cylinder ends.

B = Barrel-pin eye: The barrel pin eye is used when a few degrees of side-to-side articulation is needed, allowing slight self-alignment when the cylinder is tensioned or unloaded.

L = Lashing eye: This low-profile lashing end attaches to the frame of the boat (or mast butt). Eliminating the toggle, clevis, bracket, and pins not only saves weight but space, allowing more stroke on the cylinder.

M = Marine eye: These rigging fittings are designed to fit a standard toggle or clevis with the same size pin.

X = Blank: Cylinders that attach at only one end are fitted with a blank on the unused end of the cylinder.

Double-Pull Cylinders

Double-pull cylinders have rods on both ends and are used with mainsheet travelers or jib sheet car systems to easily adjust loaded sails. As oil is pumped into the cylinder, the rod pulls the traveler while the other rod eases. Reverse the process and the eased rod pulls the other way. Delrin® isolators separate the cylinders from the metal elements of the hull to prevent corrosion.

What makes Harken double-pull cylinders unique is the way they are installed on the boat. To take the cylinder off the mounting brackets for service, the user simply removes four screws, leaving both brackets in place.

Double-pull cylinders do not come with end fittings on the rod because of the variety of cylinder functions. On page 234, you'll find a selection of end fittings to choose from. Fittings are sold separately.

Disassembled endcap with Delrin isolator.

Double-Pull Cylinder Part Number

Cylinders are made to order. Specify desired stroke length in millimeters and optional end fittings when ordering.

*Overall cylinder length equals zero stroke length plus two times the desired stroke.

**Overall bracket spacing equals zero stroke bracket spacing plus the desired stroke.

Cylinder Blocks & Toggles

Rod End Blocks

These reverse-purchase blocks allow you to move loaded line while keeping cylinder length as short as possible, saving weight and space. They can be used anywhere a reverse purchase is needed: cunningshams, stay deflectors, travelers, and athwartship jib systems. Blocks are rigid when mounted to the rod. They are available in single, single with becket, and double versions for reverse purchases from 1:2 to 1:4.

Eye/Jaw Toggles

An eye/jaw toggle provides a cylinder with two axis points of articulation to reduce wire, rod, and end fitting fatigue. Toggles are machined from a solid bar of highly-polished 316 stainless steel and are available in 11 - 44 mm (7/16" - 1 3/4") to match cylinder pin sizes. Eye/jaw toggles are commonly sold with Harken integral backstay cylinders as well as standard cylinders used for standing rigging.

HYDRAULICS Q&A

WHY AREN'T THE SHEAVES ON YOUR CYLINDER ROD END DOUBLE BLOCKS STACKED?

Although slightly longer than blocks with stacked sheaves, our reverse purchase rod end blocks allow the sheaves to align the load directly with the cylinder, preventing premature wear and seal failure.

Maximum working load is equal to maximum pull force for appropriately sized cylinder.

*Can be used as becket block.

Boom Vangs

Hydraulic vang change the height of the boom to help control sail shape. They also function as a topping lift to hold the boom up when reefing, and to keep it level when the sail is flaked. Harken offers a full range of vang cylinders. The HYCV single-acting gas return is the standard vang used for most boats up to approximately 23 m (75'). For larger yachts with heavier booms Harken offers more powerful push/pull double-acting vangs. The standard double-acting vang is the HYCZ push/pull vang.

Megayacht Antibuckling Double-Acting Boom Vangs

High-tech hulls and rigging plus larger roller furling booms have dramatically increased the compression loads on boom vangs of the increasingly larger modern day megayacht. This overload can result in the cylinder rod buckling, causing the vang to malfunction. Harken engineers solved this issue by eliminating the load on the rod and transferring the load to the outer housing tube. Harken is in the process of redesigning these larger vangs in order to offer more sizes and improved features. Please contact Harken for more information on the new design.

Ordering Boom Vangs

All vangs are made to order. Specify desired PCLC (pin center length closed) in millimeters rounded to the nearest 10th. Standard vangs are black hardcoat-anodized aluminum with rod clevis and cylinder end clevis.

Grand-Prix Cylinders

Used for mast, sail, and keel controls, Harken Grand-Prix cylinders were specifically designed to withstand the stresses of high-intensity racing. Their longevity and reliability are evident in the selection of high-quality materials and components.

Cylinder housings are machined from aerospace grade titanium. High-strength stainless steel rods provide superior strength and corrosion resistance. 10,000 psi cylinders are available upon request.

Cylinders are offered with clevis jaws and a variety of fittings. Available in push, pull, pull/pull and push/pull styles.

Grand-Prix cylinders are only intended for systems with a vigorous maintenance schedule, as they are built for extremely high loads at a minimal weight.

All Grand Prix cylinders are made to order

To order, specify stroke length in millimeters, and rod and cylinder end fitting options. Contact Harken for weights and volumes.

HYDRAULIC CONTROL VALVES & MANIFOLDS

Harken offers a complete line of extremely lightweight, low-profile valves and manifolds for hydraulically-controlled systems. Harken standard valves are half the weight of most styles, with Grand-Prix versions sculpted to further eliminate unnecessary material. An independent pressure-relief function in each valve gives crew the ability to match hydraulic power to the maximum working load of individual mast and sail controls. An adjustable flow control integrated into each valve fine-tunes the speed of release.

High-strength, lightweight

- Valves, manifolds, standard valve panels corrosion-resistant, hardcoat-anodized aluminum; stainless fittings for strength.
- Lightweight composite handles textured, contoured for secure grip.

Valves with independent relief, release, and flow match system loads

- Each valve has independent pressure relief for individualized pressure adjustment.
- Each valve has integrated adjustable flow control for fine-tuning release speed.
- Minimum flow rate of 8 L/min (2.1 gpm).
- Pressure relief and release combined into one part saves weight.

Handle socket

Valve handles fit in four directions for easy operation

- Inverted handles on double-sided manifolds have same open/closed positions; rotation direction for easy access.
- Valve stems have tapered shaft to fit handle socket for secure, tight fit.

Service available worldwide

- Service and repairs should be done by certified hydraulic technician.
- Valve seal and repair kits available worldwide.
- 3-micron high-pressure filter to protect equipment recommended.

Options

- Standard valves and manifolds handle up to 5,000 psi; sculpted Grand-Prix valves and manifolds handle up to 10,000 psi.
- Valves offered with short and long shafts: short shaft fits 3 mm-thick deck/panel; long shaft 4 mm to 25 mm-thick deck/floor.
- Double-acting valves for traveler controls, other functions using twin or double-acting cylinders.
- Inline relief valves: control maximum system pressure; inline relief valves work with any manual system, manifold-mount reliefs fit Harken manifolds.
- Remote dump valves: ease sail controls from helm, rail, other positions on boat; use as quick release or regulate speed with optional adjustable flow control.

- Valve panels: offered with/without gauges for Harken manifold configurations.
- Valve panels in clear- or hardcoat-anodized aluminum, stainless steel, and clear-coated carbon.
- Single- and double-sided manifolds accommodate up to nine valves for multiple functions.

Standard valves have -4 JIC port adapters. Grand Prix valves have plugs in all ports.

Ordering Valve Assemblies

Use this guide to configure your valve assembly order. Standard valve assemblies come with the “J” port fitting option, and Grand-Prix assemblies come with “X” port fitting. For other fitting options, replace the last letter of the part number with your selection.

Valve Assembly Part Number

HYA2000RGXXXJ

Hydraulic valve assembly

Valves on manifold:

2__ = Number of single-acting valves on top

_0__ = Number of double-acting valves on top

0 = Number of single-acting valves on bottom

__0 = Number of double-acting valves on bottom

Relief:

X = No relief

R = Manifold relief

I = In-line relief

Valve/manifold type:

G = Grand Prix/sculpted

P = Standard

Number of gauges:

X = No gauges

G = One gauge for each valve

Panel type:

X = No panel, short shaft

T = No panel, long shaft

B = Black hardcoat-anodized aluminum panel

C = Clear-anodized aluminum panel

F = Carbon fiber panel

S = 316 stainless steel panel

Pump:

MVP-1 Single Control & MVP-4 Multi Control Panels

Harken single and multifunction valve panels are used by larger cruisers to control systems like backstays, boom vang, and outhauls. Available as kits, single-function panels are offered with 2-liter reservoirs, multifunction panels with 4-liter reservoirs. Both panels come with pumps, handles, gauge, pressure relief, and release functions. Panels come standard with a 1- or 2-speed pump. A 3-speed pump is available on request.

The single-function valve is a simple on/off system that can operate the cylinder remotely, allowing the user to tension the backstay cylinder from the cockpit. Multifunction panels can operate up to four cylinders remotely, with a selector handle choosing 1 of 4 functions. Valve panels feature an easy-to-read gauge and a finger-controlled knob for pressure release.

Single and multifunction panels come standard in black hardcoat-anodized 6061-T6 aluminum. Panels also offered in clear-anodized aluminum, stainless steel, or carbon fiber.

Kit includes multi- or single-function control panel, pump handle, reservoir, low-pressure hose, and suction filter.

Compact Control Panel

Harken's Compact Control Panel provides sailors with a single-speed, single-function panel pump for remote cylinder operation. This no-frills model is clean and uncomplicated, with the same quality you expect from a Harken hydraulic product. The double-acting pump delivers oil when the pump handle is pushed and pulled, moving oil efficiently through the system. The panel's pressure-release knob cannot be over-tightened by hand and cause damage to the valve. Pressure relief is factory-set at a maximum 5000 psi to prevent crew from over-tensioning the system. The panel's small footprint takes up very little space, providing a variety of mounting options. The wide bolt pattern on the pump minimizes stress and stabilizes the pump.

The kit comes with pump, valve manifold, 2-liter tank, handle, filter, and hose.

Available in black hardcoat-anodized 6061-T6 aluminum.

Back of valve panel

HYACXPXB1J	Compact single-function panel/hardcoat-anodized/1-speed	9	229	6 1/2	165	2 9/16	65	5	2.27

Pump Handles

Handles mount at the angle you choose. Standard round-tipped handles are made of knurled 6061-T6 hardcoat-anodized aluminum and fit most marine pumps. Grand-Prix versions are available in carbon fiber. An optional square-tipped style allows the handle to be rocked 5 degrees laterally from the pumping direction to store against the cockpit wall.

Hydraulic Pumps

Harken offers 1-, 2-, and 3-speed pumps for hydraulic systems. Our 2- and 3-speed pumps deliver oil faster and more efficiently than other pumps on the market. When a preset point is reached, the pump automatically shifts to the next speed. The 1-speed pump is a simpler alternative, but features the same high-quality components as the other systems. Use 1- and 2-speed pumps for smaller and midsize hydraulic systems; 3-speed pumps on systems with high-volume, high-pressure requirements. Pressure relief on 1- and 2-speed pumps is factory-set to a maximum of 5000 psi. Mounting patterns for all pumps are identical, making upgrades easy.

Bolt holes in the hardcoat-anodized 6061-T6 aluminum pump housing are threaded with stainless steel inserts to prevent corrosion around the stainless bolts. An optional adhered isolation plate improves load distribution even more by transferring torque directly to the mounting surface rather than the bolt holes. Piston shafts and rocker arms are machined from 17-4 PH stainless steel. Pumps have 7-degree splined shafts to ensure a tight fit and to allow the handle to be mounted at the sailor's preferred angle.

Optional isolation plates made of extremely resilient G10 improve load distribution by transferring torque directly to the mounting surface.

Hydraulic Rotary Pumps

Harken offers three sizes of multi-speed, pedestal-driven rotary pumps for Grand-Prix race boats 13.7 - 30.5 m (45 - 100'). They deliver oil faster, more efficiently, and with higher shift points than other pumps of comparable sizes. The 10 and 20 cc pumps shift from 1st to 2nd gear both automatically and manually, with automatic shift points determined by the maximum output of the grinders. If fewer crew are grinding, and not enough power is generated to reach the automatic shift point, pumps can be shifted manually—the 20 cc pump by simply reversing the pedestal handles; the 10 cc pump by using a pull-cord attached to a lever.

Pumps are made of corrosion-resistant Hard Lube-anodized aluminum, with aluminum, titanium, and stainless steel components. All pumps include a non-return valve on the outlet to prevent backflow.

10 cc Pumps

A female spline attaches these pumps directly to the pedestal and is compatible with Harken's MX. Six double-stepped pistons save weight and feature connecting rods for piston return instead of springs. Three fasteners provide quick connect/disconnect mounting. Spinning these pumps in either direction results in the same displacement.

20 cc Pumps

These patented pumps have either a 30 mm male input shaft or 25 mm female spline. Two banks of six pistons feature spring returns and large volume output. Spinning these pumps in the opposite direction at a pressure lower than the automatic shift point manually shifts them into second gear. Please specify clockwise (CW) or counterclockwise (CCW) when ordering.

26 cc Pumps

Harken's electrically-shifting, three-speed rotary pumps deliver up to 15.9 L/min at 600 rpm. Four fasteners easily mount these pumps to a two-speed planetary gearbox with several ratio options to deliver up to six hydraulic displacements on one pedestal. Offset radial pistons ensure these pumps will deliver a very smooth and efficient flow of oil to hydraulic functions. Spinning these pumps in the opposite direction will engage the speed-up ratio in the gearbox, or deliver the pedestal ratio. Please specify clockwise (CW) or counterclockwise (CCW) when ordering.

Female splines attach directly to Harken's MX pedestal for a tight connection.

Male input shafts attach pumps to bevel boxes or pedestals and can mount remotely.

Hydraulic Reservoirs

Harken offers pressurized carbon fiber/composite reservoirs and vented blow-molded reservoirs for manual hydraulic systems.

Pressurized Reservoirs

All Harken pressurized reservoirs have translucent sections in the reservoir walls, making it easy to monitor oil levels. Pressurized reservoirs require very little maintenance and are cleaner than those that use ambient air pressure. They can be installed in the bilge rather than at pump level to provide a low center of gravity.

Grand-Prix Pressurized Reservoirs

Harken offers four sizes of Grand-Prix pressurized reservoirs (20-, 17-, 13-, and 10-liter) to suit any Grand Prix need. They are among the lightest in existence.

Reservoirs can be built with up to three ports on each end, customizable to whatever application is required. Port sizes are offered from -16 JIC down to -6 JIC. One-way return-line check valves, supply-line shutoff valves, and high quality regulators are available to meet specific needs.

Custom sizes and configurations are available. Contact Harken.

Vented Reservoirs

These 2- and 4-liter blow-molded reservoirs are used for smaller Grand Prix systems and production yachts. Reservoirs feature a vented cap to stabilize tank pressure and prevent leaks. Translucent materials allow oil levels to be easily monitored. 10 mm (3/8") hose barbs are welded to the reservoir for supply and return hoses.

Hydraulic Accessories

Harken offers a complete range of high-quality kits and components for the professional installation, service, and maintenance of your hydraulic system.

Filters

Filtration is essential to the health and longevity of your hydraulic system. Harken recommends the 40-micron suction/return filter between the reservoir and the pump as well as an extremely fine 3-micron filter between the pump and the valves. The 40-micron filter has an anodized aluminum body with a removable, cleanable, and replaceable sintered bronze element. The high pressure 3-micron filter is made from electropolished 17-4 PH stainless or titanium. It has a replaceable paper element and can handle pressures up to 10,000 psi. -4SAE ports allow the high-pressure filter to accept any combination of fittings and adapters.

Pressure Transducers

Pressure transducers use the onboard computer to convert hydraulic pressures of up to 10,000 psi into tons or other load units. Standard lightweight versions and super lightweight Grand Prix versions are available.

Pressure Gauges

Pressure gauges, offered as an alternative to electronic transducers, can be mounted into the valve panel or plumbed remotely into a pressure line. Stainless steel 40 mm (1 1/2") cases are filled with glycerin to dampen needle movement.

Plumbing

Harken has a complete line of high-pressure and low-pressure plumbing for manual hydraulic systems. All high-pressure fittings and adapters are machined from stainless steel. Hoses can be sent to you assembled and preflushed.

Seal Kits

Seal kits are available for all valves, cylinders, and pumps. Kits include all normal wear items such as O-rings, seals, and nylon tip set screws.

Repair Kits

Repair kits are available for all valves, cylinders, and pumps. They include everything in the seal kit with the addition of select machined components that may require occasional replacement.

HAWE Tool

The HAWE tool is used for removing and reinstalling the check valves included in valve and pump repair kits.

Hydraulic Oil

Our hydraulic oil was chosen specifically for Harken high-pressure hydraulic systems. Its moisture-resistant formula features unique anti-wear additives that inhibit corrosion and provide high levels of thermal and oxidation stability to enhance lubricant performance and extend equipment life.

HYOIL22QUART: one-quart bottle.

Hydraulic Hose

Harken offers a range of hydraulic hose for high- and low-pressure oil delivery. After assembly, all high-pressure hoses are flushed clean of contaminants before shipping.

High-Pressure Hose

The HYZHP520N-3, -4, and -6 are general-purpose pressure hoses used for oil delivery to cylinders and other motor functions. They feature durable nylon tubing reinforced with high-strength aramid fiber and an abrasion-resistant polyurethane cover. Fittings sold separately. Available in cadmium-plated steel or, for greater durability, stainless steel.

The HYZHP590-3 hose is engineered for high-pressure and low-volumetric expansion, and offers precise cylinder control. The copolyester tubing is reinforced with aramid fiber and high-tensile steel wire. The cover is high-strength polyurethane for abrasion resistance. Fittings sold separately. Available in cadmium-plated steel or, for greater durability, stainless steel.

The HYZHP471TC-6 is used in power units or for power applications such as winches, furlers, and windlasses. The inner tube is synthetic rubber reinforced with two braids of steel wire. The synthetic rubber cover is abrasion resistant. Fittings sold separately. Available in cadmium-plated steel. Stainless steel available upon request.

Low-Pressure Hose

The HYZHT30R9-6 is an extremely lightweight hose used aboard race boats. The elastomer inner tube with high-strength Nomex®/Kevlar® braided cover increases abrasion resistance. The field-attachable fitting is lightweight alloy. Fitting sold separately.

The HYZHT7212-6 is a tank-line hose. The light, flexible hose is made of Nitrile rubber with braided neoprene reinforcement. Hose-barb fittings allow an easy-push connection.

For complete assemblies including hose contact Harken.

Through-Deck Gland

The Harken Through-Deck Gland provides a waterproof passage for hydraulic hose. Unlike other glands, Harken's model can be easily installed by one person topside. The gland's doughnut-shaped base secures over a predrilled hole in the deck with high-strength bonding tape. The urethane seal and top cap is put on the hose before attaching the swage fitting. The swage fitting passes through the deck/base, and the top cap is threaded to the base for a watertight fit.

Comes in black hardcoat-anodized 6061-T6 aluminum. Fits HYZHP520N 5 mm (3/16"), 6 mm (1/4"), and 10 mm (3/8") hose sizes.

For complete assemblies including hose contact Harken.

Cross-section with hose

Choosing Hydraulic Systems

1. Cylinders

Load and Pin Sizes: Cylinder size is determined by cylinder load and pin size. Stroke length is based on cylinder function. See page 232 to select cylinder. Double-pull, locking, and boom vang cylinders are also available. See charts for loads, pin sizes, and stroke lengths.

Alternate End Fittings: Choosing the correct end fittings for your cylinders is critical. See page 234 for end-fitting options.

2. Control Valves

Select valves based on sailing style and valve style, type, and functions. Choose between multifunction panel and individual valves, Standard or Grand-Prix styles. Single or double-acting valves are based on cylinder type.

Individual Valve Assemblies: Individual valve assemblies are dependent on how the boat is sailed. Multiple control locations? Single control locations? Choose valve, manifold configurations, and panel types. See page 243.

Multifunction Valve Panels and Single-function Panels: Choose plate materials. Single and multifunction panels come with a 2-speed pump, pump handle, and reservoir. See page 244.

Remote Dump Valves: Are remote dump valves required?
Example: vang cylinders.

3. Pumps & Handles

Individual valves require a separate pump. How many? 2-speed or 3-speed? Choice depends on oil volume, how fast oil must move, and pressure required. Select adequate handle. See pages 245-246.

4. Reservoirs

Reservoir Type: Reservoir type is determined by the amount of oil needed and pump height relative to the reservoir. Use a pressurized reservoir if it is mounted more than 1.5 m (5') vertically below the pump. Vented reservoirs are adequate under 1.5 m (5').

Reservoir Size: As a general rule, select reservoir size by adding up cylinder volumes and multiplying by 2.

5. Accessories

Filters: Harken highly recommends a high-pressure filter between the pump and valves to keep valves working at peak performance. Also recommended: a suction filter for the pump to prevent debris from entering the system.

Gauges: Remote analog gauges and digital transducers available.

Fittings: Plumbing fittings, additional spares, blanking plates, and spare parts available. See page 249-250.

Standard System

Grand Prix System

DC HYDRAULIC POWER SYSTEMS

When designing a powered system, we first gather information on the number of functions as well as flow and pressure requirements for each. Every powered system is different. Harken is committed to providing systems designed specifically to account for flow, pressure and other performance requirements of each project. We also talk to the client about how the boat will be used to assure the system will perform as expected.

Harken DC hydraulic systems power functions including cylinders, vang, lifting keels, winches, furlers, windlasses, and small bow thrusters. The system is comprised of three main components:

- **The power unit** includes motors and pumps to deliver oil. We offer a variety of options for different flow and pressure needs. All power units include return filtration, motor temperature sensors, and tank level sensors.
- **Valves** direct and deliver oil to hydraulic functions. Our family of modular cartridge manifold valves stack together for an extremely flexible system. These zero-leak valves have flow and pressure controls as well as pressure-relief.
- **The electrical control box** is the brain of the system. On-deck push-button controls turn valves and pumps on/off. Our latest control boxes all include a small PLC controller to map inputs to outputs. Boxes come pre-wired. Simply plug M12 cables to connectors on the outside of the box.

We provide hands-on service for all Harken hydraulic power systems, and we look forward to serving our customers beyond their expectations.

Please contact us with any of your hydraulic powered system needs. We will be happy to provide detailed specifications and quotation.

High-flow, low-pressure power units are ideal for powering winches, furlers, small windlasses, and thrusters.

Modular cartridge manifold valves.

High-pressure, low-flow compact power units are perfect for powering cylinder functions.

Kim Deede **Customer Account Specialist**

Harkenite Since 2013

Kim Deede
has worked
in Customer Service

in Pewaukee for 6 years – processing orders for Harken’s domestic and international customers, and then making sure the orders ship properly.

One of those customers is Captain Greg Fordon of the Volvo 70 *Il Mostro*, which recently completed an elapsed time record between Chicago and Mackinac Island in 17 hours, 59 minutes and 49 seconds.

“He made me feel pretty cool that I was helping him,” Kim said. “I love seeing my customers do amazing things, and being part of it!”

Kim likes working at Harken. “We can wear jeans and shorts in the summer,” she says. “And, we have our annual Harken Sail Day on Lake Michigan.”

When she’s not at the office, Kim enjoys yoga, biking, reading, hiking, and cooking for her family.

SAILKOTE™

FOR EVERYTHING THAT SLIDES

High Performance Dry Lubricant*

Use on hatches, drawers, sliding doors, sail tracks, mast tracks and slides, fishing reel components and fly line, sails, battens and telltales, slider cars and tracks

- Repels water, dirt, salt and contaminants
- Reduces drag in air and water
- Clean, dry, and easy to use
- Lasts up to 10 times longer than additives, oil, or wax-based lubricants

* Available at US and international dealers

HULLKOTE™

FOR EVERYTHING THAT SHINES

High Performance Speed Polish

Use on fiberglass, metal, plexiglass, and painted surfaces

- Cleans, polishes, and protects
- Reduces drag and repels water
- Environmentally friendly citrus base
- Long-lasting, high-gloss finish
- Superior UV protection

ANTIFOUL ALTERNATIVE

FOR EVERYTHING BELOW THE WATERLINE

Environmentally Friendly Antifoul Polish

Use on hulls, outdrives, and propellers

- Helps prevent below-the-waterline marine growth and slime from adhering for weeks
- Reduces drag and increases efficiency
- Biodegradable, non-metallic, non-leaching

ONEDROP™

FOR EVERYTHING THAT ROLLS

Ball Bearing Conditioner

Use on ball bearing traveler cars and battcars

- Repels salt, dirt, and other deposits
- Protects, lubricates, and conditions bearing surfaces
- Reduces friction so balls roll freely and evenly, greatly improving performance
- Only one drop needed

Worldwide Limited Warranty

COVERAGE. HARKEN warrants that each HARKEN product, when properly used and maintained, will be free from defects in material and workmanship from the date of receipt of the product by the final customer. HARKEN products are covered by two different kinds of warranties, on the basis of the purchaser and use made of them.

1. The Private Customer Warranty

2. The Professional Customer Warranty

THE LIMITED PRIVATE CUSTOMER WARRANTY. This limited warranty applies to all Harken products purchased for final use by private individuals only and installed on boats used exclusively for recreational purposes. Harken products installed on boats used for any other purpose or by any other entity are covered by the limited PROFESSIONAL CUSTOMER WARRANTY. The Owner's sole and exclusive remedy under this limited PRIVATE CUSTOMER WARRANTY for original defects in materials or workmanship of a HARKEN product shall be the repair or replacement, in HARKEN's sole discretion, of the defective part or component, at no charge to the owner of the product.

THE LIMITED PROFESSIONAL CUSTOMER WARRANTY. This limited warranty applies to all Harken products purchased for final use by or on behalf of any entity other than a private individual (such as by corporations, partnerships, competitive race groups, etc.) or installed on boats used for any purpose other than recreational use, such as for hire, charter or other professional or commercial events or activities. Such Professional Customers may include, but are not limited to, America's Cup Syndicates, international competitive syndicates, racers in transoceanic and globe-circling events, one-design racers with boats 40 feet and up racing in major competitive and international competition.

The Owner's sole and exclusive remedy under this limited PROFESSIONAL CUSTOMER WARRANTY for original defects in materials or workmanship of a HARKEN product shall be the repair or replacement, in HARKEN's sole discretion, of the defective part or component, in accordance with the terms of this warranty.

WARRANTOR. For products originally sold in the United States, the limited warranty for the products is supplied by HARKEN, INC.. For products originally sold in the European Union, the limited warranty for the products is supplied by the dealer who sold the product through the Harken Distributors in that country. For products originally sold in the rest of the World, the limited warranty for the products is supplied directly by the Harken Distributors in that country. When "HARKEN" is mentioned throughout this Limited Warranty, it refers to the entity as defined in this paragraph.

OWNER – NON-TRANSFERABLE WARRANTY. This warranty is made by HARKEN with only the original purchaser of the product and does not extend to any third parties. The rights of the original purchaser under this warranty may not be assigned or otherwise transferred to any third party.

WARRANTY TERM. The limited **PRIVATE CUSTOMER WARRANTY** covers any original defects in material or workmanship manifested **within five (5) years** of the date of receipt of the product by the final customer.

However, the warranty terms under the limited **PRIVATE CUSTOMER WARRANTY** for the following products are as indicated below by the date of receipt of the product by the final customer:

1. **Jib Reefing and Furling systems** are warranted for seven (7) years.
Hydraulic and Electric Furling systems are warranted for five (5) years.
Electric furling motor, switches, control boxes, and breakers are warranted for two (2) years.
2. **Reflex furler for asymmetric and code zero sails, associated adapters, cable terminals/clamps, and fairlead kits**, are warranted for three (3) years. **Reflex torsion cable** is warranted for one (1) year.
3. **Carbo Racing Foils** are warranted for three (3) years.
4. **Winches and handles, cylinders, valves, pumps, reservoirs, control panels** are warranted for three (3) years. Electric/hydraulic winch motors, **captive reel winches**, hydraulic power units, switches, control boxes, and breakers are warranted for two (2) years.
5. **Custom products, pedestals, gearboxes, push buttons, drive shafts, carbon fiber products, and/or high performance applications** of standard catalog products for extraordinary use applications are warranted for two (2) years.
6. **Harken gloves, sunglasses, and related accessories** are warranted for two (2) years from date of purchase. Warranty excludes normal wear and tear.
7. **Ropeye® products:** contact Ropeye.com for warranty terms.

The limited **PROFESSIONAL CUSTOMER WARRANTY** covers any original defects in material or workmanship manifested within 12 months of the date of receipt of the product by the final customer.

NOT COVERED. Neither the limited **PRIVATE CUSTOMER WARRANTY** nor the limited **PROFESSIONAL CUSTOMER WARRANTY** applies to, nor shall HARKEN

have any liability or responsibility for, damages or expenses relating to defects caused by misuse, abuse, failure to install, use, maintain, or store the HARKEN product as specified in the warranty booklet, service booklet, manuals, catalogue, or other literature available from HARKEN.

Neither the limited **PRIVATE CUSTOMER WARRANTY** nor the limited **PROFESSIONAL CUSTOMER WARRANTY** applies to, and neither HARKEN shall have any liability or responsibility in respect of, damages or expenses relating to:

- defects in material or workmanship that did not exist when the product was first delivered;
 - defects in material or workmanship that are manifested outside the warranty period;
 - defects which are not reported to HARKEN within sixty (60) days of discovery;
 - a product that has been altered or modified from factory specifications;
 - damage or deterioration of cosmetic surface finishes, including cracking, crazing, discoloration, or fading;
 - accidents, misuse, abuse, abnormal use, improper use, lack of reasonable or proper maintenance or storage;
 - installation, wiring, service, or repairs improperly performed or replacement parts or accessories not conforming to HARKEN's specifications;
 - use exceeding the recommended and permitted limits or loads of the product and/or the vessel on which the product is installed;
 - normal wear or deterioration occasioned by the use of the product or its exposure to the elements;
 - besides HARKEN's Hoister products used to store watercraft and bicycles, any use outside, other than or besides normal sailing or sailboat applications;
 - ropes, lines, LOUP® soft attachments, buckles, and webbing;
 - clear coat finishes on carbon fiber;
 - loss of time, loss of use, inconvenience, travel expense, costs related to procuring any substitute boat, transportation costs, towing costs, any incidental or consequential damages arising out of the non-use of the boat, or compensation for inconvenience or loss of use while the boat is being repaired or otherwise not available, or other matters not specifically covered hereunder;
 - the costs to remove, disassemble, or re-install the product;
 - the costs or expenses associated with transporting the product to and from HARKEN or a HARKEN dealer
 - hauling out, storage, and relaunching of the boat on which the product has been installed, even where this is necessary to carry out the warranty service.
- The limited **PROFESSIONAL CUSTOMER WARRANTY** does not cover, nor shall HARKEN have any liability or responsibility in respect of, damages or expenses relating to, the following products and/or components:
- pawls and pawl springs in winches;
 - components and gears in titanium;
 - washers and spacers;
 - winch drum grip;
 - ball bearings, roller bearings, thrust bearings;
 - winch handles.

PROCEDURE. In the event of a defect covered by this limited warranty, the Owner shall contact one of HARKEN's worldwide Distributors (there is a list of them on the www.harken.com site). If the product was originally sold in European Union the Owner shall contact the dealer that sold the product. To obtain warranty service for or replacement of your HARKEN product, your specific and detailed claim must be reported to and received by HARKEN, in writing, in accordance with the terms of this warranty and within the applicable warranty period. Also provide your name, address, phone number, original sales receipt, a description of the application of the product, and an explanation of the defect and conditions under which the product was used. If the examination of the product and the warranty claim reveals that the defect is not covered by this warranty, you will be contacted and advised of the cost of repair of your product. If you accept this estimate, the product will be repaired outside of this warranty.

DAMAGES OR OTHER COSTS. Except as expressly provided by this warranty, **HARKEN SHALL NOT BE RESPONSIBLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES OR OTHER COSTS, WHETHER THE CLAIM IS BASED IN CONTRACT, TORT, OR OTHERWISE, including but not limited to any costs, taxes, fees, levies, or other expenses imposed by any location in which the product was originally sold.** The foregoing statements of warranty are exclusive and in lieu of all other remedies. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so this limitation or exclusion may not apply to you.

Worldwide Limited Warranty

DISCLAIMER. ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND ALL IMPLIED WARRANTIES ARISING FROM A COURSE OF DEALING, USAGE OF TRADE, BY STATUTE OR OTHERWISE, IS HEREBY STRICTLY LIMITED TO THE TERM OF THIS WRITTEN LIMITED WARRANTY. This Agreement shall be the sole and exclusive remedy available to the Owner with respect to this product. In the event of any alleged breach of any warranty or any legal action brought by the purchaser based on alleged negligence or other tortious conduct by HARKEN, the Owner's sole and exclusive remedy will be repair or replacement of defective materials as stated above. No dealer and no other agent of HARKEN is authorized to modify, extend, or enlarge this warranty.

APPLICABLE LAW. This warranty is governed by the laws of the State of Wisconsin for all products originally sold outside European Union. This warranty is governed by the laws of the Member State of the European Union where the product was originally sold. The exclusive jurisdiction and venue for any court action commenced by you under or relating to this limited warranty or any implied warranty(ies) shall be decided in the Courts of Waukesha County, Wisconsin or in the competent European Union State Member Court if the product was originally sold in European Union.

In the event HARKEN prevails in any court action, the claimant shall reimburse HARKEN for the expenses, including attorney fees and expenses of litigation, reasonably incurred by HARKEN in defending against such claim.

OTHER RIGHTS. Claimant's acceptance of delivery of the warranted HARKEN product constitutes acceptance of the terms of this limited warranty. This warranty gives specific legal rights, and claimant may also have other rights under the laws of the jurisdiction involved.

ENTIRE AGREEMENT. This document contains the entire warranty given by HARKEN in respect of your product and supersedes any and all oral or express warranties, statements, or undertakings that may previously have been made. Any and all warranties not contained in this warranty are specifically excluded. There are no terms, promises, conditions, or warranties regarding your product other than those contained herein. HARKEN specifically does not authorize any person to extend the time or scope of this warranty or to create or assume for HARKEN any other obligation or liability with respect to HARKEN products.

June 2008/112616.1

General Warnings and Instructions

Sailing is an exciting sport that can provide hours of enjoyment for you, your family, and friends. However, there are risks inherent in the sport, as well as with the equipment involved, that must be respected in order to avoid an accident, damage to your vessel, personal injury, or death.

WARNINGS AND INSTRUCTIONS. You must carefully read, understand, and follow all of the warnings and instructions provided by Harken in order to avoid an accident. These warnings and instructions can be found on the equipment, in its packaging, in our brochures, on our website, or through our customer service department.

HYDRAULIC EQUIPMENT WARNING. Pressurized hydraulic cylinders can be dangerous and if handled improperly may explode, possibly causing an accident, damage to your vessel, personal injury or death. Cylinders should only be serviced by a thoroughly trained and equipped hydraulic technician following the instructions in the manual.

TRAINING AND EXPERIENCE. Even though Harken equipment appears simple and easy to operate (as intended by our design), our equipment should never be used unless you have a sufficient level of training and experience in sailing in general and with the equipment in particular. The amount of training and experience depends on a number of factors, including the size and type of your vessel, the weather conditions, and the task you are trying to complete. If you have any doubt whatsoever about your training or experience, please do not use the equipment. Please contact Harken or seek additional training.

AVOID ACCIDENT & INJURY. Regardless of your skill level, in order to avoid an accident, damage to your vessel, personal injury, or death:

1. Loads on hardware can be significant, and shock loading from heavy winds or seas can quickly multiply that load to extremely high levels. Maximum line diameter is a guide to sheave groove size and not intended to provide the maximum working load of the block. All persons selecting, installing, or maintaining Harken gear must be aware and cautious of such loads.

Select appropriate Harken hardware by using the loading formulas and charts provided in the Harken catalog or online at www.harken.com. Always confirm your selection with a rigging professional or contact Harken directly.

2. Never, under any circumstances, exceed the capacity or **Maximum Working Load (MWL)** of any piece of equipment. The maximum working load may be found in our catalog, on our website, or through our technical service department. Loads above the MWL can cause the equipment to fail suddenly and unexpectedly.

The Breaking Load (BL) is the load at which a product is likely to fail. It is much higher than the highest load a product should ever experience, and should not, under any circumstances, ever be considered in selecting equipment. It is published for informational purposes only.

3. Harken hardware and winches shown in the Harken catalog and the harken.com website are designed and engineered for use on sailing boats for normal sailboat applications for rigging. **Do not use Harken equipment for human suspension unless product is specifically certified and labeled for such use.** Aloft rigging and maintenance must be left to rigging professionals only. For non-sailing applications consult the HarkenIndustrial.com website and consult with experts at Harken regarding product certification prior to using for human suspension.

4. Keep fingers, hands, hair, loose clothing, gloves, and tools away from moving parts.

5. If you are securing any equipment to the vessel with screws or other fasteners, be sure you are installing the screw into solid structure, or that you use anchor bolts, and that the attachment is sufficient to hold the anticipated load. Otherwise, the screw could become loose over time, or otherwise fail unexpectedly, resulting in an accident.

6. NYLOK® nuts must not be used after being removed three times. When you replace shackles and fasteners, use the correct Harken parts to maintain the proper strength.

7. Always have all components of your vessel, down to the smallest pulleys, inspected for wear, corrosion, or deterioration at least yearly, and replace as necessary.

8. Before manipulating any piece of equipment, be sure that all persons and objects are clear of the path of movement of all reacting components.

9. As part of your maintenance procedures and to keep your equipment in optimum working order, frequently flush it with fresh water.

10. Always wear a personal flotation device and/or harness while on board any vessel, and especially while manipulating equipment.

11. Always be sure all safety equipment and electronics are in good working order before you set out on your journey.

12. For general boating safety information, visit the maritime organization in your sailing destination country (such as the United States Coast Guard at www.uscgboating.org).

V™	block, soft-attach block

Maintenance

Harken equipment is designed for minimal maintenance. However, some upkeep is required to give the best service and comply with the Harken limited warranty. Harken installation manuals are available at no charge online at www.harken.com or by contacting a Harken dealer.

Always flush frequently with fresh water and periodically inspect all products for damage.

Do not let deck hardware come in contact with teak cleaner or other caustic solutions as this causes discoloration and damage to the finish.

Product	General Information	Inspection	Cleaning	Lubrication	Fasteners
Small Boat and Midrange Blocks	Tape cotter rings to prevent snagging. Do not leave heavy loads on blocks when not in use as this may slightly deform the bearings. Normally bearings will return to their proper shape after rotation, but an initial resistance to rolling may be felt.	1	4 5		11
Big Boat Blocks	Big Boat bearings are resistant to deformation, but we recommend releasing heavy loads on any hardware when not in use.	1	4 Black Magic Air blocks disassembled, solution on rollers		12
Cams			4 Apply to bearings		11 On cam screws
Travelers and Battcars		1	4 Apply to bearings	7 On balls 8 Slider cars only	11 On bolts 13
Furling	Refer to the owner's manual for detailed maintenance instructions.	2	4 Apply to bearings		11 On Cruising foil clamp screws 14 On foil screws MKIV and ESP
Winches	Refer to the owner's manual for detailed maintenance instructions. Over application of grease can cause salt and water deposits to become trapped in the winch. Clear drain ports of sealants or grease. Lubricate pawls with Harken Pawl Oil. Do not grease pawls.	3	4 Plastic parts 4 Winch top 6 Metal parts	9 On gears 10 On pawl	12 On socket bolt 13

1 Inspect frequently: shackles and shackle posts for signs of corrosion, cracks, or elongation. Inspect: lashings and loops for UV damage, wear, or chafe. When replacing loops, lashings, or shackles, use Harken parts to maintain the proper strength.
2 Inspect frequently: wire terminals, turnbuckle components, toggles, shackles, clevis and cotter pins below and inside drum assembly for signs of loosening, corrosion, or cracks.
3 Check for wear and corrosion: Check pawls and springs, bearings, gears, and spindles.
4 Clean: Keep your equipment clean and free-running by frequently flushing with fresh water. Periodically clean with mild detergent and water solution. Spin sheaves, rotate cams, and roll cars back and forth to distribute soap solution evenly.
5 Clean: with Scotch Brite® pad on Classic block sideplate and stainless steel strap.
6 Degrease: Remove grease with degreaser. Harken recommends environmentally friendly citrus degreasers.
7 Condition: Use only a single drop of McLube OneDrop™ ball bearing conditioner. Too much oil attracts dirt.
8 Lubricate: Dry lubricants such as McLube® Sailkote, dry PTFE, and dry silicon sprays which will not attract dirt may be used on slider cars.
9 Grease lightly: with Harken winch grease.
10 Lubricate: winch pawls with a drop of Harken Pawl Oil. Do not grease winch pawls.
11 Adhesive: Blue Loctite®. Temporary adhesive. Can be removed without heating.
12 Anti-seize: Coat stainless fasteners that pass through aluminum blocks with an anti-seize compound such as Tet-Gel®.
13 Replace: lock nuts after the third removal.
14 Adhesive: Red Loctite®. Semi-permanent adhesive. Can be removed with heat. Electric heat gun will not raise temperature enough to break adhesive seal.

McLube is a registered trademark of McGee Industries, Inc. Loctite is a registered trademark of Henkel AG & Company KGaA. Scotch Brite is a registered trademark of 3M Company. Tet-Gel is a registered trademark of Ultra Safety Systems, Inc.

Genoa Lead Cars

Pinstop Slider: A pinstop slider car on ball bearing track is recommended for cruising boats that might upgrade to adjustable ball bearing cars.

Multi-Track: Use an adjustable car for the #1 and #2 genoas. Use a pinstop car for the #3 and #4 jibs. Adjust the forward car with a pinstop slider.

Barbarhauler: Use this low-profile system on racing boats with nonoverlapping jibs like the Farr® 40 and One Design 35. An inhaul is used to control slot size.

Beachcat Jib Controls: This jib traveler is used to haul the jib sheet block outboard for slot adjustment on multihulls up to 6.4 m (21').

Crossbow: The Crossbow is a self-tacking jib system designed for high-performance dinghies, skiffs, and catamarans under 6 m (20').

Traveler

2:1 Cam on Car: This system features cleats on adjustable arms that can be angled. On flush-deck boats, face cleats down the length of the track. On boats with seat backs, angle the cleats forward or aft.

Windward Sheeting: The windward sheeting traveler lets crew pull the car above the centerline without releasing the leeward control line. Tack and the car stays in the same position, ready to be pulled to the new windward side.

2:1 Remote Cleat: Use this 2:1 system on flush-deck boats like the J/24 where crew sit outboard of the traveler and loads are nearly vertical.

Standard 3:1: This system, with cleats on the track, is used on boats under 10.7 m (35').

Standard 4:1: This 4:1 system is used on moderately-sized cruising and racing boats. Control blocks and cleats mount on track ends.

2:1 with Dedicated Winch: Install this system on big boats when winches are used to adjust the traveler.

4:1 Remote Cleat: If the traveler is mounted ahead of the companionway, place the cleats at the aft-edge of the cabin house.

3:1 Remote Cleat: When the crew sits above the traveler, lead control lines up the cockpit sides to a convenient cleat on the coaming.

Underdeck Traveler Control: Racing boats often keep decks clean by running the traveler tackle belowdeck. This system has a 6:1 purchase that exits at a central control pod forward of the wheel or tiller, which allows the mainsheet trimmer to easily adjust the traveler. Popular on boats like the Farr® 40.

4:1 Dodger: This system works well with a dodger.

4:1 Fiddle: This 4:1 tackle is the most common system on boats under 8.5 m (28').

6:1 Reeved Right Angle: Boats with mainsails to 35 m² (375 ft²) often use a 6:1 system.

8:1 Beachcat: This 8:1 purchase handles high mainsheet loads on Beachcats up to 6 m (20').

4:1 Swivel Base: Position the swivel base block off the traveler car to allow mainsail adjustment without dragging the car to windward in light air. To avoid tightening the leech, curve the track ends up.

4:1/16:1 Gross/Fine: This powerful gross-trim/fine-tune cascading system allows crew to use the 4:1 gross-trim for most trimming and the 16:1 fine-tune for precise adjustments.

4:1/16:1 Double-ended Fine Tune: This 4:1/16:1 system uses a dinghy-like double-ended tackle that locates the sheet ends on the cockpit sides.

6:1/24:1 Gross/Fine: This 6:1/24:1 cascading system is used on boats with end-boom sheeting and mains as large as 25.5 m² (275 ft²) and end-boom sheeting.

6:1/24:1 Cascaded: This 6:1/24:1 system is used on boats with mains as large as 25.5 m² (275 ft²) and end-boom sheeting.

Mainsheet

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
- Midrange: 8.8 - 10.4 m (29 - 34')
- Big Boat: 10.7 - 12.8 m (35 - 42')

7:1/28:1 Gross/Fine: This gross-trim/fine-tune system is found on racing multihulls where it is desirable to split the gross-trim from the fine-tune. Placing the fine-tune in the boom provides a very clean system that the trimmer can get a hold of and put his weight into. The powerful cascading fine-tune portion is used to haul the boom in that last little bit.

4:1 with Dedicated Winch: This system moves the traveler over the companionway to clean up the cockpit. A favorite on cruising boats.

5:1 with Dedicated Winch: This system is popular on cruising boats with cabin top travelers. The sheet leads forward to the gooseneck and then down and back to a winch on the aft edge of the cabin top.

2:1 with Dedicated Winches: This simple double-ended system lets the mainsheet run freely through the blocks which allows the traveler car to move easily. The trimmer makes sail adjustments from the high side.

Admiral's Cup 2:1 with Dedicated Winches: In this system, the traveler is independent of the mainsheet so it rolls freely. The sheet leads forward along the boom before it turns down and aft to winches. Used on race boats like the Farr 40.

3:1 with Dedicated Winch: Many large boats use this simple 3:1 system. A block on deck turns the sheet to a winch.

Mainsheet

Two-Speed Mainsheets

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

Diagram Ref.	Description	Small Boat Part No.	Midrange Part No.	Big Boat Part No.

B	Cross block	400	400	—
C	Double	2634	2634	—
D	Cam base	402	402	—

2:1/4:1 Swivel Base: This system is often found on boats like J/24s where a center-mounted swivel base is desired.

3:1/6:1: This 3:1/6:1 two-speed system is used on end-boom sheeting and mainsails up to 22.3 m² (240 ft²).

3:1/6:1 Swivel Base: This 3:1/6:1 system allows the mainsheet trimmer to be positioned anywhere on the boat. A great setup for sportboats.

4:1/8:1 Swivel Base: Similar to the 3:1/6:1 swivel base system, but uses a 4:1/8:1 tackle for more power.

Boom Vangs

Part numbers represent hardware most commonly used.

Typical boat length:

Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

C	Single	349	2652	2600
D	Cam cleat	241	240	240

4:1 V-Jam: This simple 4:1 self-cleating vang is used on small dinghies.

4:1 Fiddle: The basic 4:1 fiddle block vang is commonly used on dinghies and small keelboats.

8:1 Cascaded Fiddle: A doubling block increases the purchase of the vang to 8:1. The load on the fiddle blocks is halved so they can be used safely on larger boats.

4:1 Cascaded Kicker: This rigid rod vang utilizes a simple 4:1 tackle. The rod also serves as a topping lift for the boom. Used on cruising and racing boats.

6:1 Double-ended Cascaded Kicker: Many racers rig the vang with a double-ended control line led down each side of the boat.

Outhaul Systems

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
- Midrange: 8.8 - 10.4 m (29 - 34')
- Big Boat: 10.7 - 12.8 m (35 - 42')

A	Clew block	371	—	—
B	Traveler	G222B	1648	3076
C	Through-deck	1200	1202	1203

2:1 Internal: Suitable for dinghies or small keelboats. A flexible cable shackles to the sail and enters the boom through a wire block. Placing a block aft of the cleat allows the crew to pull from a variety of positions.

4:1 External Cascade: A simple external outhaul system. A cascade of two 2:1 tackles produces a 4:1 advantage.

5:1 Internal: This 5:1 internal outhaul is popular on small offshore boats.

6:1 Internal: A 6:1 internal outhaul system is popular on small-to-medium-sized offshore boats using a traveler car to carry the clew of the mainsail.

2:1 Furling Main: Mainsails that furl into the mast are loose-footed and usually have a ball bearing outhaul car that rides the length of the boom. The outhaul starts at the car, leads through the clew block on the sail, back to the sheave on the car, and into the boom where it leads to a winch.

Cunninghams

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
- Midrange: 8.8 - 10.4 m (29 - 34')
- Big Boat: 10.7 - 12.8 m (35 - 42')

B	Cheek	350	2644	2606
C	Cam cleat	468	150	150
D	Bullseye	339	339	237

4:1 Cascaded: This simple 4:1 system leads aft to the cockpit. A favorite on small keelboats and daysailers.

8:1 Cascaded: The most basic cunningham is a self-cleating 8:1 tackle positioned at the mastbase.

4:1 Double-ended Cascaded: This system is easy to adjust from the trapeze. It's easy to rig and unrig. Popular on smaller beachcats.

12:1 Cascaded: This simple 2:1 purchase is attached to a 6:1 cascade for a 12:1 system. Used on larger racing and cruising boats.

6:1 Double-ended Jib Downhaul: Small boats like J/24s use a double-ended genoa cunningham system to adjust draft from the weather rail.

Mastbase & Cabintop Blocks

Part numbers represent hardware most commonly used.

Typical boat length:

Small Boat: 6.7 - 8.5 m (22 - 28')
 Midrange: 8.8 - 10.4 m (29 - 34')
 Big Boat: 10.7 - 12.8 m (35 - 42')

B	Mastbase	1986	1988	1990
C	Mastbase	3002	3002	3002

1 Halyard: This simple system leads principle halyards aft. Used by boats under 9 m (30').

3 Halyards: Larger boats use special mastbase halyard lead blocks. Lines are routed out to deck organizers then aft to stoppers and winches. Stand-up blocks on a base are sometimes preferred for their complete articulation, but they hold halyards higher off the deck than specialized mastbase blocks.

6 Halyards: Modern race boats lead halyards and control lines straight aft through deck organizers so they can be used on either cabintop winch.

Over-the-Top: Special "over-the-top" blocks are required to route lines over an outside corner like the front of a doghouse or coaming.

Spinnaker

Part numbers represent hardware most commonly used.

Typical boat length:

Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

	Multihulls	2.4 - 4.3 m (8 - 14')	4.6 - 6 m (15 - 20')	6.4 - 9 m (21 - 30')
A	Single	2625	2625	2680
B	Single	2146	2148	2151

Standard Sheets: Masthead rigs to 8.5 m (28') and fractional rigs to 9.7 m (32') use one pair of lines which lead to turning blocks at the transom. Tweakers bring the guy to the deck near the point of maximum beam to provide additional control over the spinnaker pole. One foreguy line is appropriate for these boats.

Standard Sheets & Guys: Offshore boats over 9 m (30') use separate sheets and guys. The sheets lead to turning blocks at the transom, while the guys lead to blocks at the point of maximum beam and then to a winch. A double-ended foreguy adjusts from either side of the boat.

Asymmetrical on Sprit: Boats with asymmetrical spinnakers and retractable (or removable) bowsprits are rigged with a tack line leading through a block on the end of the sprit, and aft to a cleat or stopper. Two sheets attach to the clew of the sail, with the lazy sheet leading aft ahead of the headstay, over the sprit, and outside the shrouds and sheets.

Continuous Line: Beachcats install two Carbo auto ratchets on each side of the boat to manage high spinnaker sheet loads. Use 57 mm ratchets on catamarans up to 6 m (20'). Use 75 mm ratchets on multihulls to 9 m (30').

Spinnaker Pole Handling & Halyards

Part numbers represent hardware most commonly used.

Typical boat length:

Small Boat: 6.7 - 8.5 m (22 - 28')
 Midrange: 8.8 - 10.4 m (29 - 34')
 Big Boat: 10.7 - 12.8 m (35 - 42')

C	Bullseye	237	—	—
D	Eyestrapp	137	—	—

2:1 Spinnaker Pole: This system allows the inboard end of the pole to be moved under load. It features a continuous adjuster line and 2:1 controls.

3:1 Spinnaker Pole: This adjustable system features 3:1 controls for more power.

Spinnaker Halyard through Spar: Smaller offshore boats often mount a cam cleat below the spinnaker halyard exit so crew can jump the halyard and cleat it to the mast when setting the spinnaker. The cam also holds the line should the sail fill prematurely.

Pole Launcher: Many racing boats have asymmetrical spinnakers and retractable bowsprits. This system features a launcher line on top of the pole, with strong shockcord on the bottom to automatically retract the pole when the launcher line is uncleated.

Backstay Adjuster

Part numbers represent hardware most commonly used.

Typical boat length:
Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

Double-acting Hydraulic Backstay Adjuster				
A	Backstay adjuster	—	HC1025110345BCC.NG HC1040160385BCC.NG HC1035130345BCC.NG HC1045160385BCC.NG	

6:1 Right Angle: This simple 6:1 system is used on small cruising boats with a single line or wire backstay.

12:1 Cascaded: This cascading 2:1/6:1 system provides a 12:1 purchase and is used on small racer/cruisers and daysailers.

4:1 Split Backstay: This 4:1 system is used on small keelboats with split backstay systems. Pinching the wires together tightens the backstay and increases headstay tension to flatten the genoa, decrease weather helm, and stabilize the rig in heavy air.

8:1 Split Backstay: A more powerful version of the split backstay adjuster uses a doubling wire running through a wire block for a purchase of 8:1.

6:1 Double-ended Split: This double-ended split backstay system leads lines forward to cam cleats mounted just ahead of the helmsman so adjustments can be made from either side of the boat.

Double-acting Hydraulic Backstay Adjusters: These powerful systems deliver oil when the handle is pushed and pulled, delivering oil twice as fast as single-acting pumps—an excellent choice for racer/cruisers.

Mainsail Reefing

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

Diagram		Small Boat	Midrange	Big Boat
Ref.	Description	Part No.	Part No.	Part No.
Dual Line				
A	Cheek	2644	6237	3220
B	Single	2650	2600	3215
C	Mastbase block	222	1986	1988
D	Bullseye	339	237	237
Lazy Jacks				
A	Lazy Jack kit	252	253	254

Dual Line: This dual-line system is common on boats 9 m (30') and larger. Position blocks so line pulls down and out to keep the sail flat and prevent lateral loads on the luff rope or luff sliders.

Lazy Jacks: Lazy Jacks contain mainsails during reefing and dousing. They work exceptionally well with full-battened mains, but are also used with conventional sails.

Self-Tacking Jibs & Staysails

Part numbers represent hardware most commonly used.

Typical boat length:

- Small Boat: 6.7 - 8.5 m (22 - 28')
Midrange: 8.8 - 10.4 m (29 - 34')
Big Boat: 10.7 - 12.8 m (35 - 42')

Standard Self-tacker: This system is often used on course racing keelboats like Solings. The traveler track is bent in a radius equal to the distance from the headstay to the sheeting point along the LP of the sail.

2:1 Self-tacker: Self-tacking jibs are popular because they keep the foredeck clean.

Self-tacker on Jib Boom: Self-tacking jibs and staysails work well with furling systems and jib booms. This system features two “sheets”—one controls the in and out movement of the sail much like an outhaul. The other controls the boom.

Metric Conversions

This catalog shows both imperial and metric measurements. In most cases, the metric dimension shown is calculated from the imperial measurement and rounded to a whole number. For example, 5/16" is generally shown as 8 mm, while an exact conversion would be 7.9375 mm. When referring to a line diameter, it is sufficient to approximate the conversion. In cases where a dimension is critical, exact metric dimensions are shown. For example, a clevis pin for a furling unit with a diameter of 1/2" is shown as 12.7 mm.

Loading Formulas

Block Loading vs Angle of Deflection

Load on a block is a combination of the load on the line passing through the block, plus a block-loading factor, which is determined by the angle by which the block turns the sheet. For example, a foot-block that turns a sheet 180 degrees will see a load equal to twice the load on the sheet. A deck organizer, which turns a halyard only 30 degrees, will see just 52 percent of the load on the halyard.

Boat Type

Most load formulas assume a medium displacement monohull, but you can easily correct for other boat types. Multihulls and boats with canting keels or water ballast have great form stability and speed and will often carry sails very high in the apparent wind speed, so calculations must be done with this wind speed in mind. ULDBs are typically tender and often change sails or reef quite early, so loading may be done at relatively low wind speeds. For example, a modern trimaran may carry its blade jib in 25 knots of wind at speeds over 15 knots for an apparent wind of nearly 40 knots, whereas a ULDB will probably remove its #1 genoa at about 15 knots of apparent wind.

Angle of deflection	Load factor	Angle of deflection	Load factor	Angle of deflection	Load factor
30°	52%	90°	141%	150°	193%
45°	76%	105°	159%	160°	197%
60°	100%	120°	173%	180°	200%
75°	122%	135°	185%		

Genoa System Loading

Because wind speed is squared, it is the most important variable and can greatly influence loading. Wind speed (the apparent wind) should be calculated for the specific sail being analyzed. For example, the #1 genoa on a 7 m (25') boat might only be carried in 15 knots of wind, while the #3 blade on a Maxi-boat could well be carried in 40 knots.

To calculate loading on a genoa lead car, multiply sheet load by the load factor of the sheet. Most #1 genoas will deflect about 45 degrees, while a #3 genoa may deflect 75 degrees or more.

Lead car adjuster tackle load is dependent on the angle of deflection of the sheet in the lead car, but is generally assumed to be 0.3 of lead car load when deflection is 45 degrees and .05 of lead car load when deflection is 60 degrees.

Genoa sheet load			
English		Metric	
$SL = SA \times V^2 \times 0.00431$		$SL = SA \times V^2 \times 0.02104$	
SL	Sheet load in pounds	SL	Sheet load in kilograms
SA	Sail area in square feet	SA	Sail area in square meters
V	Wind speed in knots	V	Wind speed in knots

Formulas are for typical cruising monohulls with fixed keel and Dacron® sails, sheets, and halyards. For all other types, please contact Harken for technical assistance in calculating loads.

Mainsheet System Loading

The formula for mainsheet loading is not as widely accepted as that for genoa sheet loads and should only be used as a rough guide for offshore boats from 9 - 18 m (30 - 60').

Traveler car adjuster load is generally considered to be 0.2 times car load.

Mainsheet load			
English		Metric	
$ML = E^2 \times P^2 \times 0.00431 \times V^2$ $(\sqrt{P^2 + E^2}) \times (E - X)$		$ML = E^2 \times P^2 \times 0.02104 \times V^2$ $(\sqrt{P^2 + E^2}) \times (E - X)$	
ML	Mainsheet load in pounds	ML	Mainsheet load in kilograms
E	Foot length of main in feet	E	Foot length of main in meters
P	Luff length of main in feet	P	Luff length of main in meters
V	Wind speed in knots	V	Wind speed in knots
X	Distance from aft end of boom to mainsheet attachment point in feet	X	Distance from aft end of boom to mainsheet attachment point in meters

Formulas are for typical cruising monohulls with fixed keel and Dacron sails, sheets, and halyards. Assumes standard roach of 7.5%. For large roach sails such as "flattops" multiply calculated load by the percentage of the mainsail roach. If a sail has 25% roach, multiply the calculated load by 1.25. For all other types, please contact Harken for technical assistance in calculating loads.

Rig Dimensions

The following abbreviations are often used to describe various measurements on a sailboat. Precise technical definitions exist for each abbreviation, but the following is a list of simple descriptions:

LOA	Length overall - overall tip-to-tip length of the boat	I ₂	Height of staysail halyard above deck
LWL	Length waterline - length of waterline of the boat	J	Base of the foretriangle measured from the front of the mast to the intersection of the forestay and deck
DWL	Design waterline - theoretical waterline length of boat as opposed to LWL, which is actual waterline length	J ₂	Base of staysail triangle
BMX	Beam maximum - width of the boat at the widest point	P	Luff length of the mainsail
BWL	Beam waterline - widest beam of boat at the waterline	E	Foot length of the mainsail
I	Height of the foretriangle measured from the top of the highest sheave to the sheerline	LP	Shortest distance from headstay to the clew of the jib
